

DEPARTMENT OF ENERGY
FY 1996 CONGRESSIONAL BUDGET REQUEST
ENERGY SUPPLY, RESEARCH AND DEVELOPMENT

OVERVIEW

ER LABORATORY TECHNOLOGY TRANSFER

The Energy Research Laboratory Technology Transfer Program (ER-LTT) focuses on opportunities at the Energy Research (ER) laboratories for increased collaborations with industry to link the ER science program and laboratories to technology applications, projects, and partnerships. ER-LTT projects rely upon "market pull" wherein the further development and application objective is defined by U.S. industry, rather than the Department. The program supports cost-shared collaborations where industry and the Department leverage their resources on a research and development project, reducing the risk to a point where industry will pursue the improved product or process development. The ER-LTT funds collaborations that build upon and are consistent with the technologies and missions resident in the ER laboratories, in the following six focus areas: advanced materials; advanced computing; advanced manufacturing; electronics and instrumentation; biotechnology and health; and energy and environment. The collaboration projects at each laboratory are focused in three of these critical technology areas where the laboratory's core competencies are strongest. The program's vision is to make the National laboratories user friendly sources of research and development collaboration with industry.

The program is designed to more effectively transfer technology from ER laboratories by supporting industry-driven, cost-shared Cooperative Research and Development Agreements (CRADAs). The program provides support for the industry collaboration office at each of the ER laboratories to develop and implement small quick response projects, particularly with small and minority businesses, for large multi-year CRADAs, and for major government-industry partnerships. The major partnerships will typically involve other agencies and cross major Departmental programs. They are jointly planned and managed by the industry and laboratory partners.

The FY 1996 budget request proposes to fund the industry collaboration offices, multi-year CRADAs, and one ongoing major partnership (American Textiles Consortium [AMTEX]), continue support of the Advanced Computational Technology Initiative [ACTI], and initiate support for one new major partnership (the PARTNERSHIP For A NEW GENERATION OF VEHICLES [PNGV]).

The performance measures used for the ER Laboratory Technology Transfer program include: (1) the number of small businesses helped by the industrial collaboration centers; (2) the number of industry-driven collaborations; (3) the share of project costs funded by industry; and (4) the results developed through CRADAs.

Authorization: P.L. 95-91, "Department of Energy Organization Act" (1977), Section 209

a/ Share of Energy Supply, Research and Development general reduction for use of prior year balances assigned to this program. The total general reduction is applied at the appropriation level.

b/ Excludes \$559,000 which has been transferred to the SBIR program and \$19,000 which has been transferred to the STTR program.

c/ Technology Utilization is no longer a subprogram of the ER Laboratory Technology Program. It is now the Technology Partnerships program in the Office of the Deputy Under Secretary for Technology Partnerships and Economic Competitiveness. See separate budget for this new program.

SUMMARY OF CHANGES

ER Laboratory Technology Transfer

FY 1995 Appropriation.....	\$ 57,513
- Adjustment.....	<u>- 613</u>
FY 1995 Adjusted.....	\$ 56,900
- Technology Utilization, previously a subprogram of the ER Laboratory Technology Transfer program, is now Technology Partnerships, a new separate program in the Office of the Deputy Under Secretary for Technology Partnerships and Economic Competitiveness.....	- 1,000
- Decrease funding for CRADA project support.....	- 3,624
- Decrease funding for AMTEX partnership.....	- 3,500
- Initiate support for PARTNERSHIP FOR NEW GENERATION VEHICLES (PNGV).....	<u>+10,000</u>
FY 1996 Congressional Budget Request.....	<u>\$ 58,776</u>

KEY ACTIVITY SUMMARY

ER LABORATORY TECHNOLOGY TRANSFER

I. Preface: ER Laboratory Technology Transfer

This subprogram fulfills the legislative mandate in the Energy Policy Act of 1992 to more effectively transfer research and technology and supports the policies and guidelines of the Office of Science and Technology Policy. The program supports industry-driven, cost-shared research and development projects that focus on the results of the Energy Research science programs at the laboratories that are of interest to the private sector. The industry collaboration projects at each ER laboratory are focused in technology areas where the laboratory's core competencies are strongest. In addition to quick response projects, personnel exchanges and technical assistance that supports small business particularly, the program supports major industry-driven partnerships with entire industry sectors that involve other agencies and cross major Departmental programs (e.g., AMTEX, ACTI and PNGV).

KEY ACTIVITY SUMMARY

ER LABORATORY TECHNOLOGY TRANSFER

I. Preface: Technology Utilization

The Technology Utilization subprogram is responsible for activities associated with the coordination, implementation and evaluation of the DOE's enhanced technology transfer program. As a voice for technology commercialization stakeholders, this subprogram serves as an advocate for technology transfer both internal and external to the Department. Activities include:

- Providing analytical and other support to the activities of the Technology Transfer Committee (TTC) made up of representatives from other parts of the department. The TTC is expected to further inter-program coordination through formation of a number of ad hoc and standing subcommittees and working groups. In addition to supporting the TTC, the Technology Utilization subprogram will also provide analytical and other support to the activities of a number of ad hoc task forces and working groups associated with Departmental technology transfer, commercialization and utilization activities.
- Providing analytical and other support as part of DOE contribution to activities with other Federal agencies, state and local governments, trade associations, universities, the Federal Laboratory Consortium and other relevant groups outside of DOE on technology transfer, commercialization and utilization activities.
- Developing, in coordination with Program Secretarial Officers, a Department-wide technology transfer education and training program, outreach activities and a performance measurement and reporting system.
- Performance of cross-cutting technology and utilization studies and pilot activities.

II. A. Summary Table: Technology Utilization

Program Activity	FY 1994 Adjusted	FY 1995 Adjusted	FY 1996 Request	\$ Change
