Public Info Code: Y 18-DEC-1986	Ecozone Eq MMS:	Paleo ID: 003

Remark: Palynological (spores, pollen and dinoflagellates) report by Terry Hutter, base of well exhibits floral similarities to Triassic Eagle Mills sequence, although it shows some similarities with the Triassic continental redbeds of Virginia, Colorado and Utah (ie, Chinle Formation), most probable age range for the samples is Cretaceous through Triassic (possibly within the Carnian), 14480=abundant Triassic (Carnian) spores, bisaccate pollen and woody debris), with the exception of the Cretaceous age samples, the samples most likely represent a continental redbed-boulder field sequence, within this sequence volcanoclastics are prevalent, the majority of the organics in the samples are assumed to be air-deposited into the system, extensive oxidation in a continental sequence and aerial transport result in low organic recovery rates, the best organic recovery rates within the continental sequence occur in tuffs
