ENERGY SUPPLY, RESEARCH AND DEVELOPMENT  
ACTIVITIES

(Including Transfer of Funds)

For expenses of the Department of Energy activities including the purchase, construction and acquisition of plant and capital equipment and other expenses incidental thereto necessary for energy supply, research and development activities, and other activities in carrying out the purposes of the Department of Energy Organization Act (Public Law 95-91), including the acquisition or condemnation of any real property or any facility or for plant or facility acquisition, construction, or expansion; purchase of passenger motor vehicles (not to exceed [18] 21 for replacement only), [\$1,347,048,000,] \$1,909,710,000, to remain available until expended; [in addition \$684,158,000 shall be derived by transfer from Uranium Supply and Enrichment Activities provided in prior years and shall be available until expended; and of which \$84,100,000 which shall be available only for the Center for New Industrial Materials; the Center for New Industrial Materials; the Center for Nuclear Imaging Research; the Energy Research Complex; Saint Christopher's Hospital for Children - Energy Demonstration Project; Center for Excellence in Education - Energy Utilization Performance Project; the Institute of Nuclear Medicine; the Advanced Science Center; the Center for Science and Engineering; and funds provided for byproducts utilization activities shall be available only for the following regional projects: Florida Department of Agriculture and Consumer Services; Hawaii Department of Planning and Economic Development; Iowa State University; Oklahoma, Red-Ark Development Authority; Washington, Port of Pasco; State of Alaska.] (Energy and Water Development Appropriations Act, 1987 as included in Public Laws 99-500 and 99-591, section 101(e),) and in addition, as authorities by section 201 of Public Law 95-238 and notwithstanding 31 U.S.C. 3302, revenues received as user fees for use of the Liquefied Gaseous Fuels Spill Test Facility in Fiscal Year 1988 shall be retained and used to provide toxic and flammable spill test facilities and activities.

Explanation of Change

---

Deletes Language contained in Public Laws 99-500 and 99-591 which had specific application to fiscal year 1987.

Proposed Language provides fees from non-Federal users of the Liquefied Gaseous Fuels Spill Test Facility in Nevada to be received into the account as reimbursable expenses to be retained and used to operate, manage and maintain the facility.

DEPARTMENT OF ENERGY  
FY 1988 CONGRESSIONAL BUDGET REQUEST  
ENERGY SUPPLY RESEARCH AND DEVELOPMENT

OVERVIEW

University Research Support

It is generally recognized that both national security and economic growth and revitalization critically depend on a strong and expanding scientific and technological base. This base in turn is heavily dependent on a healthy university system capable of producing both new scientific knowledge and new technical talent. Support of university research by DOE's research programs and related education is an essential investment in the future. The National Energy Policy Plan recognizes the importance of this investment in establishing the following objectives for the Department's research and development programs:

- o To support academic research for the development of basic knowledge.
- o To help train scientific and technical personnel by supporting university research programs.
- o To facilitate the effective transfer of technology.

DOE is a major supporter of university research both through research grants and contracts with university scientists and through the use of unique laboratory-based research facilities and resources by university faculty and students. The Department, along with other Federal R&D mission agencies, also assists in the replenishment of the Nation's scientific and technical manpower pool through support of university research. DOE's statutory responsibility in manpower development is derived from the authorization legislation of DOE's predecessor agencies which authorized the conduct of education and training activities with universities and colleges (Public Law 83-703, Section 31.b) and required the agency to help ensure an adequate supply of manpower for the accomplishment of energy R&D programs (Public Law 93-483, Section 103 (11)).

Since the establishment of the Department in 1977, DOE has strongly supported close interactions with the Nation's universities. This objective was reemphasized in 1984 with the issuance of policy guidelines from the Secretary. These Secretarial guidelines note the importance to DOE of stable and comprehensive university research and manpower development programs, both directly and through the Department's laboratories. Special emphasis was given to the importance of involving students in DOE-sponsored research.

The University Research Support Program (URS) and the related University Research Instrumentation Program (URI) are the primary approaches used by DOE to strengthen the institutional capabilities of universities and colleges to effectively and continually contribute to the Department's long range R&D mission. The URS Program consists of three major subprograms and a set of interrelated program activities focused on the following three primary objectives:

1. Strengthen university capability to perform long range energy R&D;
2. Enhance the quality and increase the numbers of young people interested in pursuing energy-related professional careers;
3. Take full advantage of the unique resources and facilities at the DOE national laboratories for university faculty and student research and training.

The first URS subprogram, University Laboratory Research, includes support for faculty and student research and training appointments at the DOE laboratories and for the maintenance of university-based nuclear research and training capabilities through the support of university research and training reactors. The essential roles played by the Department's laboratories in assisting in university research and manpower development have been underscored in recent ERAB reports on the health of U.S. colleges and universities. This latter report encourages the laboratories to provide much more access to their facilities by both universities and industry and to develop further the complementary role of the laboratories in university-related research and education.

Consistent with the President's goal of improving our national science and technology research and education base, and the 1984 Secretarial guidelines on the importance of strengthening DOE-university relationships, a major expansion is proposed for the URS Program in FY 1988. This expansion would initiate support for semester length research appointments at five DOE multiprogram laboratory science centers involved in science education in FY 1988. This activity would build upon the University Laboratory Cooperative Program (established in 1960) and provide significant additional opportunities for university faculty and students to use DOE laboratory facilities on a year round basis. Support would initially be provided for semester-length appointments for undergraduate science and engineering students selected nationally, based on academic merit and future research interests. The initial emphasis on undergraduate student support is directly responsive to the White House Science Council Report which recommends that Federal agencies provide additional opportunities for the best and brightest undergraduate science and engineering students.

During the appointment period, the participants will pursue a program with three basic elements: (1) research on a specific project in collaboration with laboratory scientists and visiting university faculty; (2) hands-on

experience with major, state-of-the-art scientific research instrumentation; and (3) an educational enrichment activity that supplements the research with seminars on advanced topics and exposure to different scientific activities at science centers at the participating laboratories.

The second URS subprogram, University Reactor Fuel Assistance, provides support for refueling and related activities for university nuclear research and training reactors. The National Academy of Science/National Research Council Energy Engineering Board is completing a study of the status and role of university reactors and is expected to make recommendations on DOE's future policies regarding nuclear university research reactors. The low enriched uranium (LEU) reactor fuel conversion program, as required by the Nuclear Regulatory Commission, will be approximately at its midpoint by FY 1988 with twelve university reactors having received support for their reactor safety studies and three having received Commission approval and order for conversion.

The third URS subprogram, Energy Manpower Development, includes efforts directed at increasing the number of young people pursuing energy-related scientific and technical careers. This subprogram also includes the Department's statutory responsibility for assessing the supply and demand of manpower for both current and future energy R&D programs. A significant expansion of support is proposed in the FY 1988 budget for precollege science student and teacher programs sponsored by the DOE laboratories. Five high school science student honors programs would be supported in FY 1988 at the Lawrence Livermore, Brookhaven, Lawrence Berkeley, Oak Ridge, and Fermi National Laboratories. Students would be selected for participation in these programs by the Governors of the respective States. Similar institutes sponsored in FY 1985 and FY 1986 have received national visibility and acclaim as ways of exposing the very best high school science students to the world-class research facilities and programs at the DOE laboratories.

The ongoing programs and activities and the expansion proposed for the URS Program represent the Department's long term commitment to ensuring stability and continuity in the support of student-related programs by taking full advantage of the unique resources and facilities of the Department's national laboratories for university research and scientific education.

KEY ACTIVITY SUMMARY

UNIVERSITY RESEARCH SUPPORT

I. Preface: University Laboratory Research

Support is provided to DOE laboratories and university consortia for the placement of faculty, graduate, and undergraduate students for summer or academic year research and education activities. One of the principal objectives is to take full advantage of the unique resources and facilities at the DOE laboratories for faculty and student research and related education. This subprogram also includes support for technology exchange research involving the major DOE multiprogram laboratories. This effort takes advantage of the scientific and technological capabilities at the DOE laboratories with the purpose of helping to enhance the Nation's industrial competitiveness.

III. Activity Descriptions

Program Activity	FY 1986	FY 1987	FY 1988
University Laboratory Research	Supported 2,000 faculty/student research/education appointments at DOE labs and provided cost-shared support for four visiting industrial scientist research appointments at labs. Funded one joint lab/HBCU research and manpower development effort. (\$5,714)	Increase number of faculty/student appointments at labs to 2,300 and fund research associated with 25 visiting industrial scientist appointments at DOE labs. Each appointment will be significantly cost-shared with the participating companies. This effort is part of the DOE technology transfer responsibility. (\$6,775)	Supports 2,500 faculty/student research and education appointments at DOE laboratory and university consortia and two laboratory/HBCU joint research and manpower development projects (\$6,800). Supports 25 to 30 cost-shared visiting industrial scientist research appointments and related technology transfer responsibilities at DOE laboratories. (\$1,000)
	No activity.	No activity.	Expand lab coop program to support semester length research appointments for undergraduate science and engineering students at five DOE multiprogram laboratory science centers. (\$2,000)
	No activity.	Provides support for Center for Excellence in Education, Indiana University. (Proposed for rescission in FY 1987 by the Administration.) (\$3,800)	No activity.
Subtotal University Laboratory Research	\$ 5,714	\$10,575	\$ 9,800

I. Preface: University Reactor Fuel Assistance

Provides support associated with the fabrication and shipping of nuclear fuel for university-based nuclear research/training reactors. The university-based nuclear research and manpower development effort is highly dependent on these specialized facilities, not only for nuclear related training, but also for research in the basic sciences. This subprogram also includes support on a competitive basis for university reactor sharing grants which provide research and training opportunities for faculty/students from nearby universities and colleges.

II. A. Summary Table

Program Activity	FY 1986	FY 1987	FY 1988	% Change
University Reactor Fuel Assistance	\$ 3,626	\$ 3,900	\$ 1,900	- 51

II. B. Major Laboratory and Facility Funding

Total.....	\$1,861	\$2,710	\$1,515	- 44

III. Activity Descriptions

Program Activity	FY 1986	FY 1987	FY 1988
University Reactor Fuel Assistance	Refueled five university nuclear reactors (\$1,301) and supported 20 reactor sharing awards (\$399).	Provide refueling for seven university reactors (\$1,500) and fund 20 reactor sharing awards (\$400).	Provide refueling for two HEU fueled university reactors and stretches out schedule for additional five reactors for which LEU fuel would be scheduled to be ordered in FY 1988 (\$600) and fund 20 reactor sharing awards involving scientists from 50 colleges and universities (\$400).
	Initiated support for NRC mandated conversion to Low Enriched Uranium (LEU) fuel. Supported seven conversion safety analysis studies, spent fuel shipping and shipping cask development. (\$1,926)	Continued support for NRC mandated conversion to LEU fuel. Supported five new safety analysis studies, procured LEU fuel for three reactors, completed shipping cask certification and moved HEU fuel from four reactors. (\$2,000)	Reduces support for NRC mandated conversion to LEU fuel, thereby stretching out original schedule. Supports three safety analysis reviews anticipating planned LEU conversion in the future (\$900).
Subtotal University Reactor Fuel Assistance	\$ 3,626	\$ 3,900	\$ 1,900

I. Preface: Energy Manpower Development

This program supports the continued collection and analysis of base line data on the employment, utilization, and supply of engineers and scientists relative to energy-related manpower supply/demand. This activity also supports the Department's longer term R&D mission by encouraging students to pursue energy-related scientific and technical careers through activities such as the Pre-Freshman Engineering Program (PREP), high school science teacher institutes, and the DOE high school science student honors program.

II. A. Summary Table

Program Activity	FY 1986	FY 1987	FY 1988	% Change
Energy Manpower Development.....	\$ 828	\$ 1,300	\$ 1,700	+ 31

II. B. Major Laboratory and Facility Funding

Pacific Northwest Laboratories....	\$ 0	\$ 20	\$ 0	-100
------------------------------------	------	-------	------	------

III. Activity Descriptions

Program Activity	FY 1986	FY 1987	FY 1988
Energy Manpower Development	Continued analyses of energy-related manpower supply/demand data. (\$443)  Supported 21 Pre-Freshman Engineering (PREP) projects involving 2,300 minority and women precollege students. (\$385)  No activity.	Support energy/manpower supply/demand analyses. (\$500)  Fund 21 PREP projects reaching 2,300 students. (\$300)  Support laboratory-based precollege program including high school student honors programs at LLNL, BNL, and Fermi labs. Students are selected for participation in these programs by the respective state Governors. (\$500)	Supports manpower analyses at same operating level as in FY 1987. (\$500)  Supports 25 PREP projects reaching 2,500 women and minority junior high school students. (\$350)  Supports laboratory-based precollege science student/teacher programs including five national high school science student honors at LLNL, BNL, ORNL, Fermi Lab, and LBL. (\$850)
Subtotal Energy Manpower Development	\$ 828	\$ 1,300	\$ 1,700
Total University Research Support	\$10,168	\$15,775	\$13,400
