

MENFRO -- MISSOURI STATE SOIL

Menfro Soil Profile

Surface layer: dark brown silt loam

Subsurface layer: brown silt loam

Subsoil - upper: brown silt loam

Subsoil - lower: dark brown silty clay loam

Substratum: brown silt loam

Menfro soils are used for corn, soybeans, small grain, and forage crops and for specialty crops of tobacco, grapes, vegetables, and fruits. These soils are desirable building sites. Most of the steeper areas support deciduous hardwood timber. These soils occur on about 780,000 acres in Missouri.

The first State Capitol building in St. Charles, the present State Capitol building, and the Governor's mansion were constructed on Menfro soils. The home of Daniel Boone and the first settlement west of the Mississippi River are in areas of Menfro soils. Hannibal, the home of Mark Twain, and Hermann, an historic German community, also are on Menfro soils.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at 202-720-2600 (voice and TDD). To file a complaint of discrimination, write USDA, Director, Office of Civil Rights, Room 326W, Whitten Building, 14th and Independence Avenue, SW, Washington, DC 20250-9410 or call 202-720-5964 (voice or TDD). *USDA is an equal opportunity provider and employer.*
