

# International Battery SEMINAR & EXHIBIT

ADVANCED BATTERY TECHNOLOGIES FOR CONSUMER, AUTOMOTIVE &amp; MILITARY APPLICATIONS

March 21-24, 2016  
Fort Lauderdale Convention Center  
Fort Lauderdale, FL

## NREL Multiphysics Modeling Tools and ISC Device for Designing Safer Li-Ion Batteries

Advanced Vehicles & Fuels Research  
**Energy Storage**

Ahmad A. Pesaran, Ph.D.

Chuanbo Yang

National Renewable Energy Laboratory

Golden, Colorado

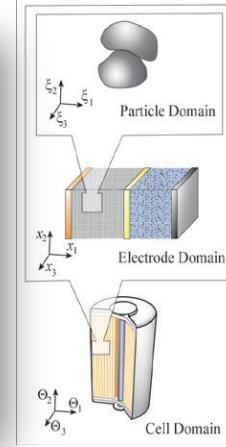

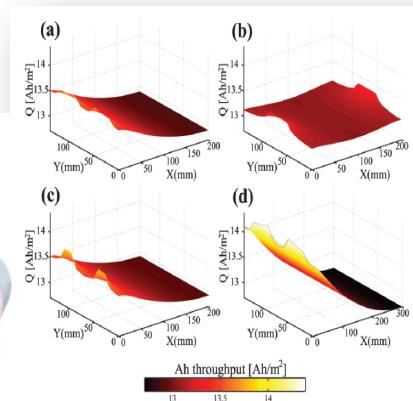

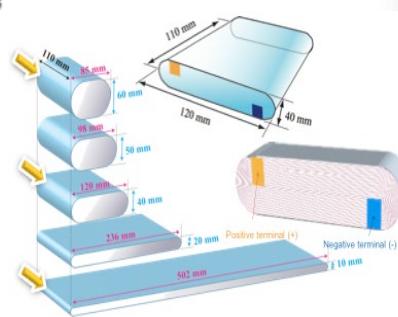

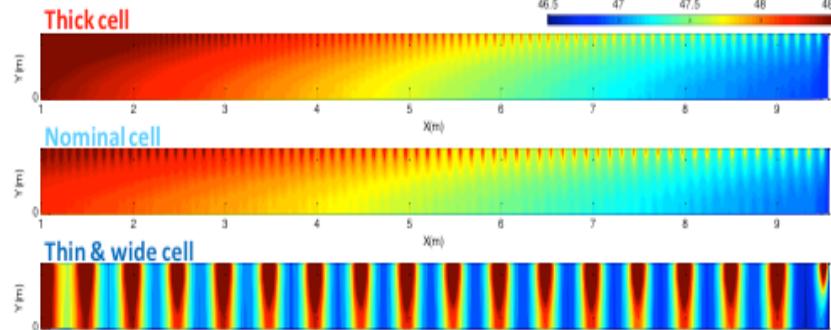

March 24, 2016

## BATTERY SAFETY

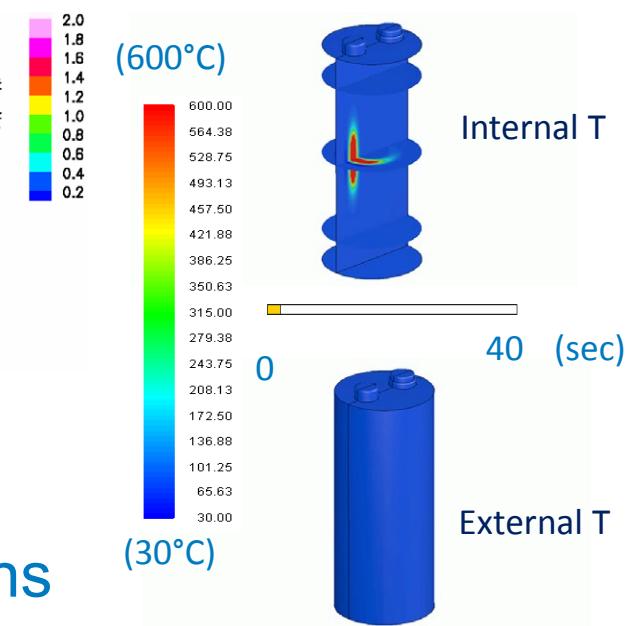

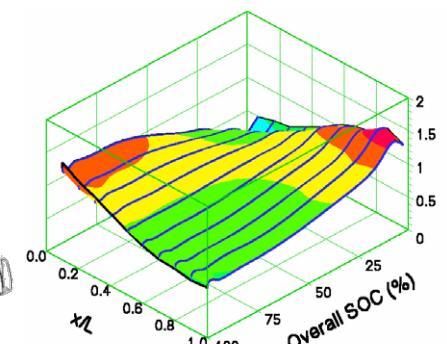

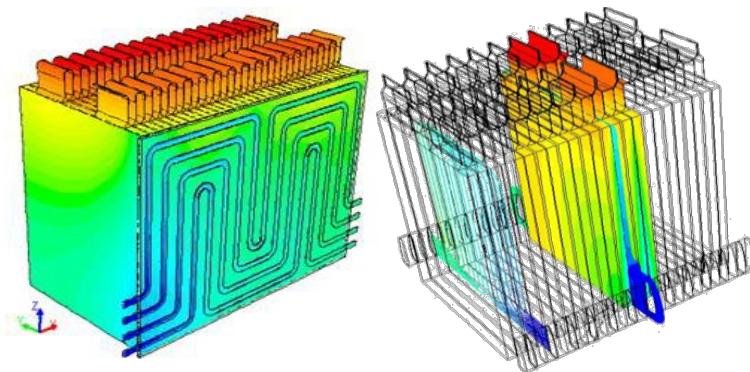

*Innovations to Improve Lithium Battery Safety from Cell to Systems*

# NREL Lithium Ion Battery Safety Portfolio - 1

- Electrochemical-thermal (ETC) models

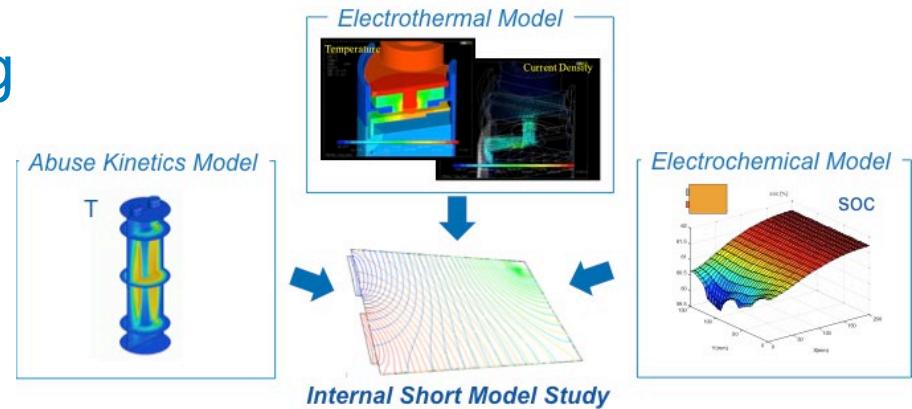

- Computer Aided Engineering for Batteries (CAEBAT)

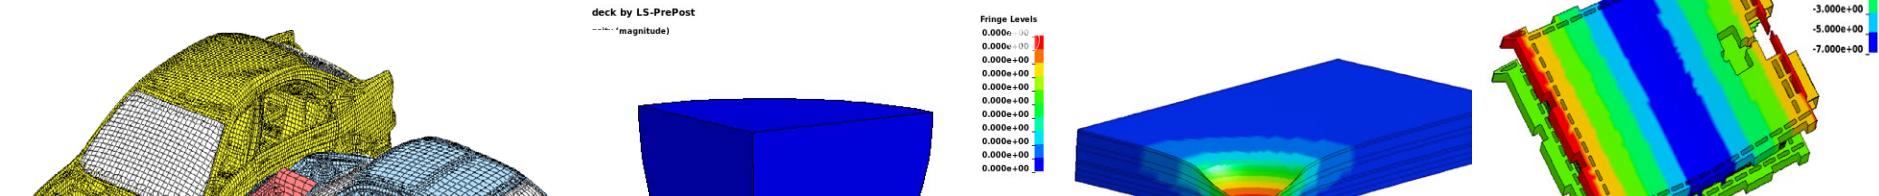

- Chemical kinetics reaction modeling
- Overheating (thermo-chemical) simulations

# NREL Lithium Ion Battery Safety Portfolio - 2

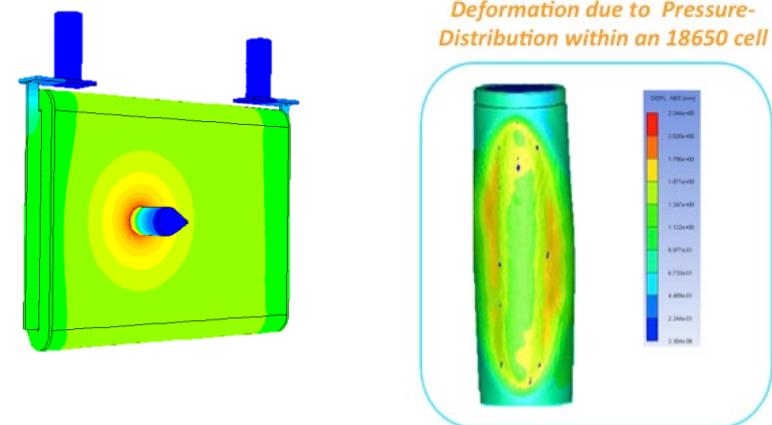

- Internal short circuit modeling

- Mechanical-ETC models for crush simulation

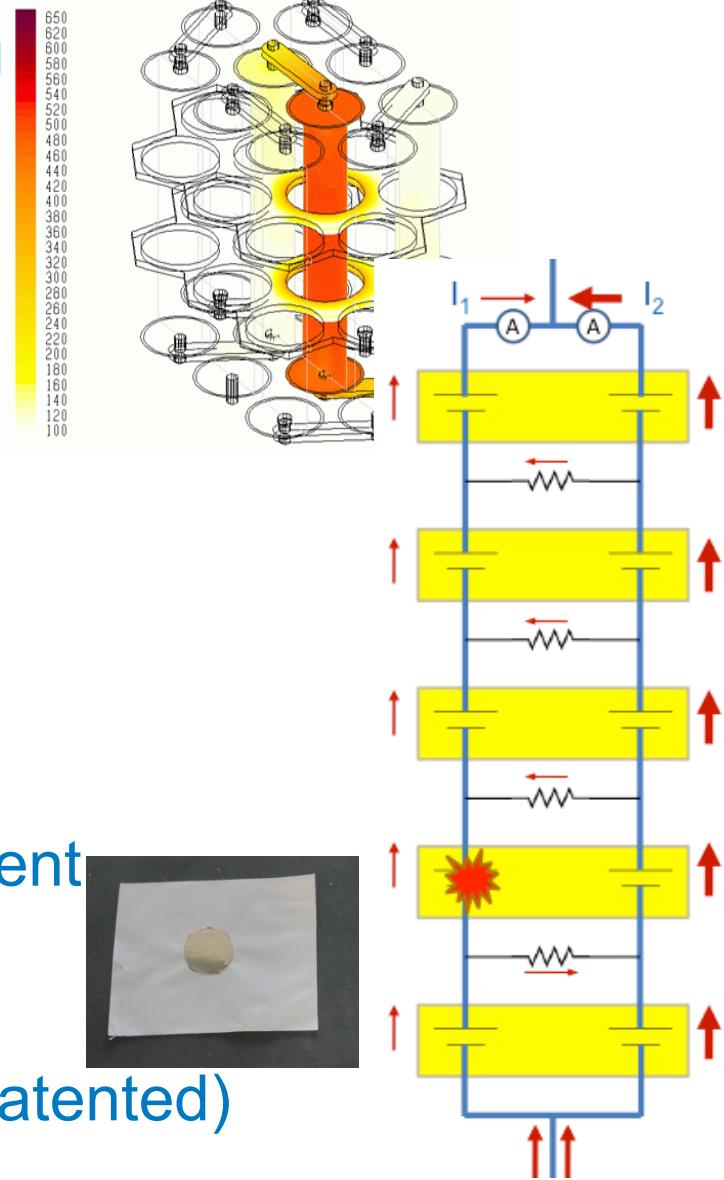

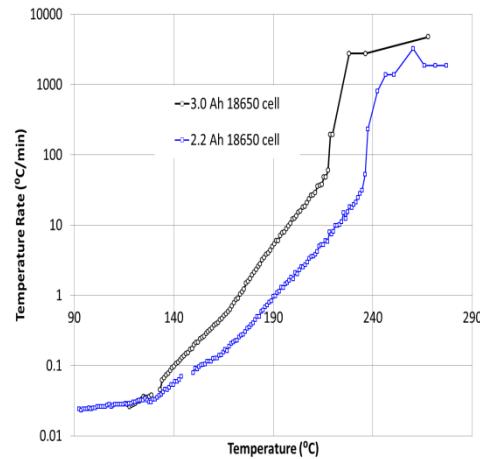

- Nail penetration modeling
- Overcharge modeling and testing

# NREL Lithium Ion Battery Safety Portfolio - 3

- Cell-Cell thermal propagation modeling
- Accelerating rate calorimeter testing

- Fail safe design architecture development
- Battery Internal Short Circuit Device (Patented)

# Objective/Outline

- Show how NREL safety tools supported our industry partner, Cadenza Innovation LLC

- Provide further details on
  - NREL Battery ISC Device
- Discuss validation study with Cadenza
  - Introduce the novel Cadenza architecture
  - Cell-to-cell thermal propagation modeling
  - Comparison with abuse experimental data
  - Demonstrate safe behavior of the Cadenza cell

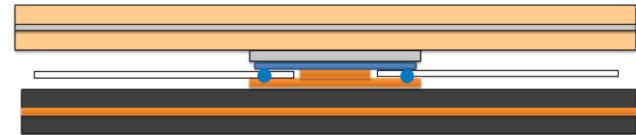

# Motivation for Battery ISC Device

- One changing safety issue is internal short circuit (ISC)
- New designs/materials R&D underway to improve ISC safety
- The challenge is how to evaluate these improvements
- Existing methods to trigger ISC (penetration or crush) perceived by many to be deficient and not representative
- NREL/NASA developed a very thin, implantable “thermal switch” to emulate ISC
- Use the ISC emulator to evaluate cell and module safety improvements

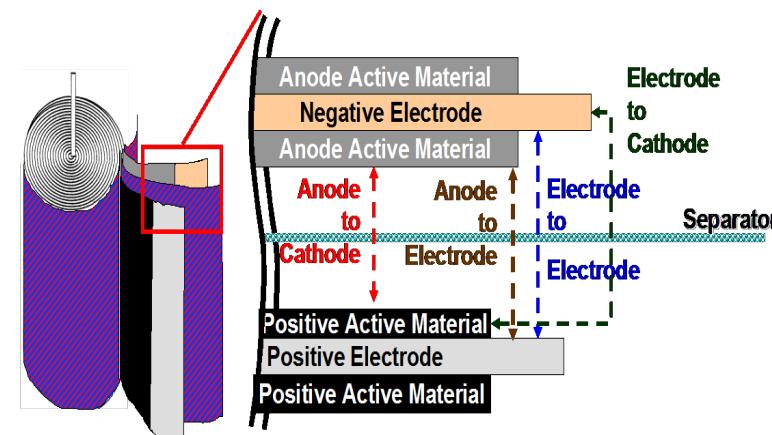

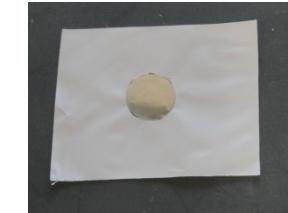

Come up with a better way to evaluate the behavior of cells due to manufacturing defects and field failures

# NREL Cell Internal Short Circuit Development

- Small, low-profile and implantable into Li-ion cells during assembly
- Key component is an electrolyte-compatible phase change material (PCM)
- The ISC device can be placed anywhere in a cell to create any of 4 types of ISC
- The ISC device is triggered by heating the cell above PCM's melting temperature (of about 40°C – 60°C)
- When PCM melts, a current path is created between positive and negative sides

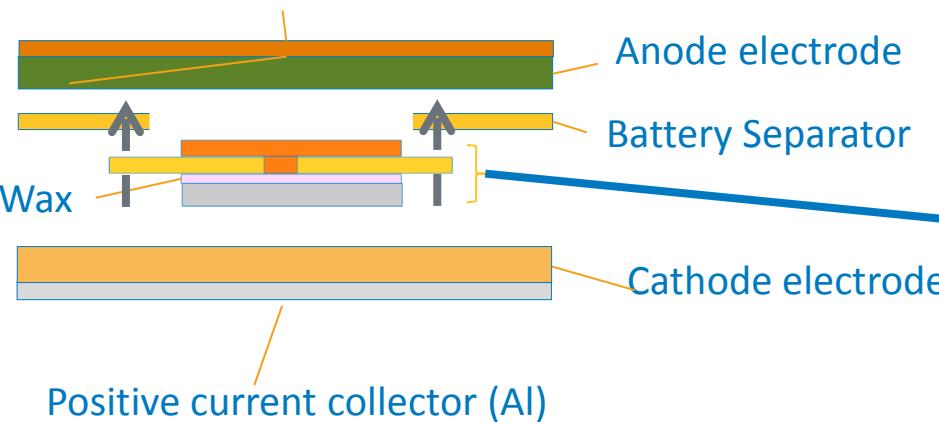

Patented ISC Device

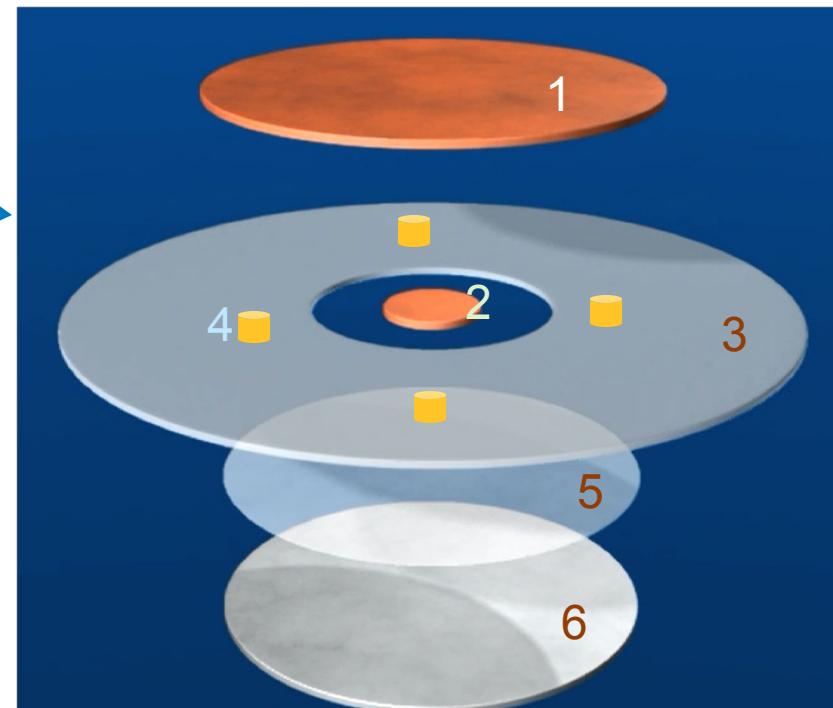

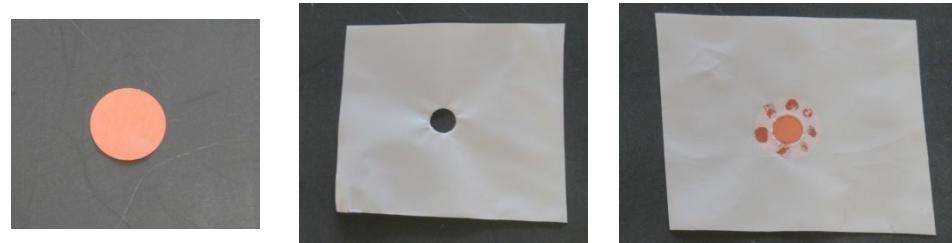

Spiral wound battery shown – can also be applied to prismatic batteries.

# NREL/NASA ISC Device Design

Negative current collector (Cu)

Graphics are not to scale  
and for illustration only

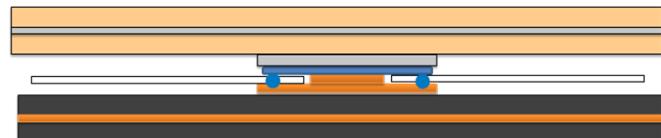

Top to Bottom:

1. Copper Disc
2. Copper Puck
3. Battery Separator
4. Adhesive/glue
5. Phase Change Material (wax)
6. Aluminum Disc

# ISC Device Example for a Type 1 Short

Anode active material to Cathode active material

Type 1

Cathode Active layer 37.0 microns

Cathode Active layer 37.0 microns

96.2 micron

Aluminum ISC disk 25.4 microns

Separator 20 microns

Wax layer ~20 microns

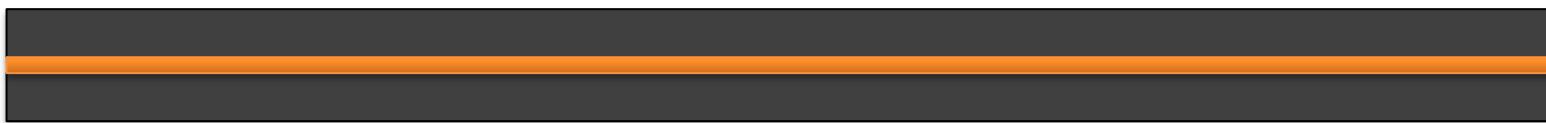

Copper ISC disk 25.4 microns

7/16" in Diameter

1/8" in Diameter

Anode Active Layer 41.7 microns

Anode Active Layer 41.7 microns

Patented

● Adhesive used to hold ISC together.

# Other Types of ISC

Cathode Active layer 37.0 microns

Cathode Active layer 37.0 microns

Cathode Current Collector

Aluminum ISC Pad 50.8 microns

7/16" in Diameter

Separator 20 microns

Wax layer ~20 microns

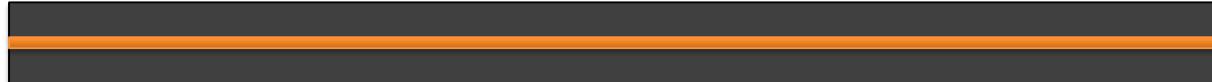

Cu Puck 25.4 microns

Copper ISC Pad 25.4 microns

1/8" in Diameter

Anode Active Layer 41.7 microns

Anode Active Layer 41.7 microns

Cathode Current Collector

Aluminum Disc

Separator 20 microns

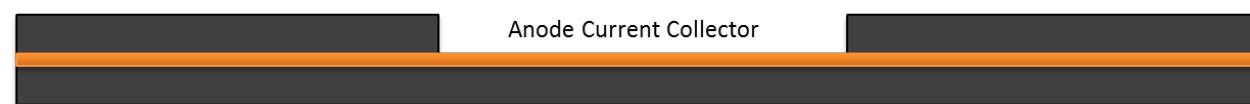

Wax layer ~20 microns

Cu Puck 25.4 microns

Anode Active to +ve  
Collector ISC  
**Type 2**

Collector to Collector ISC  
**Type 4**

# Testing Procedure for Cells with ISC Device

- NREL built ISC devices (in Golden, CO)
- Sent ISC device to E-one Moli (in Canada)
- E-one Moli implanted the ISC Device in 2.4Ah18650 Cylindrical Cell (NCA/graphite) during electrode winding
- E-one Moli assembled the cell and did formation
- Cell capacity did not change with ISC Device in them
- E-one Moli sent the modified cells to NASA (Houston, TX)
- NASA activated the ISC device by heating the cells to observe safety behavior

No Issues with Shipping of ISC Devices and Cells with ISC Device

# ISC Implantation – in E-one Moli Cells

# Type 2 (Al-Anode) Repeatability Study - 2014

Cell	Successful Formation	Successful Activation?	Thermal Runaway?
1	Yes	Yes	Yes
2	Yes	Yes	Yes
3	Yes	Yes	No
4	Yes	Yes	Yes
5	Yes	Yes	No
6	Yes	Yes	Yes
7	Yes	No	-
8	Yes	Yes	Yes
9	Yes	Yes	Yes
10	Yes	No	-

2 out of 10 ISCs did not activate (quality issues during fabrication)

6 out of 8 went to thermal runaway

# Type 2 ISC – 75% Repeatable Results - 2014

# Al to Anode (2) ISC Activation

# A Novel Li-ion Packaging Technology: High Energy, Low Cost, Safe

- **Cadenza's large prismatic cell technology for grid storage and PEV**

- Uses commoditized 26mm jelly rolls – “ease of supply”
- Proprietary housing material with thermal quenching ability developed by Morgan Advanced Materials
- Large cells ranging from 30Ah to 200Ah in development
- Low cost \$125/kWh
- Ability to survive internal short without cascading allows high energy density
- No expansion and contraction during cycling

- **US Department of Energy/ARPA-E Range Project Team**

- Cadenza Innovation LLC (Principal), Fiat Chrysler Automobiles, NREL, Samsung SDI NA, Morgan Advanced Materials, Magna Styer Battery Systems NA, Alcoa, Karotech LLC, and Impact Design LLC

# Using NREL's ISC Device Has Shown Non-Cascading Feature of Cells

- Intended application for ARPA-E project
  - Fiat 500e (24kWh original battery)
  - DEMO battery project: 38kWh (in the same volume)
- A Proof-of-concept cells to date
  - Single row cell (Gen-0 cell): 30Ah (NCM) & 36Ah (NCA);
  - 23 x jellyroll array: 80Ah (NCM) & 90Ah (NCA)
  - 24 x jellyroll array: 110 Ah prototype cell currently in validation

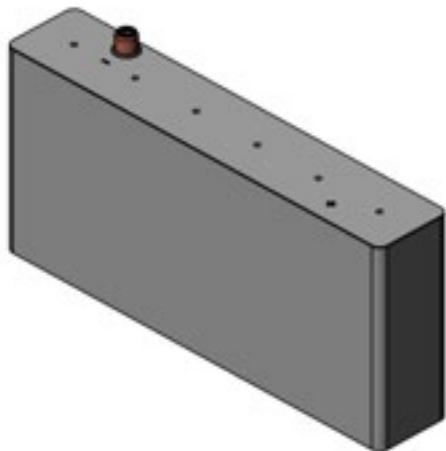

110 Ah demo cell

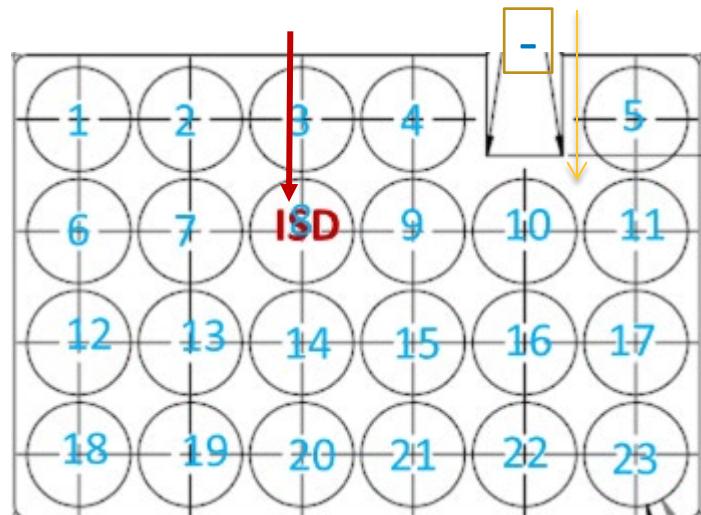

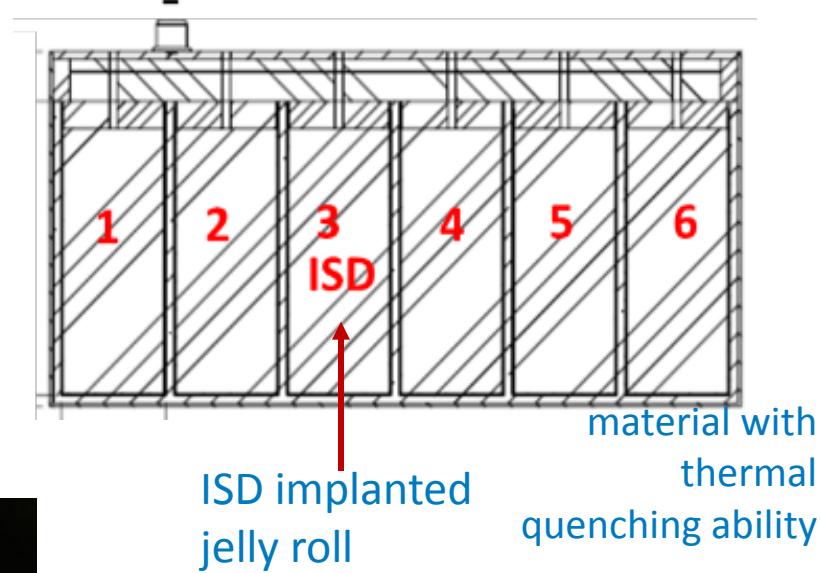

# ISC Device in A 30Ah Gen-0 NCM Cell and a 90 Ah Gen-1 NCA

One Cell with internal short circuit device implanted jelly rolls

30Ah Gen-0 cell  
consisting of 6 x  
5Ah NCM jelly rolls

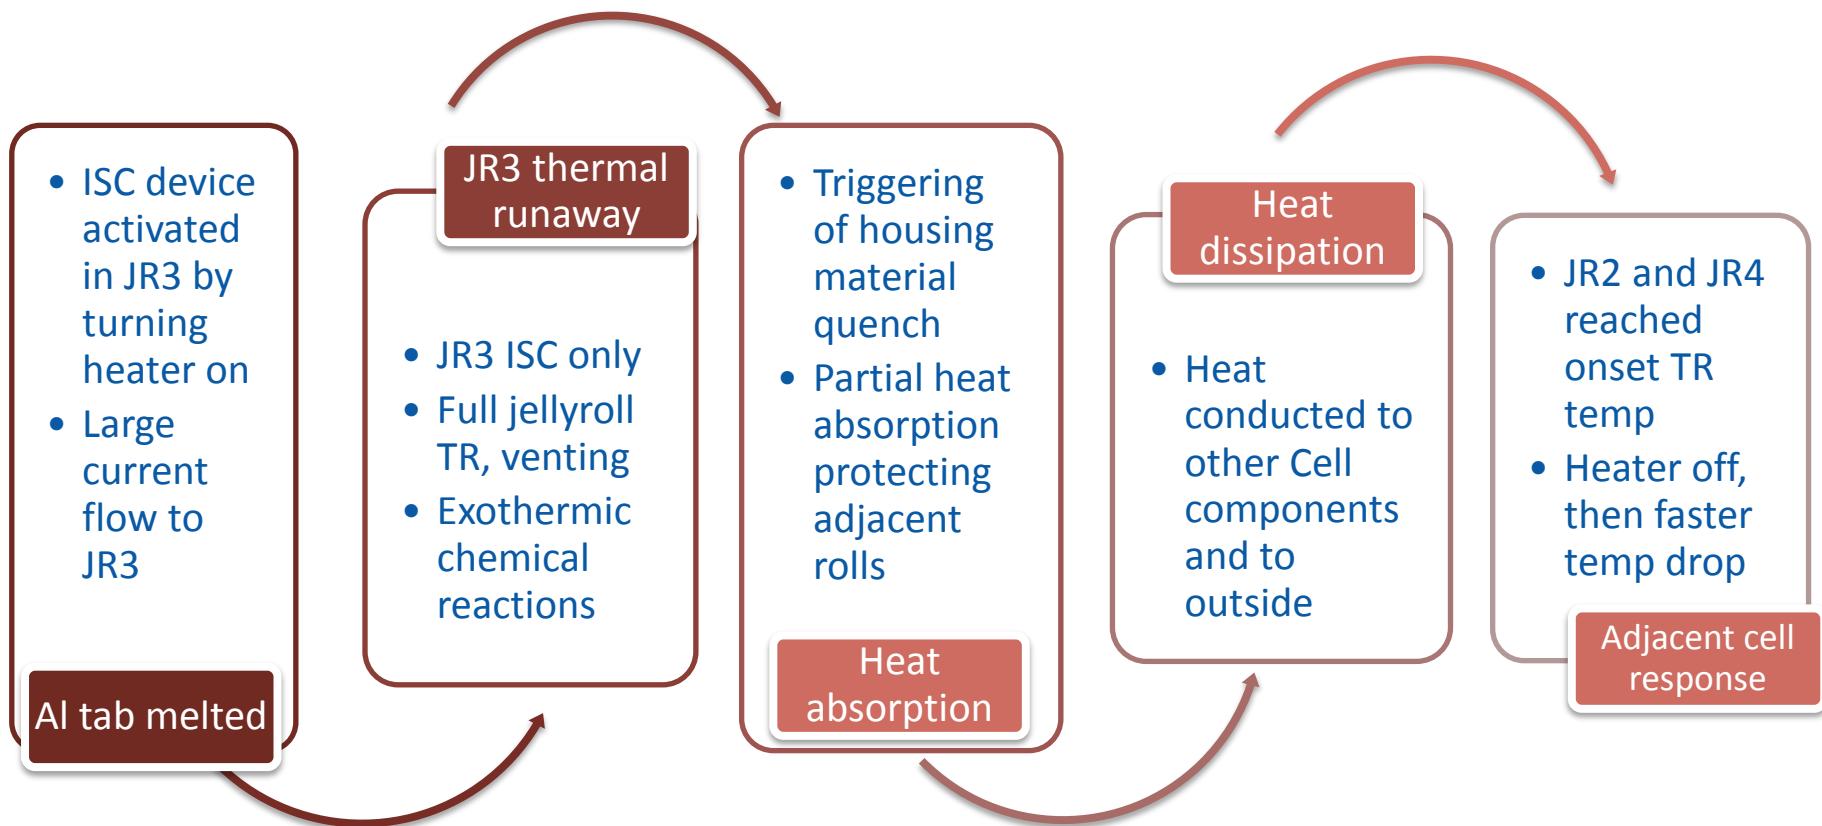

90 Ah Gen-1 cell  
consisting of 23 x  
3.9Ah NCA jelly rolls

# Modeled Thermal Behavior of Cell (ISC Triggered)

to see if housing material quenches a jelly roll under internal short

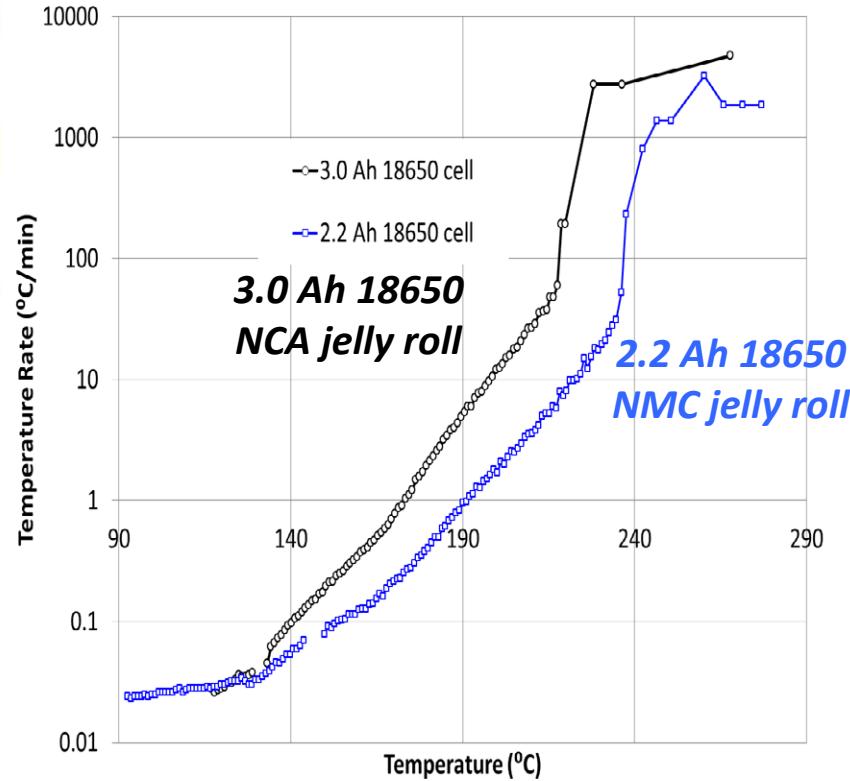

# ARC Testing – TR Heat Measurement for Model

**NREL's THT EV  
Accelerating Rate  
Calorimeter**

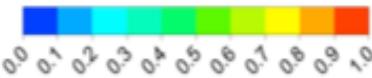

**3 Ah jelly roll rapid thermal runaway ( $>10^{\circ}\text{C}/\text{min}$ ) occurs  $20^{\circ}\text{C}$  lower than 2.2 Ah cell**

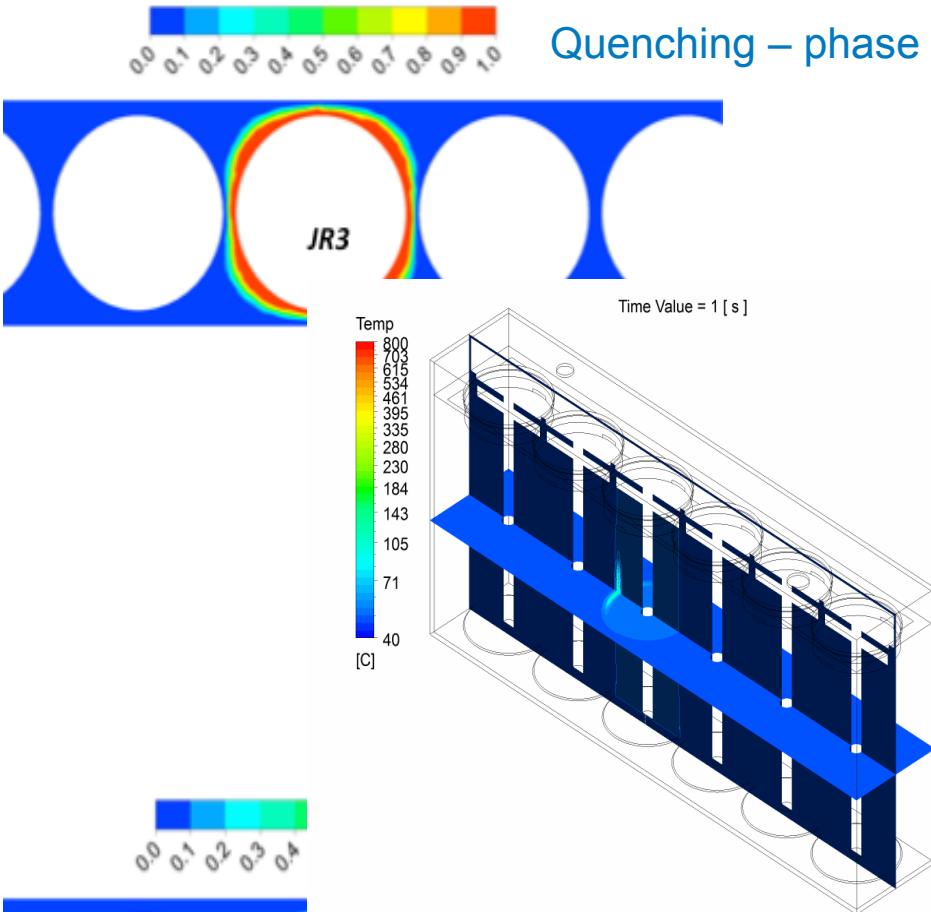

Jelly Roll	Weight (g)	Onset Temp ( $^{\circ}\text{C}$ )	Peak Temp( $^{\circ}\text{C}$ )	Venting Temp( $^{\circ}\text{C}$ )	Total Heat Generation (J)	Runaway Enthalpy(kJ/Ah)	Mass Change (g)
18650 3.0 Ah	45.23	111.6	932.4	128.0	31,002.91	10.33	13.27 (29.3%)
18650 2.2 Ah	43.34	91.5	782.7	143.7	25,016.76	11.37	8.97 (20.1%)

# Thermal Modeling Showed TR Was Not Cascaded

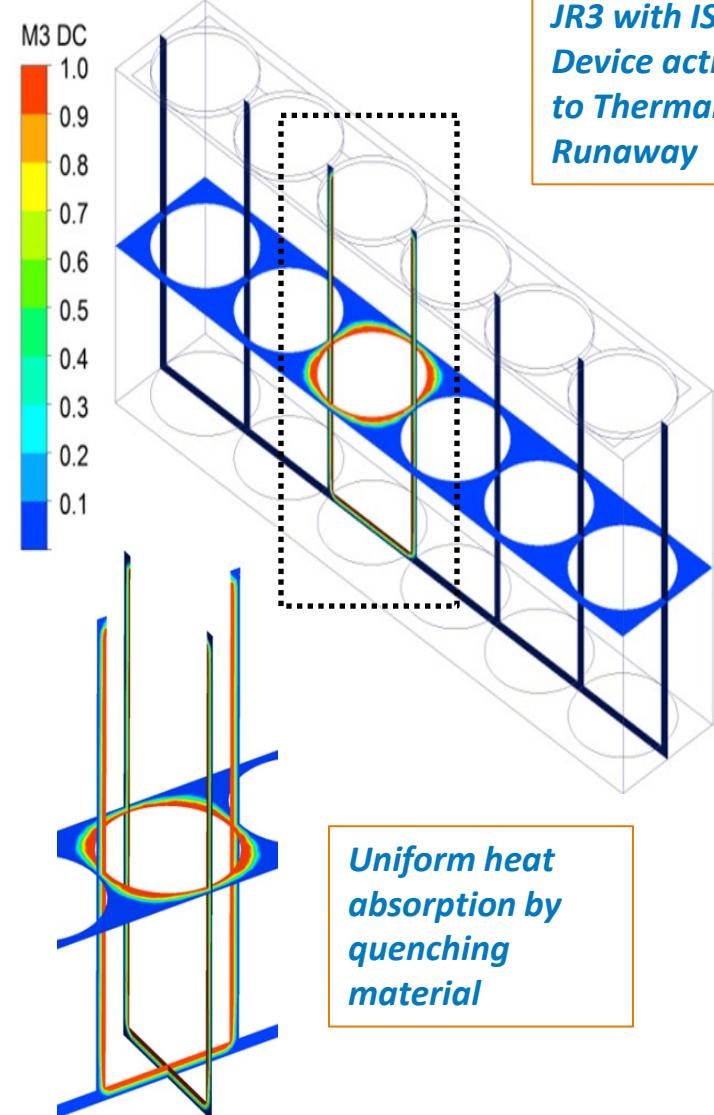

Quenching – phase 1

JR3

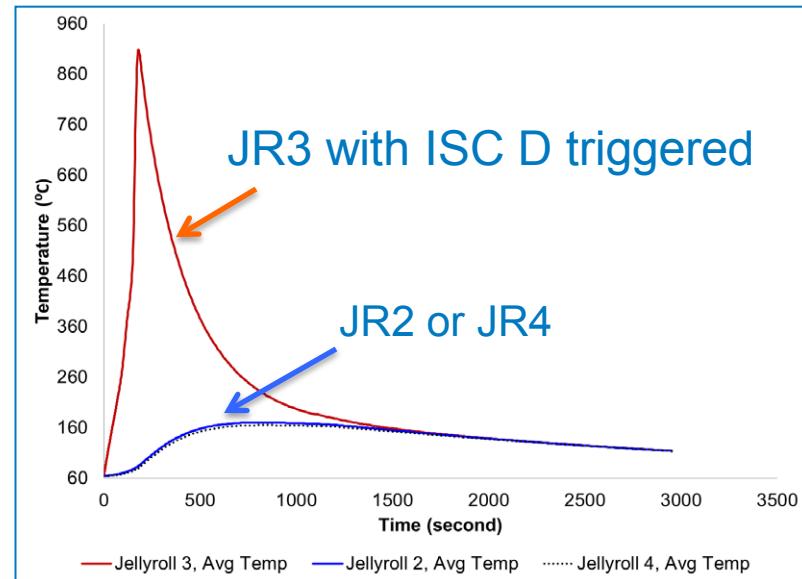

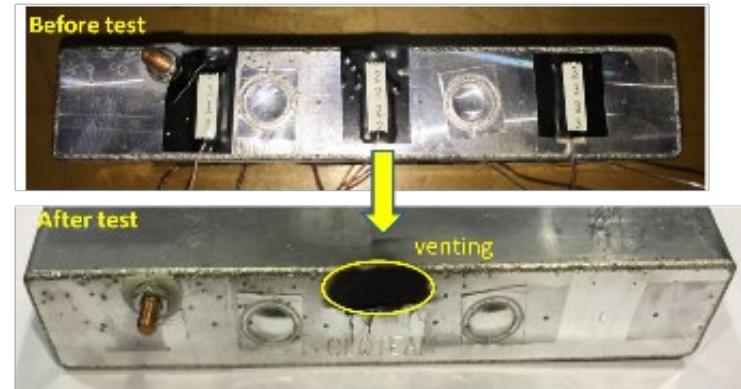

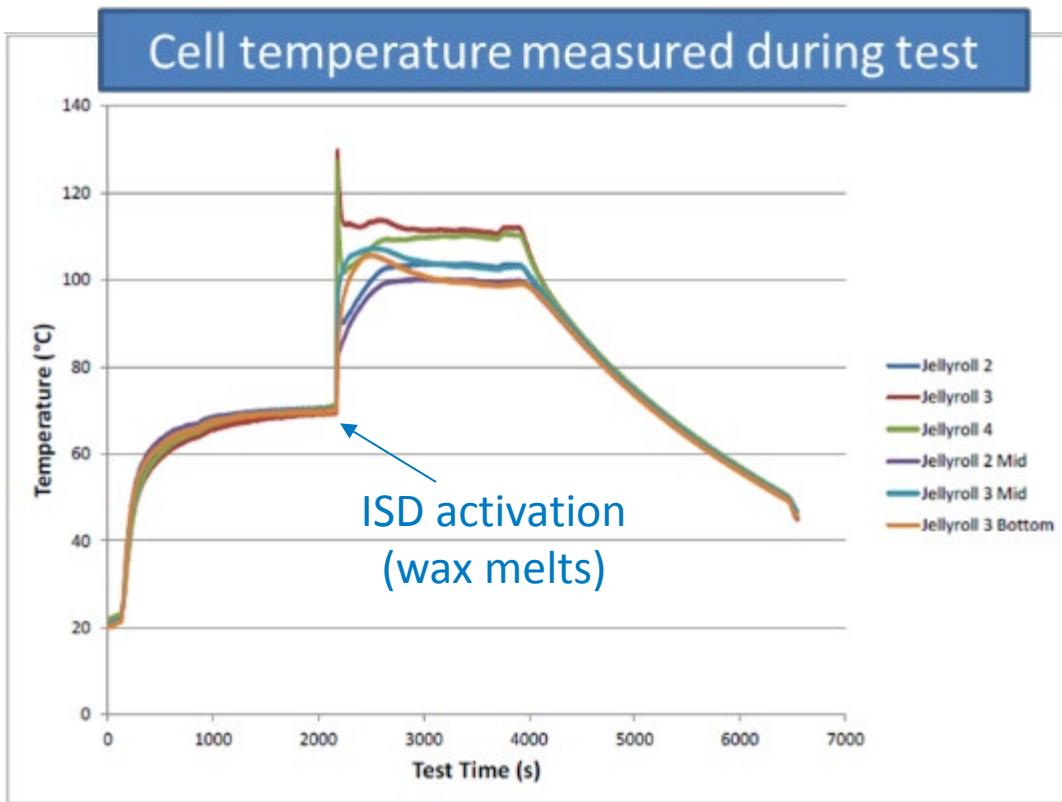

Quenching – phase 2

ANSYS  
R15.0

# Experiments Showed No Cascading TR

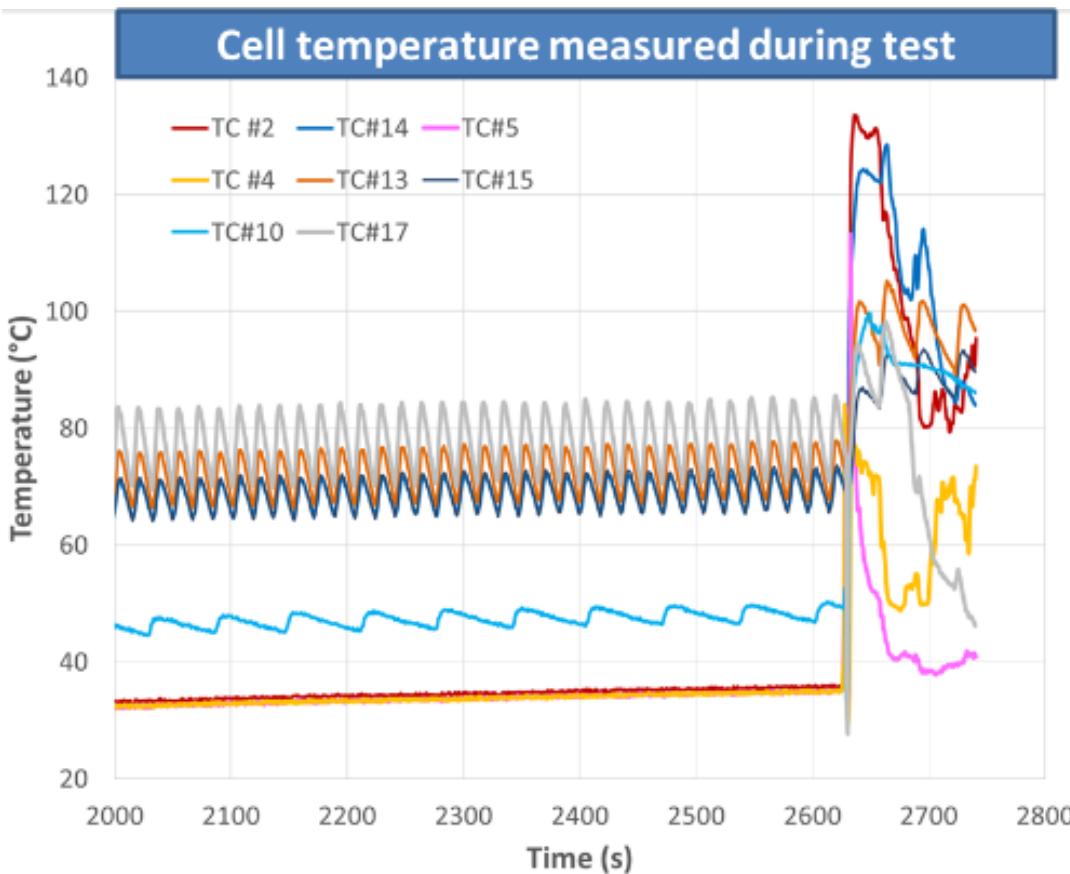

for 30Ah Gen-0 NCM cell after initiating the ISC Device

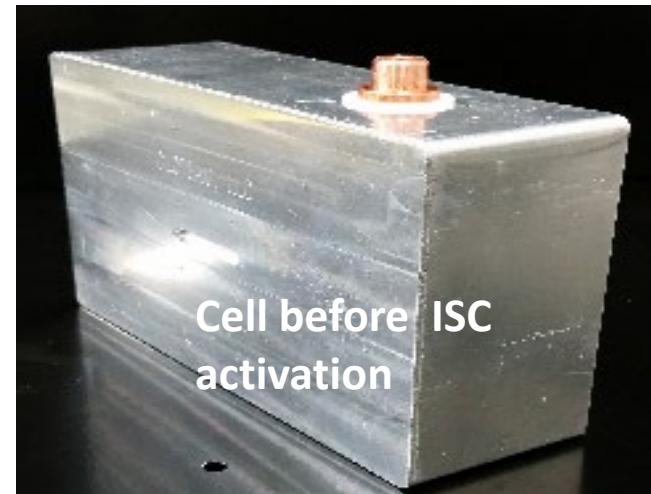

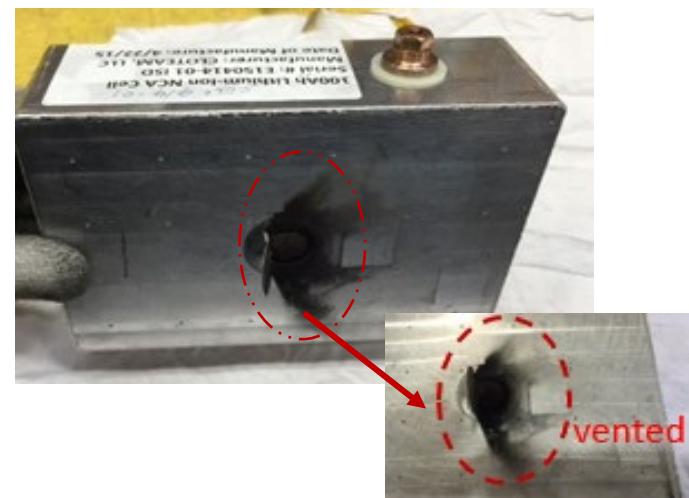

The cell only vented with a max measured cell surface temperature less than 138°C.

# Experiments Showed No Cascading TR

in the 90 Ah (NCA) cell after initiating the ISC Device

Front of cell after test

The cell only vented with a max measured cell surface temperature less than 138°C.

Cell before ISC activation

# Summary

- NREL has a portfolio of battery safety modeling to evaluate battery design ideas and propose safer designs
- NREL has developed an ISC Device to emulate internal short circuits in any cell format for four types of shorts
- ISC device is a research tool; repeatable and with consistent results
  - Must be implanted when prototyping cells
  - Not suitable for post-production cells
  - Can be used for cell-to-cell thermal runaway propagation study
- Our modeling showed non-cascading feature of a new cell uniquely packaged by Cadenza Innovation and ISC device has proven its safety
- NREL Battery ISC Device is available for use by new collaborators

# Thank You!

<http://www.nrel.gov/transportation/energystorage/>

- Funding for ISC Device and Model Development provided by DOE Vehicle Technologies Office
- Funding for project with Cadenza Innovation provided by DOE ARPA-E RANGE Program
- Appreciate the support and contributions by Cadenza Innovation
