

Oregon Coastal and Marine Data Network

T.Haddad, August 1, 2011, Portland, OR
BOEM Taskforce Meeting

Workshop

- Workshop conducted June 6th-7th, 2011 in Salem, OR
- Thirty-eight people from Oregon, California, and Washington representing state and federal agencies, non-governmental organizations, environmental consulting firms, universities, and data collaboratives

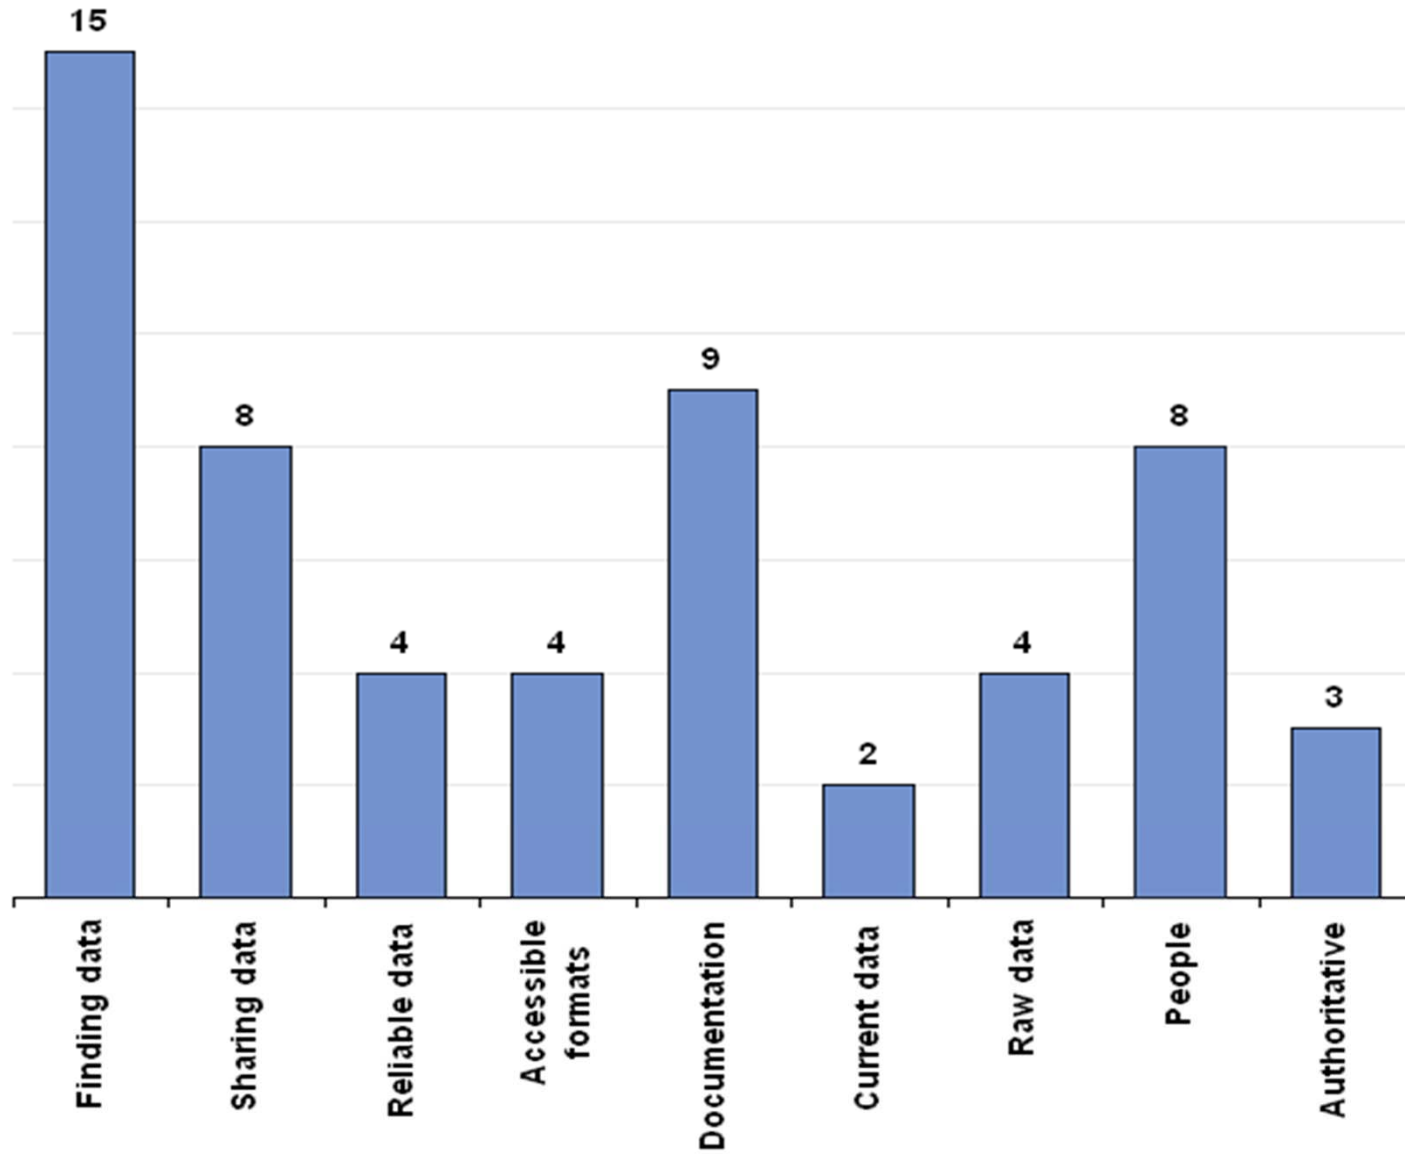

Objectives

- Provide existing examples and models for user community interaction and discussion on coastal and marine institutional data collection, sharing, and integration;
- Identify and prioritize issues, solutions, and action items that would enable coastal and marine data producers and users to be long-term data stewards; and,
- Draft a framework for an Oregon user community network to address coastal and marine data stewardship and technical concerns.

Motivation

- Finding, accessing, [relevant] data
- Consistent / reliable availability
- Accessible formats
- Well-documented data
- Timely, current, up-to-date data
- Legacy or historic data
- Un-adulterated data
- Contacts: people, authoritative sources

Topics Raised

Network Scale

The scope/scale of the Network should consider an administration/management scale (Oregon) and a geographic/ecosystem scale. In short, the Network should be nested, aiming toward regional participation and data, but initially focused on Oregon, with a desire for other west coast states to become part of the network.

Outcomes

- Workshop report to be issued August, 2011
- Schedule of next steps through fall 2011
- Plan for next meeting Spring 2012

Oregon Coastal and Marine Data Network Workshop

Workshop Summary

6-7 June 2011

Eola Viticulture Center

Salem, Oregon
