

## DEPARTMENT OF THE INTERIOR

## Fish and Wildlife Service

## 50 CFR Part 17

**Endangered and Threatened Wildlife and Plants; Review of Plant Taxa for Listing as Endangered or Threatened Species**

**AGENCY:** Fish and Wildlife Service, Interior.

**ACTION:** Notice of review.

**SUMMARY:** In this notice the Service presents an updated compilation of vascular plant taxa native to the United States that are being reviewed for possible addition to the List of Endangered and Threatened Plants under the Endangered Species Act of 1973, as amended (Act). Such taxa are generally referred to as listing candidates. The changes in this document from previous notices of review primarily involve: (1) The addition of taxa; (2) changes in category for some candidates; (3) the omission of taxa that have been listed under the Act; (4) the deletion of taxa identified as non-candidates in previous notices; and (5) additions and deletions in State distributions. While it is prudent to take candidate taxa into account during environmental planning, none of the substantive or procedural provisions of the Act apply to a species that is designated as a candidate for listing.

Through the publication of this notice, the Service also requests any additional status information that may be available. This information will be considered in preparing listing documents and future revisions and/or supplements to the notice of review. It will also assist the Service in monitoring changes in the status of listing candidates.

**DATES:** Comments are requested until the publication of an update of this notice, anticipated in early 1992.

**ADDRESSES:** Interested persons or organizations should submit comments to the appropriate Regional Director(s) below or to: Chief, Division of Endangered Species and Habitat Conservation, 400 Arlington Square, U.S. Fish and Wildlife Service, Washington, DC 20240. Comments and materials relating to this notice are available for public inspection by appointment in the Regional Offices listed below. Information relating to particular taxa in this notice can be obtained from the Service's Endangered Species Coordinator(s) in the appropriate Regional Office(s) listed below:

*Region 1.* California, Hawaii, Idaho, Nevada, Oregon, Washington, Commonwealth of the Northern Mariana Islands, and Pacific Territories of the United States.

Regional Director (FWE-SE), U.S. Fish and Wildlife Service, 1002 NE Holladay Street, Portland, Oregon 97232-4181, (503/231-6150 or FTS 429-6150).

*Region 2.* Arizona, New Mexico, Oklahoma, and Texas.

Regional Director (FWE-SE), U.S. Fish and Wildlife Service, P.O. Box 1306, Albuquerque, New Mexico 87103, (505/766-2321 or FTS 474-2321).

*Region 3.* Illinois, Indiana, Iowa, Michigan, Minnesota, Missouri, Ohio, and Wisconsin.

Regional Director (AE/SE), U.S. Fish and Wildlife Service, Federal Building, Fort Snelling, Twin Cities, Minnesota 55111, (612/725-3276 or FTS 725-3276).

*Region 4.* Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Puerto Rico, and the U.S. Virgin Islands.

Regional Director (FWE), U.S. Fish and Wildlife Service, The Richard B. Russell Federal Building, Suite 1276, 75 Spring Street, SW., Atlanta, Georgia 30303, (404/331-3583 or FTS 841-3583).

*Region 5.* Connecticut, Delaware, District of Columbia, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, Virginia, and West Virginia.

Regional Director (FWE), U.S. Fish and Wildlife Service, Suite 700, One Gateway Center, Newton Corner, Massachusetts 02158, (617/965-5100, ext. 316 or FTS 829-9316).

*Region 6.* Colorado, Kansas, Montana, Nebraska, North Dakota, South Dakota, Utah, and Wyoming.

Regional Director (FWE), U.S. Fish and Wildlife Service, P.O. Box 25486, Denver Federal Center, Denver, Colorado 80225, (303/236-7398 or FTS 776-7398).

*Region 7.* Alaska.

Regional Director (FWE), U.S. Fish and Wildlife Service, 1101 East Tudor Road, Anchorage, Alaska 99503, (907/786-3505 or FTS 907/786-3505).

**FOR FURTHER INFORMATION CONTACT:** Endangered Species Coordinator(s) in the appropriate Regional Office(s), or Dr. Janet E. Hohn, Chief, Branch of Endangered Species Listing and Recovery, U.S. Fish and Wildlife Service, Washington, DC 20240, (703/358-2171 or FTS 921-2171).

**SUPPLEMENTARY INFORMATION:****Background**

The Endangered Species Act of 1973, as amended (Act), requires the Service to identify species of wildlife and plants that are endangered or threatened, based on the best available scientific and commercial data. The Act directed the Secretary of the Smithsonian Institution to prepare a report on endangered and threatened plant species, which was published as House Document No. 94-51. The Service published a notice on July 1, 1975 (40 FR 27823), in which it announced that more than 3,000 native plant taxa named in the Smithsonian's report and other taxa added by the 1975 notice would be reviewed for possible inclusion in the List of Endangered and Threatened Plants. The 1975 notice was superseded on December 15, 1980 (45 FR 82479), by a new comprehensive notice of review for native plants that took into account the earlier Smithsonian report and other accumulated information. On November 28, 1983 (48 FR 53640), a supplemental plant notice of review noted changes in the status of various taxa. A complete update of the plant notice was published on September 27, 1985 (50 FR 39526). All previous plant notices of review are superseded by the current revised notice.

**Current Notice**

This notice reflects the Service's current judgment of the possible vulnerability of native plant taxa. Taxa in the notice are assigned to several status categories, noted in the "Category" column at the left side of the table. As in the 1985 plant notice, all taxa are listed in one table, with coded entries to indicate current status. Plant taxa that have been added to the Lists of Endangered and Threatened Wildlife and Plants (Lists) at 50 CFR 17.12 are no longer candidate notice of review subjects. The latest reprinting of the Lists (currently January 1, 1989) is available from the Service. Former plant candidates that have been identified in previous notices in categories 3B or 3C (see definitions below) are not repeated here, except in cases where new synonymies have been identified. For example, certain Hawaiian taxa previously identified in category 3C now incorporate other taxa previously identified in categories 1, 2, or 3B (see *Manual of the Flowering Plants of Hawaii*, University of Hawaii Press, in Press).

Codes for the major categories of taxa in the new notice are explained below:

PE—Taxa already proposed to be listed as endangered.

PT—Taxa already proposed to be listed as threatened.

S—Synonyms.

1—Taxa for which the Service has on file enough substantial information on biological vulnerability and threat(s) to support proposals to list them as endangered or threatened species. Development and publication of proposed rules on these taxa are anticipated; however, because of the large number of category 1 taxa, it will take several years to clear the backlog.

Also included in category 1 are taxa of known vulnerable status in the recent past that may already have become extinct. These plants retain a high priority for addition to the List, if extant populations are confirmed. Such possibly extinct taxa are indicated by an asterisk (\*). Double asterisks (\*\*) indicate taxa believed to be extinct in the wild but known to be extant in cultivation.

2—Taxa for which there is some evidence of vulnerability, but for which there are not enough data to support listing proposals at this time. Again, taxa that are possibly extinct are indicated by an asterisk (\*) and those that are known to exist only in cultivation are marked by double asterisks (\*\*). Further biological research and field study usually will be necessary to ascertain the status of the taxa in category 2, and some of the taxa are of uncertain taxonomic validity. It is likely that some category 2 candidates will not warrant listing, while others will be found to be in greater danger of extinction than some taxa in category 1. The Service hopes that this notice will encourage necessary research on vulnerability, taxonomy, and/or threats for these taxa. In submitting such information, contributors are encouraged to use the status report guidelines of Henifin *et al.*, pages 261–282, in L.E. Morse and M.S. Henifin, editors, *Rare Plant Conservation*, 1981, The New York Botanical Garden, Bronx, New York. Copies of these guidelines also are available from the Service.

Taxa that once were considered for listing as threatened or endangered but are no longer under such consideration are included in category 3. Taxa in category 3 are not candidates for listing. Such taxa are further divided into three subcategories, to indicate the reason(s) for their removal from consideration:

3A—Taxa for which the Service has persuasive evidence of extinction. If rediscovered, such taxa might acquire high priority for listing. At this time, however, the best available information indicates that the taxa in this subcategory, or the habitats from which they were known, have been lost.

3B—Names that, on the basis of current taxonomic understanding (usually as represented in published revisions and monographs), do not represent distinct taxa meeting the Act's definition of "species." Such supposed taxa could be reevaluated in the future on the basis of new information.

3C—Taxa that have proven to be more abundant or widespread than previously believed and/or those that are not subject to any identifiable threat. If further research or changes in habitat indicate a significant decline in any of these taxa, they may be reevaluated for possible inclusion in categories 1 or 2.

The taxa in categories 1 and 2 of this notice are considered by the Service as candidates for possible addition to the List of Endangered and Threatened Plants. The Service encourages their consideration in environmental planning, such as in environmental impact analysis under the National Environmental Policy Act of 1969 (implemented at 40 CFR parts 1500–1508). Information regarding the range, status, and habitat needs of such species is available from the Service's Regional Offices (see "ADDRESSES" above).

#### Summary of Status Categories

For ease of reference, numerical totals for candidates in the various status categories are provided below:

Proposed for Listing—26 (including PE—17 and PT—9)

Category 1—527 (including 1\*—58 and 1\*\*—4)

Category 2—1,572 (including 2\*—29 and 2\*\*—1)

Category 3—809 (including 3A—94, 3B—444, and 3C—271)

This and previous plant notices have identified a total of 1,990 category 3 taxa (including 3A—94, 3B—712, and 3C—1,184).

#### Relationship to Petition Requirements

Almost all category 1 and 2 plants are subject to petitions for listing under the Act. The Service's first plant notice on July 1, 1975 (40 FR 27823), indicated that the original Smithsonian plant report had been accepted as a listing petition under the terms of the Act. A revision of the Smithsonian's report was published in 1978 as a book: E. S. Ayensu and R. A. DeFilipps, *Endangered and Threatened Plants of the United States*, Smithsonian Institution and World Wildlife Fund, Washington, D.C. Because this revision suggested some additional taxa as endangered or threatened, and recommended that the Secretary of Interior officially so determine their

status, it was also accepted as a listing petition.

The 1982 amendments to the Act required specific and timely responses to listing petitions. In particular, section 4(b)(3)(B) of the Act was amended to require a finding within one year of receiving a listing petition as to whether the listing is (1) warranted (if so, the finding is accompanied by publication of a proposed listing rule), (2) warranted but precluded by other pending proposals of higher priority, or (3) not warranted. In the case of a "warranted but precluded" finding, another finding is required one year later, again falling into one of the three allowable classes. The cycle then repeats each year until petitioned taxa are either proposed for listing or a final "not warranted" finding is made. After the 1982 amendments, for the purpose of making annually recycled findings, the Service made an administrative decision to treat all candidate species of plants as if their listings had been petitioned prior to 1982. This action was taken in order to avoid the necessity of keeping separate track of, and annually making individual findings on, the several thousand species of plants subject to listing petitions. Consequently, each year since 1983, annual petition findings required by section 4(b)(3)(B) of the Act have been made by category; Categories 1 and 2 of each notice of review correspond to a finding of "warranted but precluded," and Category 3 corresponds to a finding of "not warranted."

#### Relationship to 1988 Endangered Species Act Amendments

In 1988, Section 4(b)(3)(C) of the Act also was amended. The amendment requires the Service to implement a system for monitoring the status of all species for which a petition finding of "warranted but precluded" has been made. It also directs the Service to make prompt use of the emergency listing provisions of section 4(b)(7) if the well-being of any such species is at significant risk. As noted above, the great majority of plant candidates, including well over 1,000 taxa in category 2 as well as more than 500 in category 1, have been determined to be "warranted but precluded" for listing at this time. The Service has implemented new procedures to ensure that the status of these candidate plants will be monitored in accordance with this amendment. This notice will serve as a basis for that monitoring effort.

The actual distribution of category 1 taxa and the nature of threats to them are better known, for the most part, than

those of category 2 taxa. Accordingly, the status of category 1 taxa will, in general, be monitored more effectively than that of category 2 taxa. However, a status designation as: (1) Increasing, (2) stable, (3) declining, (4) extinct, or (5) unknown will be determined on a regular basis for each listing candidate species and for those taxa thought to be extinct.

**Request for Information**

The Service hereby requests that any further information on the vulnerable taxa named in this notice be submitted as soon as possible and on a continuing basis, including:

- (1) Data indicating that a taxon should be assigned to a category other than the one in which it appears;
- (2) Nominations of taxa not included;
- (3) Recommendations of area as critical habitat for a candidate taxon, or indications that a proposal of critical habitat would not be prudent for a taxon;
- (4) Documentation of threats to any of the included taxa;
- (5) Information concerning the degrees of threats;

(6) Identification of taxonomic or nomenclatural changes for any of the taxa;

(7) Appropriate common name suggestions; or

(8) Identification of mistakes, such as errors in the indicated historical distributions.

The Service will consider all information received in response to this notice. Substantive changes will be published in the **Federal Register** on a two-year cycle.

**Organization of the Table**

The following table is arranged alphabetically by names of genera and species. Synonyms have been provided when necessary to avoid confusion. In some cases, taxa that have not yet been formally described in the scientific literature have been included. Such taxa are identified by a generic name followed by "sp. (ssp., var.) nov./ined." Following the scientific name of each species, subspecies, or variety are a family designation and any common name. The families now generally follow D. J. Mabberley, 1987, *The Plant Book*, Cambridge University Press (only fern families are changed significantly from

previous notices). Known historical ranges are given on the right for all included taxa, usually indicated by abbreviations for States. Some taxa may no longer occur in some of the areas shown. For each taxon, the assigned status category appears on the left.

**Author**

This notice was compiled from evaluations by the Service's Fish and Wildlife Enhancement staff botanists and biologists in the Service's Regional Offices and Field Stations. It was compiled and edited by the Division of Endangered Species and Habitat Conservation in the Washington Office.

**List of Subjects in 50 CFR Part 17**

Endangered and threatened wildlife, Fish, Marine mammals, Plants (agriculture).

**Authority**

This notice is published under the authority of the Endangered Species Act (16 U.S.C. 1531 *et seq.*).

Dated: February 7, 1990.

**Richard N. Smith,**

*Acting Director, U.S. Fish and Wildlife Service.*
