Parametrix

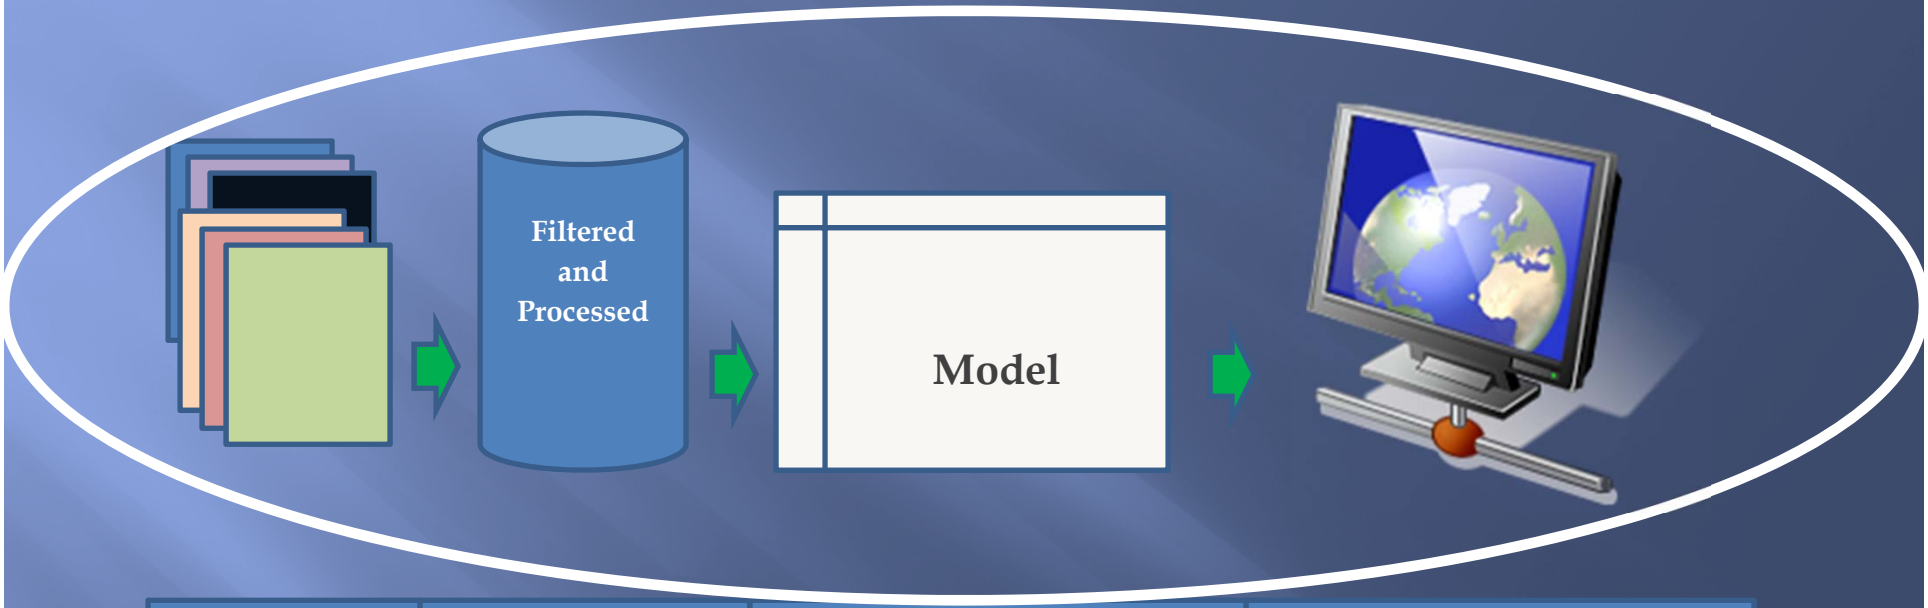
Conclusions

- Focus on ecosystem services based analysis
- Target specific data needs
- Improve use of existing knowledge
- Increase focus on refining and developing decision support tools

Ecosystem Services Framework



Raw Data	Data Library	Decision Engine	User Interface

Parametrix

Ecosystem Services

"[PCAST has addressed the needs and opportunities] . . . of governments—and especially the U.S. Federal government—to fulfill more effectively their responsibility in relation to the **protection of environmental capital and ecosystem services**."

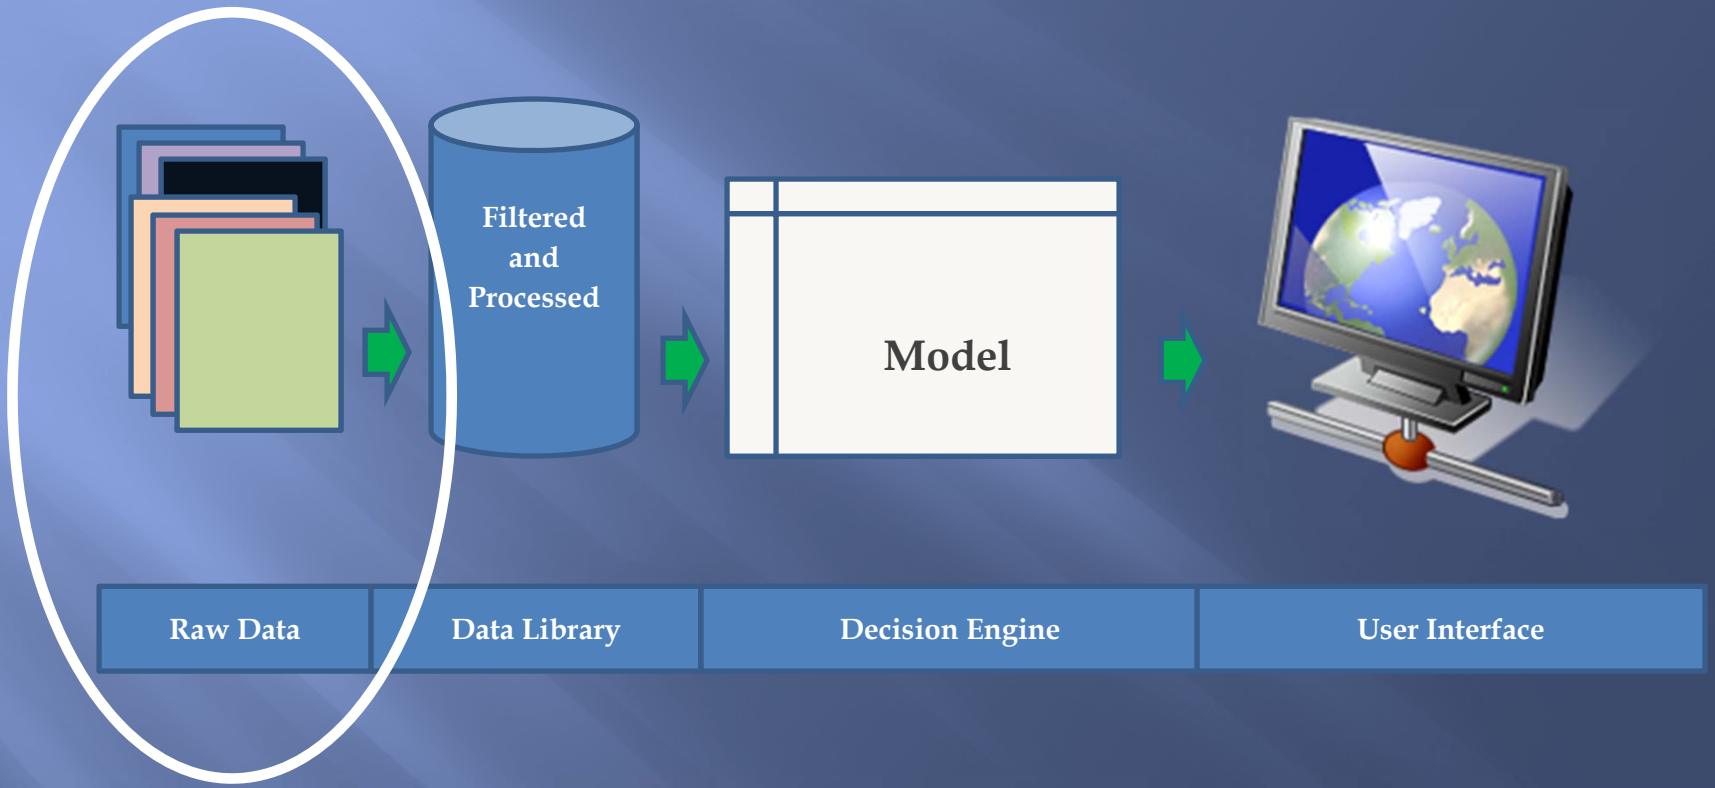
-President's Council of Advisors on Science and Technology.
Sustaining Environmental Capital: Protecting Society and the Economy"
July 2011

Parametrix

Ecosystem Services

- Sustainability
- "Much of the world's environmental capital, moreover, consists of common-property resources rather than privately held assets . . ."
- OMB/OSTP FY 2012 budget guidance

Gathering Data



Parametrix

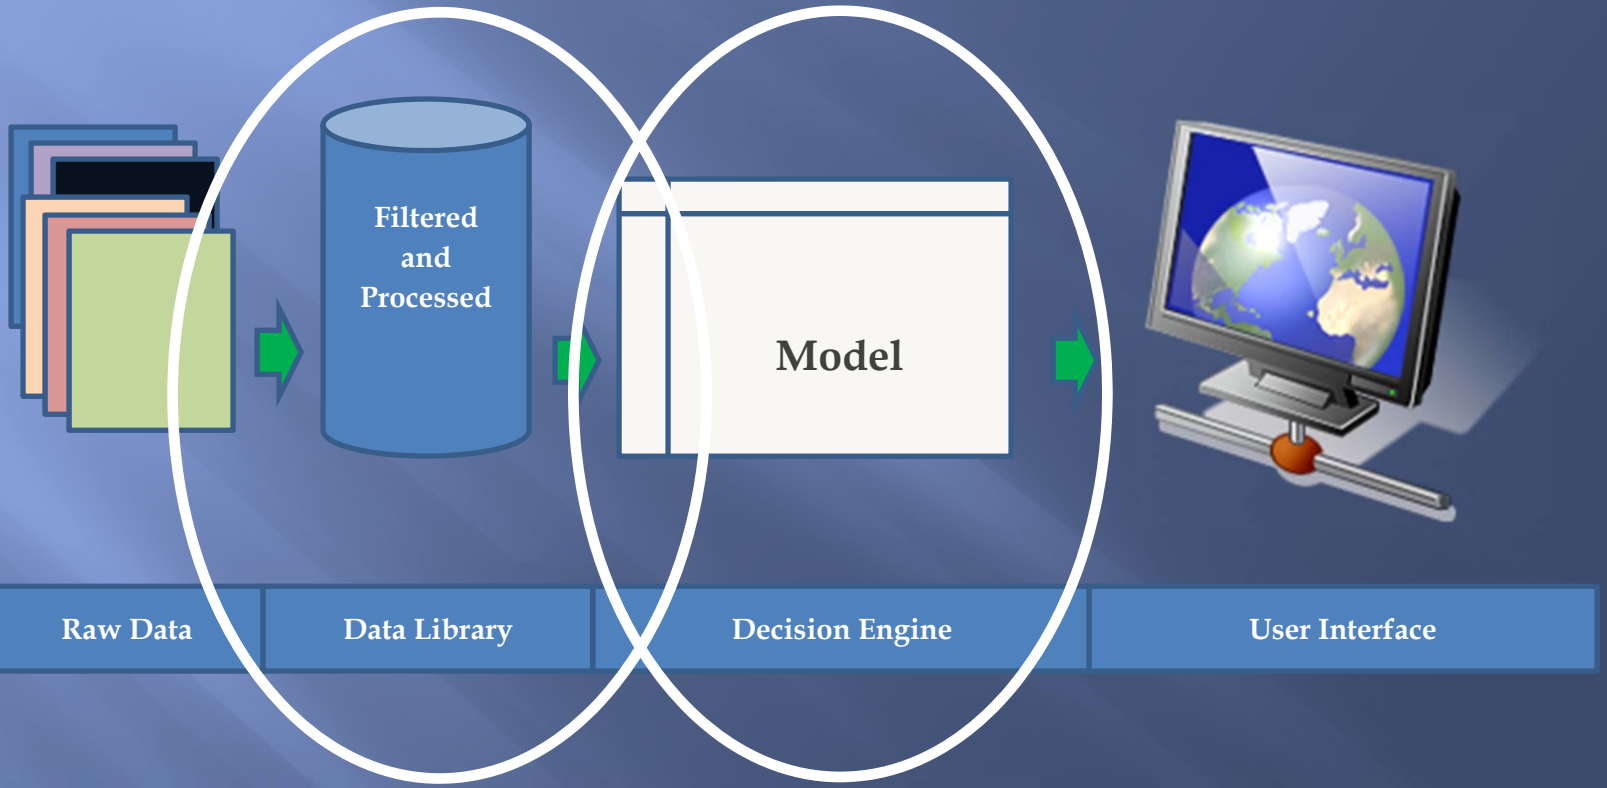
Understanding Ecological Condition and Ecosystem Service Relationships

" . . . the information actually available on these topics is far from complete. But it is also far, far more than none at all."

-President's Council of Advisors on Science and Technology. *Sustaining Environmental Capital: Protecting Society and the Economy"* July 2011

- Ecotrust Fishing study
- Surfriders non-consumptive recreation study
- Near shore high resolution bathymetry
- Integrated Ocean Observatory System (IOOS)
- BOEMRE space use conflicts study

Decision Support Elements



Parametrix

"EcoINFORMA is needed to ensure that Federal agency data relevant to biodiversity and ecosystems, as well as the socio-economic and geophysical data required in support of ecosystem valuation and decision-support, are **published in machine-readable, interoperable format to facilitate research** engagement by public, private, academic, and other stakeholders, and to support policy- and decision-making at Federal, state, and local levels."

-President's Council of Advisors on Science and Technology.
Sustaining Environmental Capital: Protecting Society and the Economy"

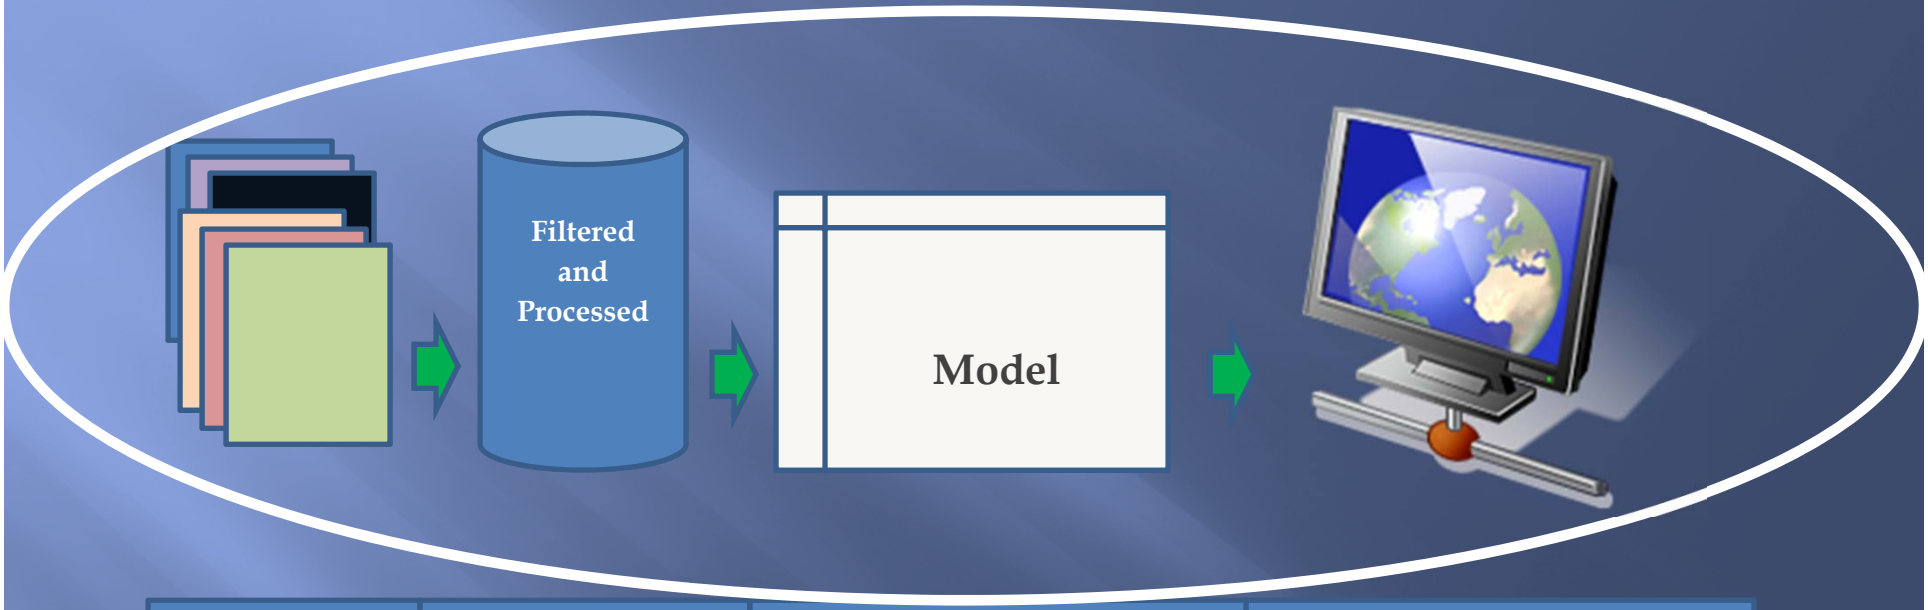
  - OWET Studies
  - NOPP studies (BOEMRE/NOAA/DOE)
  - BOEMRE environmental studies

Supporting Decision Support



Raw Data	Data Library	Decision Engine	User Interface

Parametrix

Need for Decision Support

"Despite the abundance of data that come from existing monitoring programs, decision makers at every level lack sufficient information—that is, the results of analysis and interpretation of data."

-President's Council of Advisors on Science and Technology. *Sustaining Environmental Capital: Protecting Society and the Economy"* July 2011

On-going Efforts

- Marine Map
- Marine InVEST
- ARIES
- TNC Ecoregional Assessment

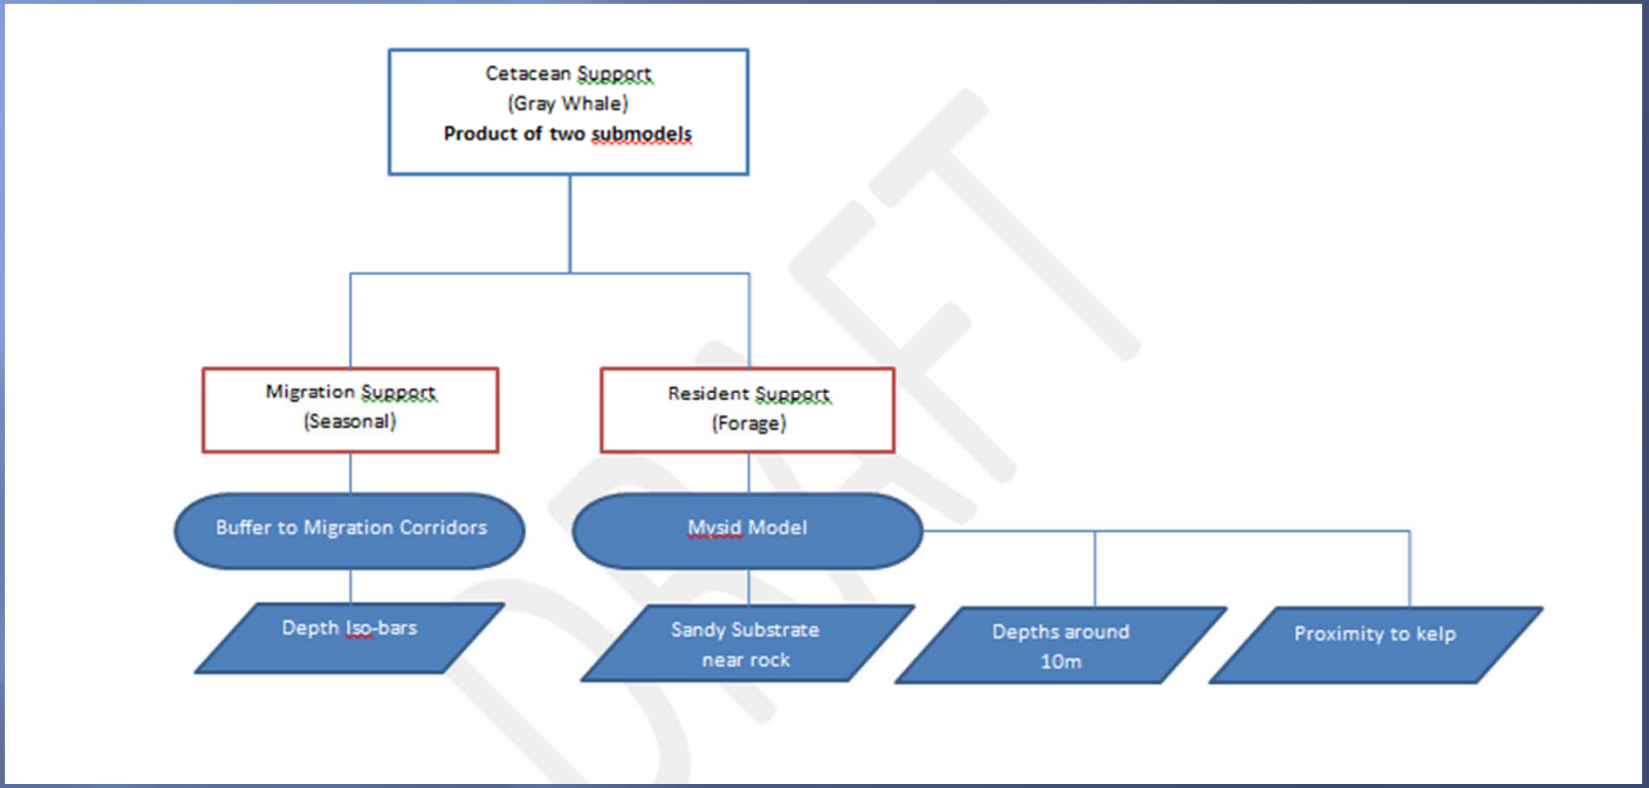
Function-Based Product Model



Scoring

Model Specifications

The cetacean support model includes two parts, migration support and foraging support. The model is Gray Whale specific (*Eschrichtius robustus*) and is a synthesis of both spatial and non-spatial data. The migration sub-function models corridors of importance based on observed point data and the correlation with physical environmental parameters, primarily depth contours. The forage sub-function is primarily for resident species and is also based on available observed data from the Oregon coast.

The impact models are the interaction of the function with known existing sea uses, conditions and activities. These are anthropogenic and include fishing effort, vessel navigation and water quality.

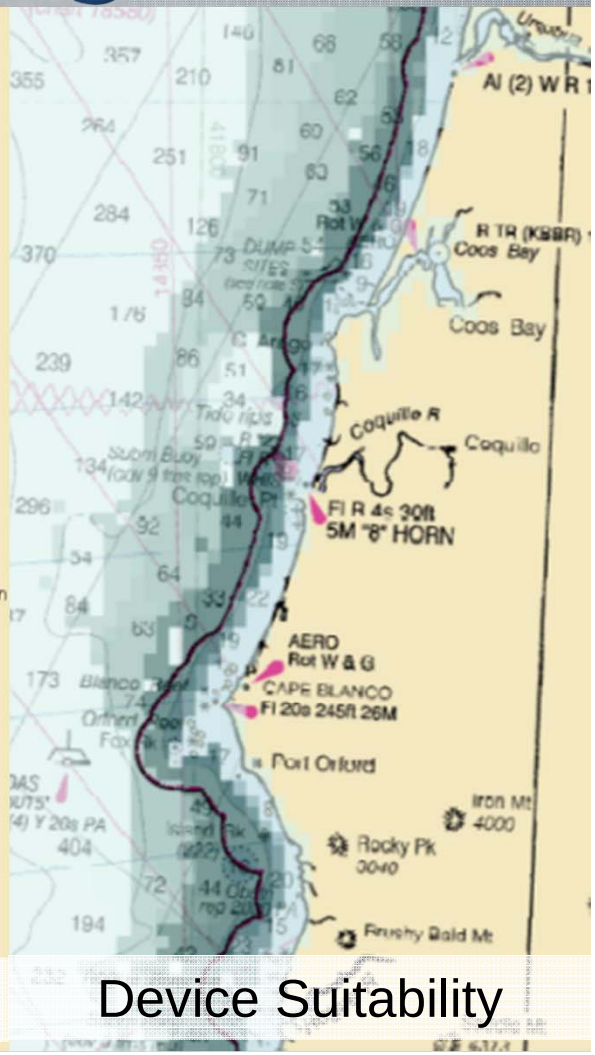
Visual Resources

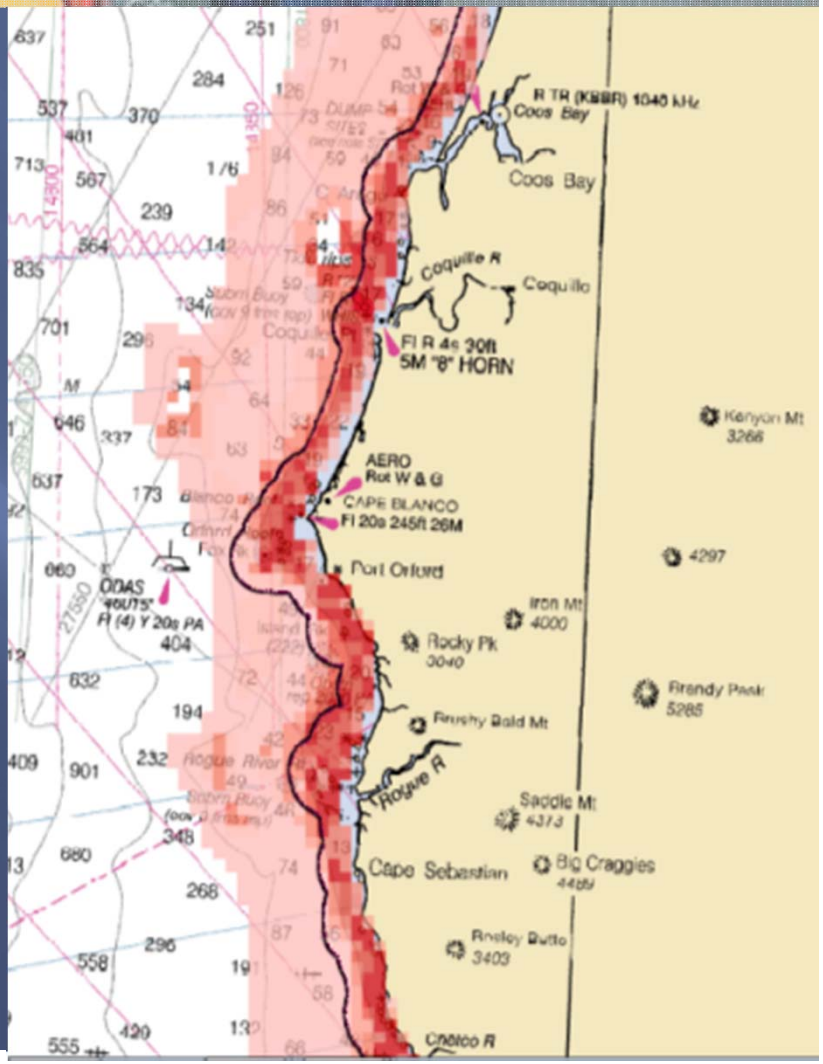


Device Suitability

Parametrix

Combined Functions

- Scenario Based Analysis
  - Functions are related to other uses
  - Proposed Development Scenario related to functions
  - Combined impact delta from natural baseline for cumulative impact



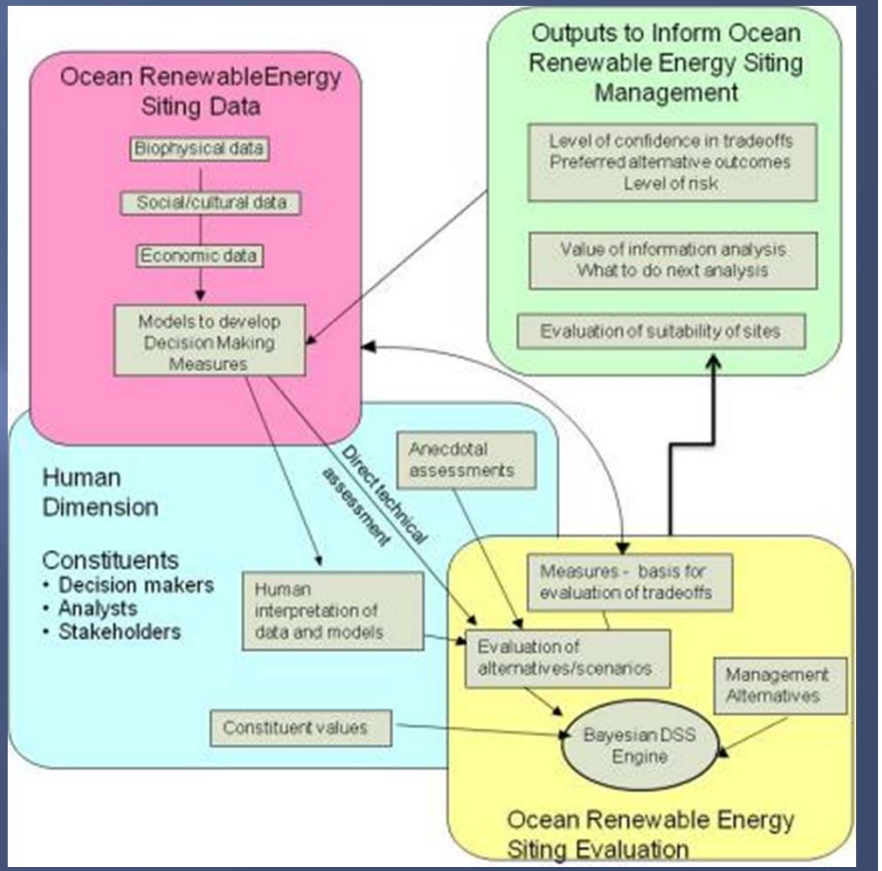
Parametrix

Some Challenges…

- Managing Data Variability and Gaps
- Managing Differing Opinions
  - Scientific
  - Development
  - Public
- Managing Uncertainty

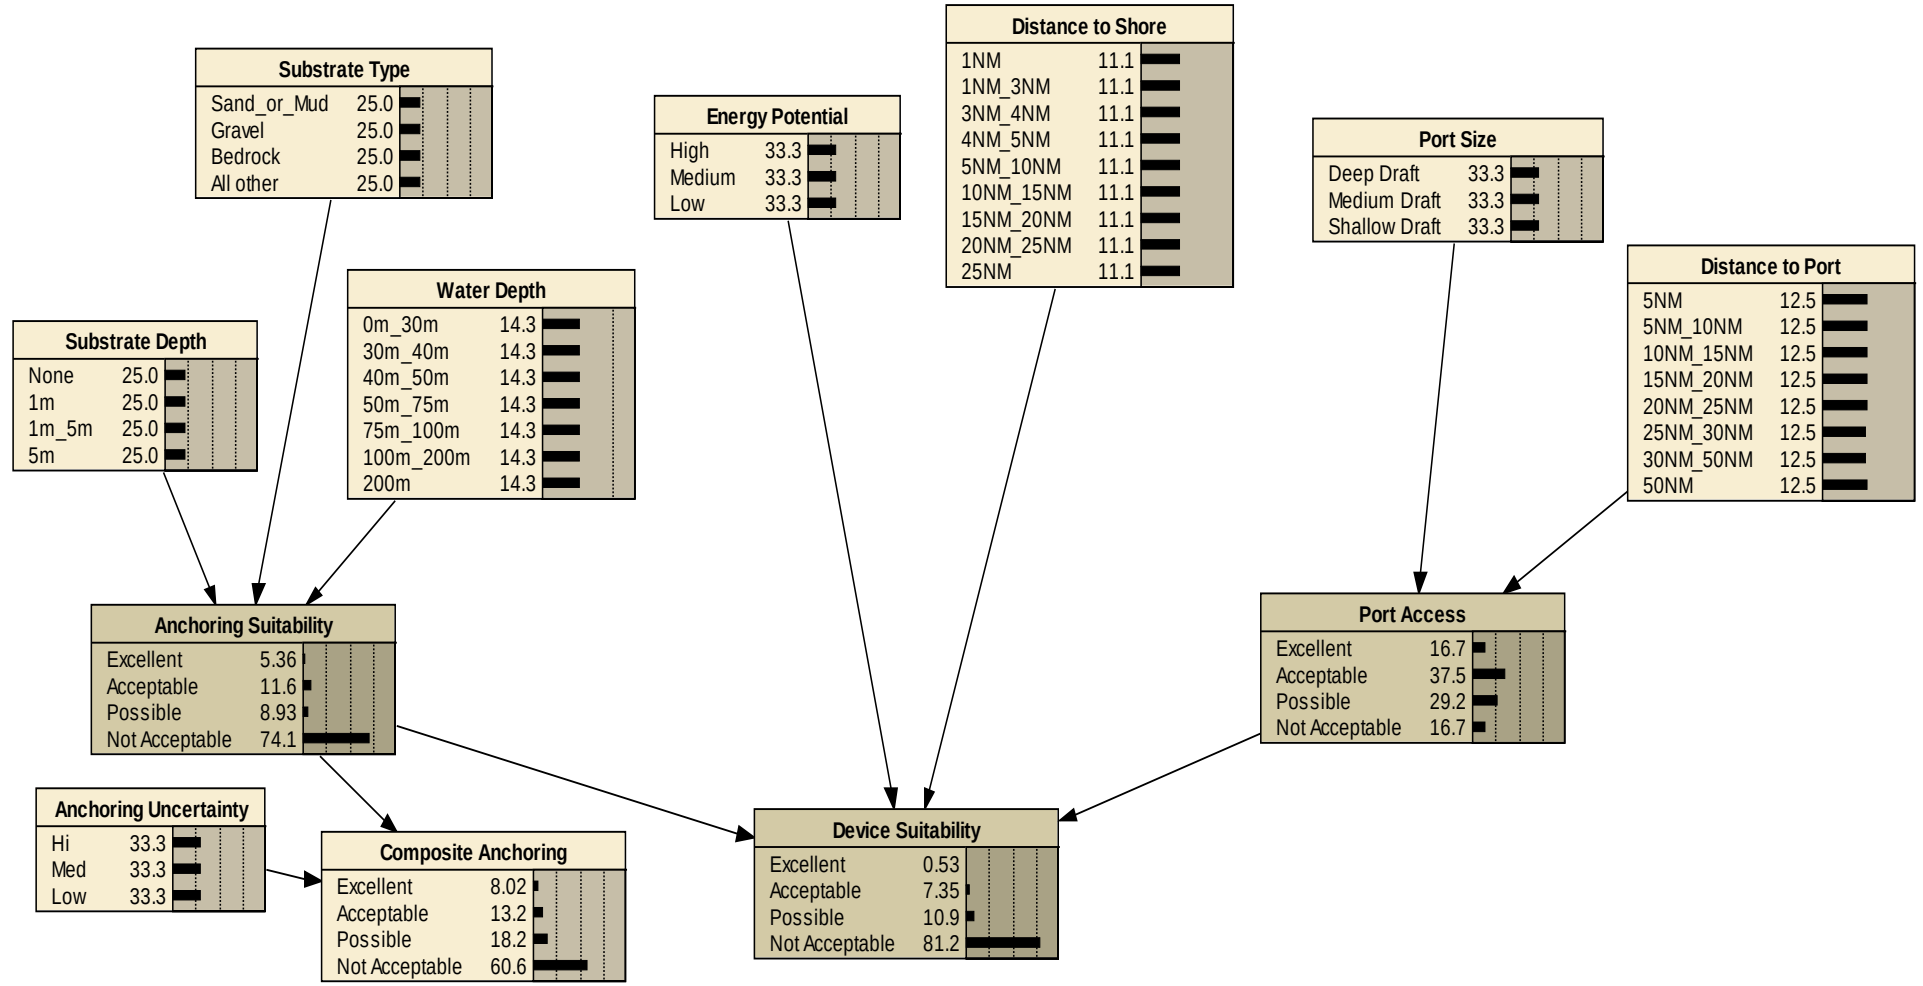
Bayesian Analysis

- Probability Driven
  - Conditional probabilities to capture complex uncertainty
- Partners
  - Oregon State University
  - Robust Decisions
  - The Nature Conservancy



Parametrix

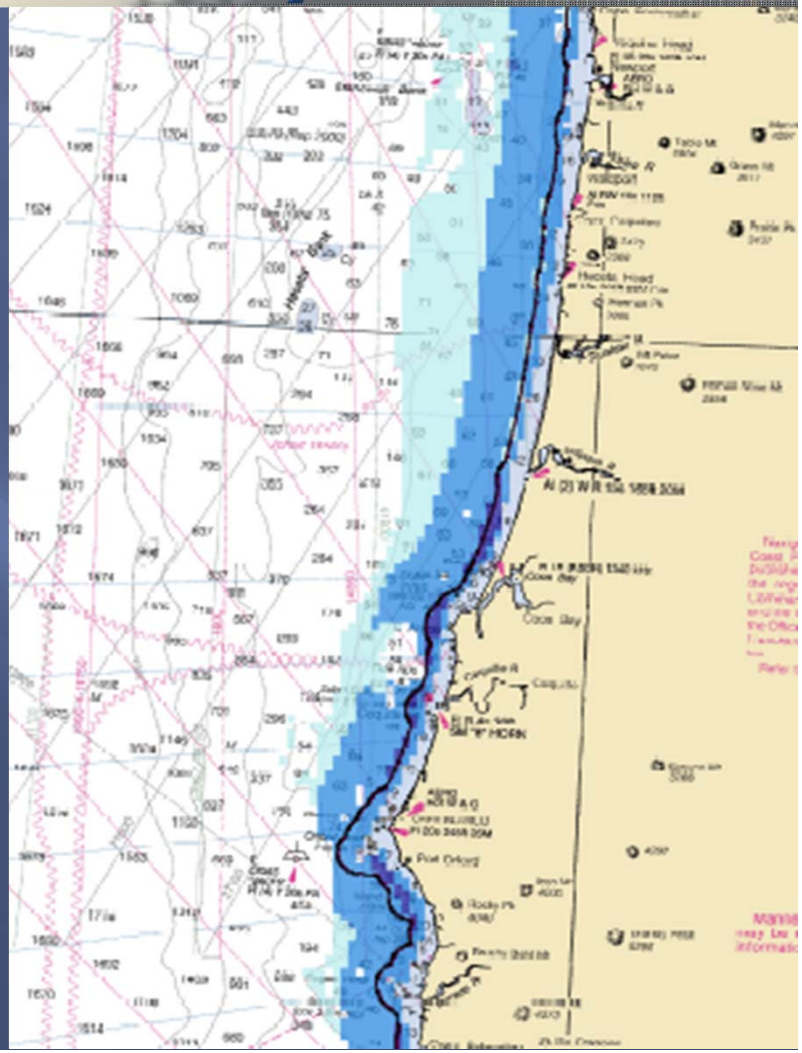
Bayesian Belief Networks



Parametrix

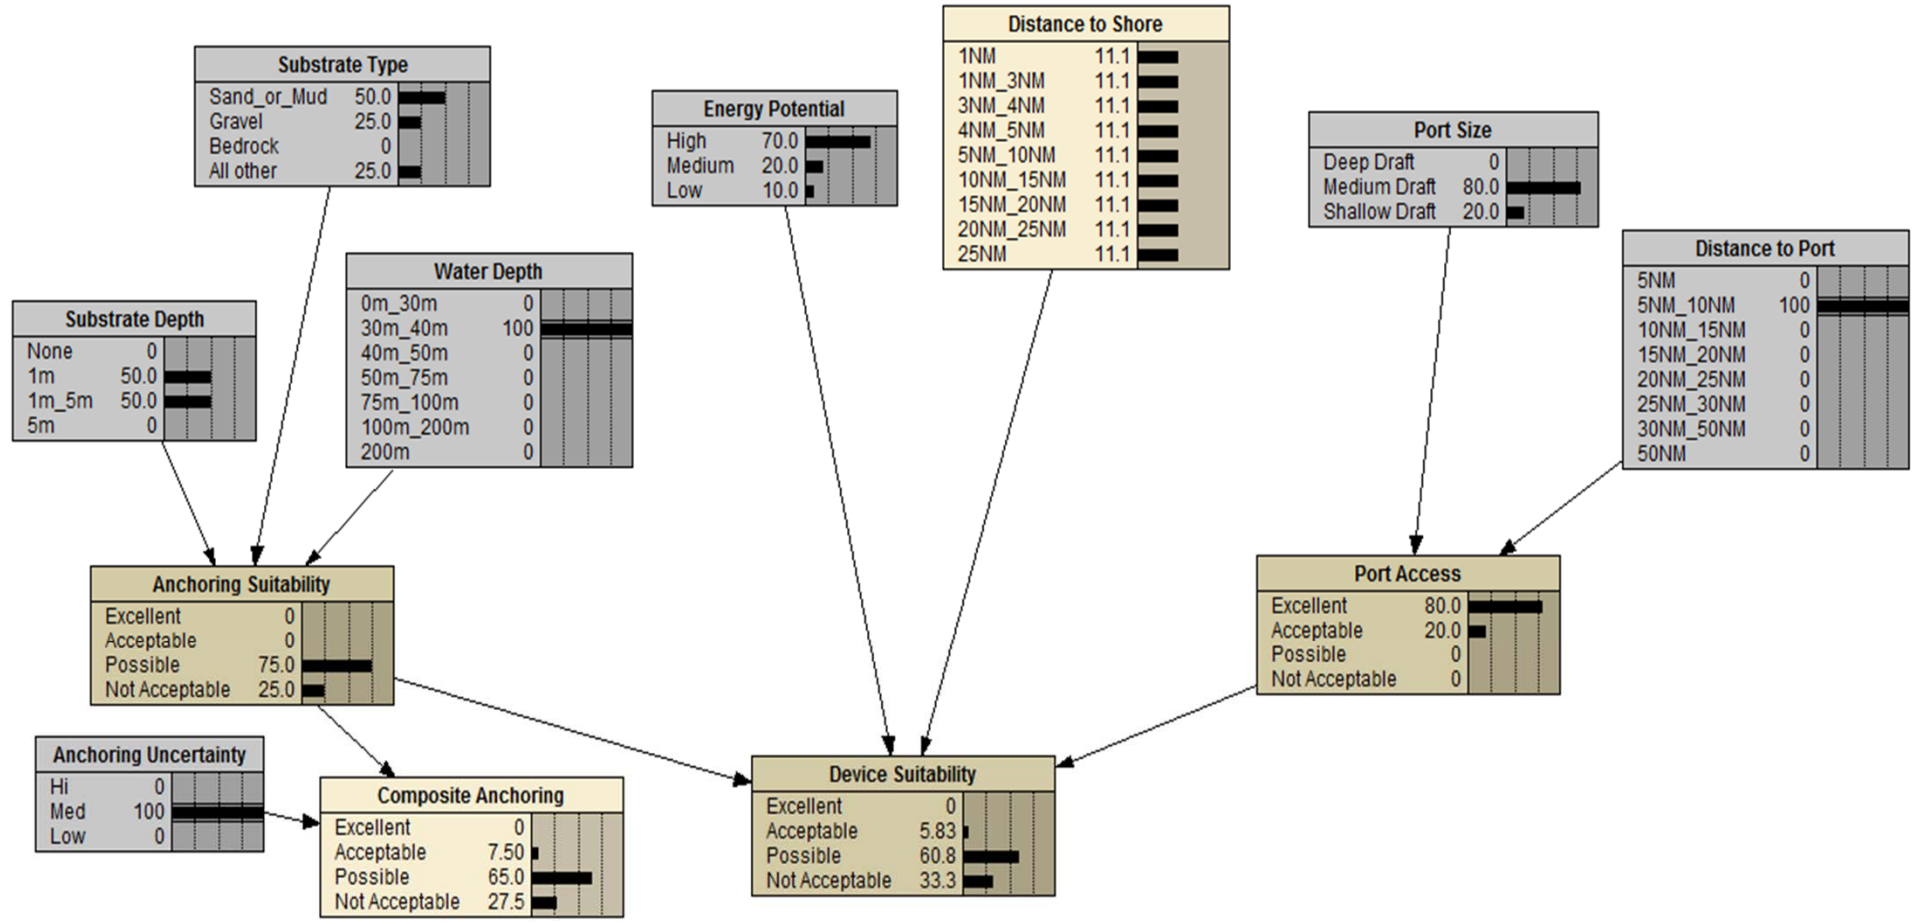
Guided Spatial Analysis

- Multiple Models and Inputs
- Various Reviewers
- Allows for Non-Existent Data



Parametrix

Partial Information Management



Ecological Modelling

- Black Rockfish Example
  - Two different bathymetry data sets (50M and 4M)
  - Different assumptions about habitat "believe-ability"
- Manages uncertainty and varying data quality

- Conditional Probability Tables
  - Engine for decisions
  - Creates probabilities
  - Allows for analysis of value of information

Final Tool

- Web-Enabled Tool for Decision Support
  - Collects preferences from reviewers
  - Presents spatial results from preferences
  - Supports informed alternatives analysis
  - 2012 Roll-out
