

Overcoming Barriers: Deploying High Efficiency
Outdoor Lighting:
Regional Streetlight Procurement Program (RSLPP)

Liz Compitello Senior Research Analyst Delaware Valley Regional Planning Commission

Technological

LED performance improvements
Successful pilots in the region

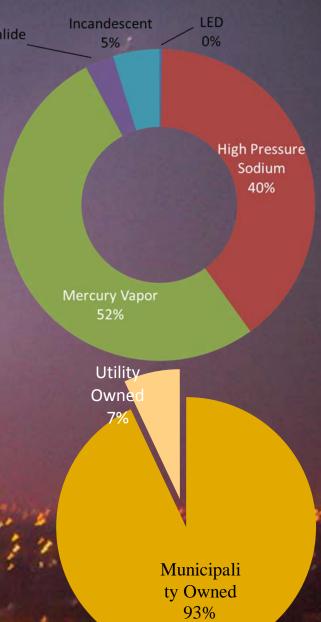

Regulatory

Municipal ownership of streetlights
Utility recognition of LEDs

Financial

LED costs dropping

Pennsylvania Sustainable Energy Finance (PennSEF) Program

Regional Streetlight Procurement Program

Program Objective

Municipalities are able to access energy performance contracting to retrofit their entire street lighting systems to LED. The program will pool buying power to achieve economies of scale in purchasing and finance.

Program Scope

Joint RFP

- i.d. a single ESCO for project design, procurement, and installation.
- Expert-vetted specification for streetlights through RFP process
- Transparent, competitive pricing

Common project timeline

Free basic audit and cost estimates

Guaranteed Savings Agreements

Pooled Procurement and Financing

Project Partners

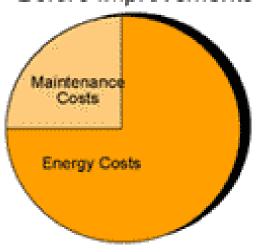

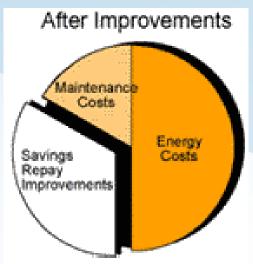

Performance Contracting: A Simple Explanation

How do you re-invest in your municipal infrastructure with money you are already spending on utilities and external vendors.

The PA Guaranteed Energy Savings Act is a no-risk way to fund these improvements using future savings instead of capital reserves.

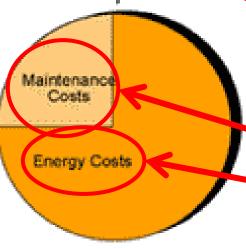

Performance Contracting. A Style Explanation

How do you're-invest in your municipal infrastructure with money you are already spending on utilities and external vendors

The PA Guaranteed Energy Savings Act is a no-risk way to fund these improvements using future savings instead of capital reserves.

Performance
Contracting

Owners Agent - Program Technical Advisor

Keystone Lighting Solutions Whole program services

- Assist with technical elements of RFP
- Developed common streetlight specification
 - Using MSSLC Model Specification-System Specification
- Review ESCO RFP proposals, comment and provide input on selection process
- Program design support
- Product design and pricing review

One-on-one direct assistance to participants

Scope defining, evaluating ESCO solutions and design

Pennsylvania Sustainable Energy Finance Program

A collaborative partnership between the Pennsylvania Treasury and the Foundation for Renewable Energy and the Environment (FREE)

- In an effort to expand its investments in energy efficiency, PA
 Treasury secured a grant from the West Penn Power Sustainable
 Energy Fund in order to set up PennSEF with the goal of purchasing
 the bonds issued by the program
- FREE is a nationally recognized leader in sustainable energy and its team has already piloted the PennSEF model, financing over \$70 million in energy efficiency improvements in Delaware
- The FREE team includes Drinker Biddle & Reath as counsel and Becker Capital as financial advisor

Key Program **Features**

- Prequalification of local and national energy service companies (ESCOs) through an RFQ process
- Standardized documentation that facilitates pooled financing which lowers costs for *all* Participants
- Guaranteed Savings Agreement is a transparent construction contract with a strong guarantee and spells out a monitoring and verification (M&V) plan in detail
- Guarantee is based on energy and water savings alone – operational savings, deferred maintenance are a bonus
- FREE's legal, financial and technical team assists throughout negotiations

Overcoming Barriers

Barriers

No Upfront Capital / High Upfront Cost

Solutions

- RFP ensured competitive, vetted pricing
- ESCO will procure all equipment and labor in bulk municipalities achieve lower cost than what they can get on their own.
- Energy savings guarantee. No upfront cost required all projects can be fully financed and paid back through energy and maintenance cost savings.

Access to Finance

- All project sizes have access to financing (\$20K-1.5M)
- Financing "subject to appropriation" does not eat into debt limit
- Pooled Financing lowers cost of borrowing

Choosing LED Technology

- Common expert vetted specification in RFP
- Workshops, webinars
- Pilot phase, tours of existing projects in the region

Overcoming Barriers

Barriers

Trusting an ESCO

Solutions

- RFP allowed us to compare ESCOs apples to apples on pricing, quality
- PennSEF's Trusted Advisors work to ensure the 'guarantee' in the Guaranteed Savings Agreement
- ESCO oversight of design, communications, procurement by RSLPP team (DVRPC, KLS, PennSEF)

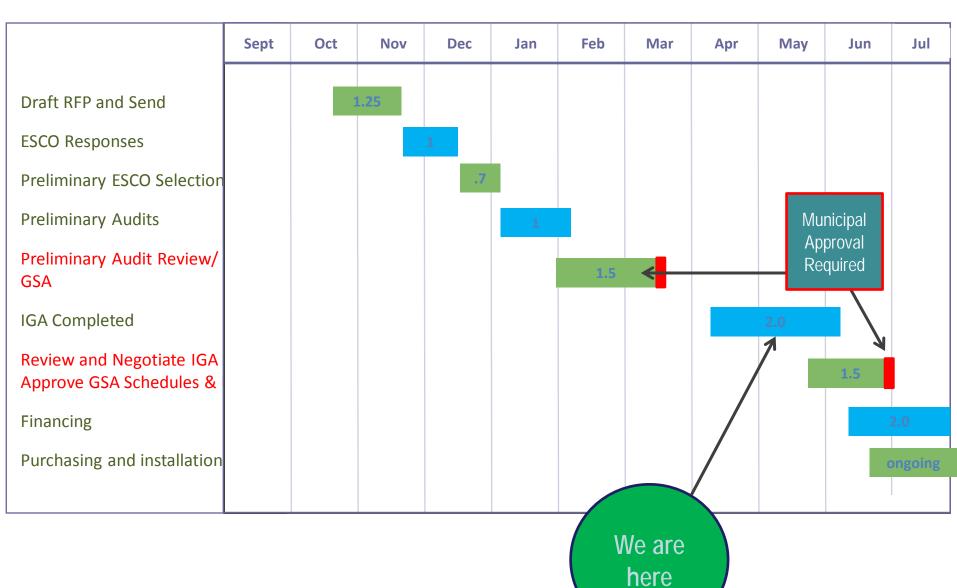

Municipal Decision Making

- Common forum to share lessons learned, disseminate information
- Peer pressure
- Tight, common time frame
- Standard documents
- Program advisors "on call"

Working with the Utility

- Clear communication from the start
- Working with their existing template
- Updates will occur in bulk

RSLPP Program Timeline

Preliminary Results

~40 out of 45 municipalities proceed with an investment grade audit

- 23,500 Streetlights (cobrahead and decorative).
- Traffic signals, exterior lighting, Simple to Complex Control Systems

\$12-\$15 million dollar project

Average project size ~\$312K (range: \$22K - \$1.4M)

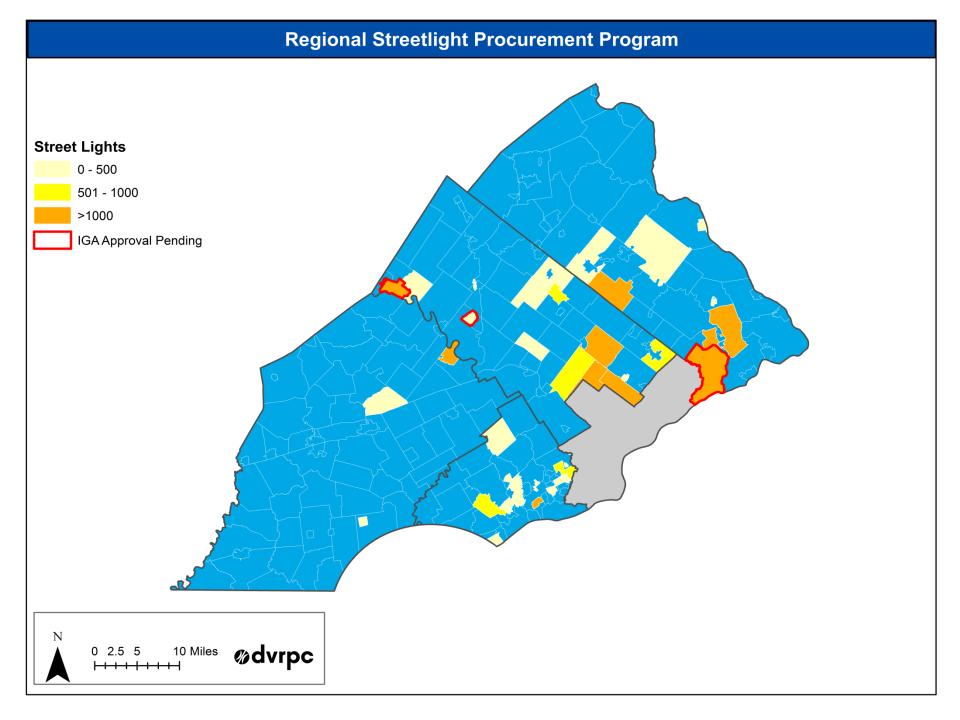

Annual energy savings total ~\$950,000

- Average 7 year payback for cobraheads
- Average ~20 year payback for decoratives
- Average 8.2 year payback for base project

Financing

- 5-20 year terms will be used
- A few are planning to self-fund

Individual fixture and pole information

Beyond cost savings, we achieved something else too...

- Building trust in Energy Performance Contracting
- Municipal comfort with financing
- Municipalities taking control over their SL infrastructure
- Accelerating the adoption of a high-value technology
- More exposure to LEDs in the region (what's that? I want one too)
- Partnership building and regional cooperation
- Creating a replicable program concept for other types of municipal and public facilities

Emergency and Repairs: 1-800-841-4141. This is the number to call to report power outages, gas leaks or odors, and safety hazards related to PECO equipment. For all other business, call 1-800-494-4000.

Relight Washington

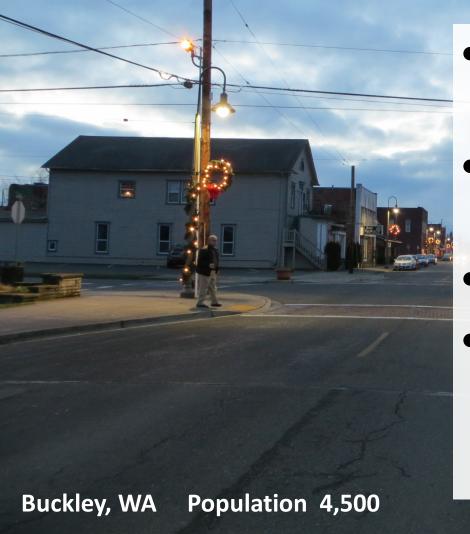

Better Buildings Summit 2016

The Problem Statement

- Small cities left behind.
- Initial capital cost prevents adoption.
- Lack of a statewide strategy to include small cities.
- Strong savings needs faster action.
- Grant processes impair rate of adoption.
- Service providers doubted the savings.

Street lights consume 60% of city direct gas tax

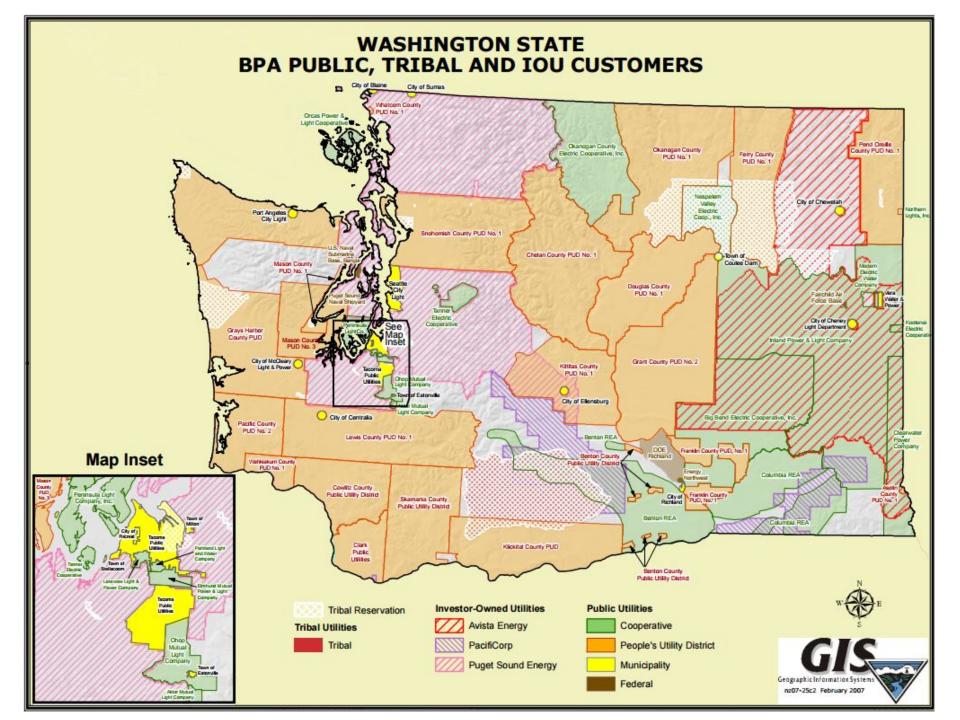

- \$90,000/year direct gas tax
- \$55,000/year to street lights
- 245 PSE Cobras
- City-owned lighting, no replacement parts

What are we getting into?

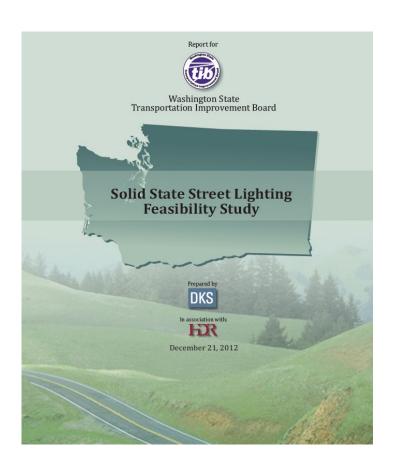

- Is the existing infrastructure too fragile?
 (You break it, you buy it.)
- Is the potential savings truly significant?
- Can we even get the savings to the end user?
- Will conversion ROI?
- Can we fund it?
- Answer the questions before starting a program!

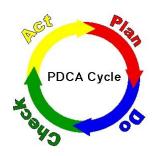

Understanding the Barriers

- Smalls don't own the lights, but need the savings
- Lighting design? Do we need to add poles?
- Low customer awareness
- Electric providers
 - Technology/maintenance acceptance
 - Not believing the savings
 - Willingness to impact profit center
 - Uniform response across providers
 - Institutional complexity!

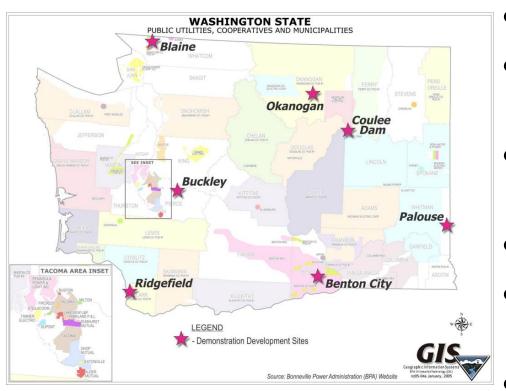

Applying Lean Processes

- Establish Clarity of Purpose
- Determine Feasibility
- Test to Confirm
- Complete SROI Study

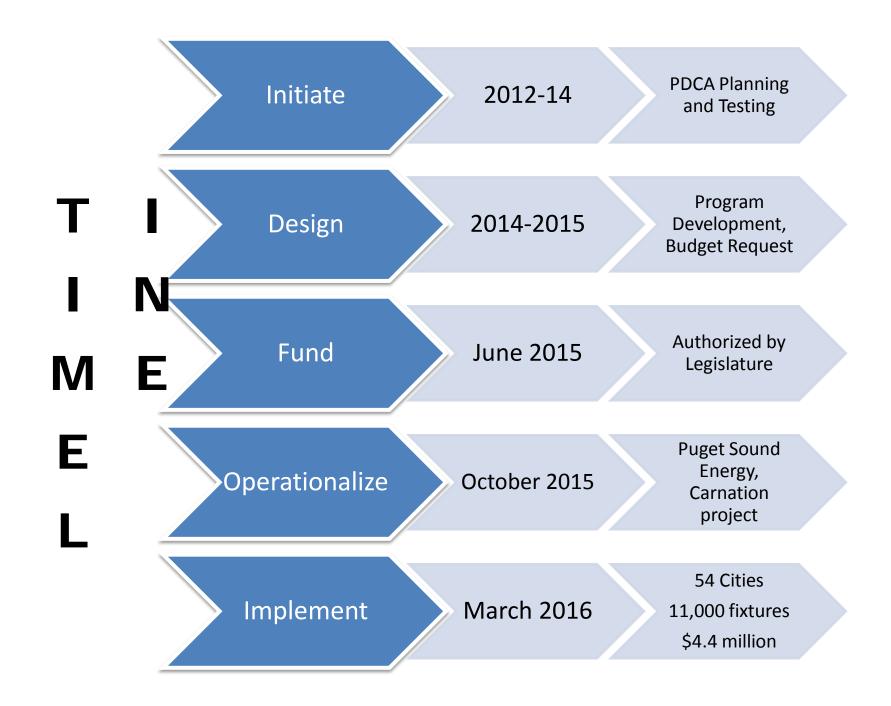

Proof of Concept

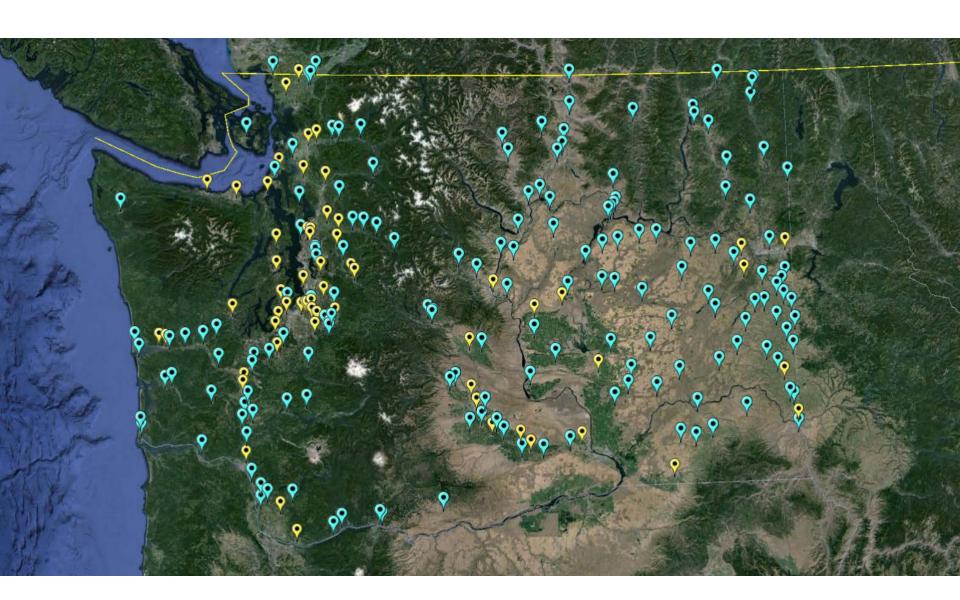

4.6 years ROI

\$2.34 value over 15 years

- Feasibility Study 2012
- Installed 2,000 fixtures in 2013
- Performance measured 2013-2015
- Studied SROI in 2014
- Funded by Legislature in 2015
- Operational in October 2015

Customers: 220 of 289 Cities

The Numbers Game

based on commitments through March 2016

Fixtures to date	11,000
Expenditures to date	\$4,400,000
Cost per fixture (installed avg.)	\$400
Savings to date (est. from sample \$1,000-2,000/mo)	\$80,000/mo \$970,000/yr
Return on Investment	4.5 years
Buildout Cost (est.)	\$24,000,000
Buildout Savings (projected) -accumulated savings/city increases over time because smaller cities are frontloaded	\$330,000/mo \$4,000,000/yr

"If you're saving 5%, take your time. If you're saving 55%, do it now."

Lighting Energy Savings Performance Contracting at North Carolina Dept. of Transportation

Better Buildings Summit May 10, 2016

Department of Environmental Quality

Scope

- Replace existing roadway lights with LED lights
 - 10,500 roadway fixtures (excluding facilities)
 - 172 roadway sites
- Controls
 - What is it you control?

- Lighting upgrades in Maintenance Buildings,
 Visitor Centers and Weigh Stations
 - 156 sites
 - 1638 buildings
 - Over 4 million sq. ft.

Department of Environmental Quality

Project Goals & Scope of Work

High Mast LED Fixtures

Cree Cobra LED Fixture

High Mast Lowering Device

I-40 Eastbound Tunnel #1

Project Goals & Scope of Work

Dual Cobra Head Fixtures

Mast-Mounted Fixtures

Scope

- Number of highway lighting fixture models that will be used in the Highway Lighting Project = 24
- Replace 1,877 roadway signs and remove lights at overhead signs
- Highway lighting work will be performed at night except for the high mast-mounted fixtures which will be upgraded during the day because will not require any traffic management

Department of Environmental Quality

Traffic control:

 Traffic control will account for about 40% - 50% of the total costs for the work not counting the material.

Project Costs - Option 1

- Cost (without signs)
 - Total project cost \$45,252,000
 - Annual savings \$3,297,000
 - Total savings over 20 years \$65,945,000

Project Costs – Option 2

Cost (with signs)

- Total project cost \$74,739,000
- Annual savings \$5,272,954
- Total savings over 20 years \$105,459,000

Challenges

- Locating and identifying the fixtures
- Who owns the light / Who pays the bill?
- What is the rate?
- How much detail to include in the survey?
- What is the condition of the fixture / pole / wiring?
- Determining operational / maintenance savings

Challenges

- •How much to budget for repairs?
- Cost of Traffic Control
- Multiple sources of information
- Surge protection needs
- LED requires new lighting standards
