Wetlands in the National Wetlands Inventory

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

DATA LIMITATIONS

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

DATA EXCLUSIONS

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tubercid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

DATA PRECAUTIONS

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

Section 2722
Engineered Surface Drainage Products

GENERAL
PVC surface drainage inlets shall be of the inline drain type as indicated on the contract drawing and referenced within the contract specifications. The ductile iron grates for each of these fittings are to be considered an integral part of the surface drainage inlet and shall be furnished by the same manufacturer. The surface drainage inlets shall be as manufactured by Nyloplast a division of Advanced Drainage Systems, Inc., or prior approved equal.

MATERIALS
The inline drain required for this contract shall be manufactured from PVC pipe stock, utilizing a thermo-molding process to reform the pipe stock to the furnished configuration. The drainage pipe connection stubs shall be manufactured from PVC pipe stock and formed to provide a watertight connection with the specified pipe system. This joint height shall conform to ASTM D3212 for grates for drain and sewer plastic pipe using flexible elastomeric seals. The flexible elastomeric seals shall conform to ASTM F477. The pipe bell spigot shall be joined to the inline drain body by use of a swage mechanical joint. The raw material used to manufacture the pipe stock that is used to manufacture the inline drain body and pipe stubs of the surface drainage inlets shall conform to ASTM D1784 cell class 12454.

The grates furnished for all surface drainage inlets shall be ductile iron grates for sizes 8", 10", 12", 15", 18", 24" and 30" shall be made specifically for each fitting so as to provide a round bottom flange that closely matches the diameter of the surface drainage inlet. Grates for drain basins shall be capable of supporting H-20 wheel loading for traffic areas or H-10 loading for pedestrian areas. 12" and 15" square grates will be hinged to the frame using pins. Metal used in the manufacture of the castings shall conform to ASTM A536 grade 70-50-05 for ductile iron. Grates shall be provided painted black.

INSTALLATION
The specified PVC surface drainage inlet shall be installed using conventional flexible pipe backfill materials and procedures. The backfill material shall be crushed stone or other granular material meeting the requirements of class 1 or class 2 material as defined in ASTM D2321. Bedding and backfill for surface drainage inlets shall be well placed and compacted uniformly in accordance with ASTM D2321. The drain basin body will be cut at the time of the final grade. No drainage inlets shall be well placed and compacted uniformly in accordance with ASTM D2321. For H-20 load rated installations, a concrete ring will be poured under and back, stone or concrete block will be required to set the grate to the final grade height. For H-10 load rated installations, a concrete ring will be poured under and back, stone or concrete block must be designed taking into consideration local soil conditions, traffic loading, and other applicable design factors. For other installation considerations such as migration of fines, ground water, and soil foundations refer to ASTM D2321 guidelines.

5. ALL TENDONS SHALL BE ENCASED IN A SLIPPAGE SHEATHING WHICH SHALL BE MANUFACTURED BY A PROCESS THAT PROVIDES WATERTIGHT ENCASEMENT OF THE CORROSION INHIBITING COATING MATERIAL (P/T COATING) SO AS TO PREVENT THE INTERNAL MIGRATION OF ANY WATER. SHEATHING SHALL BE OF SUFFICIENT STRENGTH AND DURABILITY TO RESIST DAMAGE DURING NORMAL FABRICATION, TRANSPORTATION, INSTALLATION AND CONCRETE PLACEMENT OPERATIONS. MINIMUM SHEATHING THICKNESS SHALL BE 0.05" TEARS IN THE SHEATHING SHALL BE REPAIRED BY REPLACING THE P/T COATING AND RESTORING THE WATER TIGHTNESS. TENDONS SHALL BE PROTECTED DURING SHIPPING AND HANDLING TO AVOID DAMAGE TO THE TENDON SHEATHING DURING TRANSPORTATION AND OFFLOADING AT THE JOBSITE AND AVOID EXPOSURE TO DEICING SALTS OR ANY OTHER FORM OF CORROSIVE ELEMENTS.
6. ALL TENDONS SHALL BE SHOP-FABRICATED WITH PRE-ASSEMBLED FIXED OR DEAD END ANCHORAGES. PLASTIC POCKET FORMERS SHALL BE USED AT ALL STRESSING ENDS TO RECESS THE ANCHOR CASTINGS SO THAT THE REQUIRED COVER IS ACHIEVED.
7. ALL ANCHORAGES, COUPLERS AND MISCELLANEOUS HARDWARE SHALL BE APPROVED BY GOVERNING AGENCIES AND THE SER. ANCHORAGES FOR UNBONDED TENDONS SHALL BE RECESSED A MINIMUM OF 2" WITH TWO CONTINUOUS #4 BACKUP BARS PLACED BEHIND THE ANCHORAGES AND CAPABLE OF DEVELOPING AT LEAST 95% OF THE ACTUAL ULTIMATE STRENGTH OF THE TENDON, UNLESS NOTED OTHERWISE.
8. ALL TENDONS SHALL BE MARKED, SHIPPED TO THE JOB SITE AND INSTALLED IN A SEQUENCE CONSISTENT WITH THE DESIGN PLACEMENT SHOWN ON THE DRAWINGS. TENDONS AND SLAB REINFORCEMENT SHALL BE PLACED IN THE FOLLOWING SEQUENCE, UNLESS NOTED OTHERWISE:

DEVELOPMENT

LAP SPICE

REFER TO "HOOKED REINFORCEMENT DEVELOPMENT LENGTH SCHEDULE" WHEN STRAIGHT DEVELOPMENT LENGTH TENSION CANNOT BE ACCOMMODATED IN THE CONCRETE SECTION.

LAP SPICES IN ADJACENT BARS SHALL BE STAGGERED A MINIMUM OF 24" INCHES. WELDED OR MECHANICAL SPICES IN ADJACENT BARS SHALL BE STAGGERED A MINIMUM OF 30 INCHES.

NOTES:

- TABULATED DEVELOPMENT AND LAP SPICE LENGTH ARE BASED ON REINFORCING YIELD STRENGTH F_y=60ksi, NORMAL WEIGHT CONCRETE AND CLASS B LAPS.
- TOP BARS ARE DEFINED AS HORIZONTAL BARS WITH MORE THAN 12 INCHES OF FRESH CONCRETE CAST IN THE MEMBER BELOW THE DEVELOPMENT LENGTH OR SPICE.
- WHEN DIFFERENT BAR DIAMETERS ARE SPICED, USE LARGER BAR LAP SPICE LENGTH.
- ALL TABULATED VALUES ARE MINIMUM LENGTHS. IN CASE OF CONFLICT WITH THE PLANS, SECTIONS OR DETAILS, USE THE LONGER LENGTH.
- FOR TENSION DEVELOPMENT AND TENSION LAP SPICE LENGTHS, THE LIGHTWEIGHT CONCRETE FACTOR IS 1.30. THE EPOXY-COATED BAR FACTOR FOR TENSION DEVELOPMENT AND TENSION LAP SPICE LENGTHS IS 1.2. THIS FACTOR INCREASES TO 1.5 WHEN THE COVER OF THE BARS IS LESS THAN 3d_b OR THE CLEAR SPACING IS LESS THAN 6d_b. TABULATED VALUES FOR DEVELOPMENT AND LAP LENGTHS IN TENSION SHALL BE FACTORED BY 1.5 WHEN THE CLEAR COVER IS LESS THAN d_b AND THE CLEAR SPACING IS LESS THAN d_b (AND THERE ARE STIRRUPS OR TIES ALONG l_d). TABULATED DEVELOPMENT AND LAP LENGTHS IN TENSION FOR BUNDLED BARS SHALL BE FACTORED BY 1.2 FOR 3 BAR BUNDLES AND 1.33 FOR 4 BAR BUNDLES.
- WELDED AND/OR MECHANICAL SPICES MAY BE USED AT THE GENERAL CONTRACTORS OPTION PROVIDED THAT THE SPICE IS CAPABLE OF DEVELOPING AT LEAST 125 PERCENT OF THE YIELD STRENGTH OF THE LARGER BAR IN TENSION. THE GENERAL CONTRACTOR SHALL USE WELDED AND/OR MECHANICAL SPICES WHERE LAP SPICES WOULD CREATE BAR CONGESTION THAT WOULD INTERFERE WITH THE PLACING AND FINISHING OF THE CONCRETE. SPICES IN "TENSION-TIE" MEMBERS SHALL BE FULL WELDED OR FULL MECHANICAL SPICES. WHERE WELDED AND/OR MECHANICAL SPICES ARE TO BE USED, THE GENERAL CONTRACTOR SHALL SUBMIT FULL DATA ON THE PROPOSED MATERIALS, PROCEDURES AND INSTALLATION INSTRUCTIONS TO THE ENGINEER FOR REVIEW AS A SHOP DRAWING SUBMISSION.
- ALL STRAIGHT BAR DEVELOPMENTS AND SPICES SHALL BE IN ACCORDANCE WITH THE LATEST EDITION OF ACI 318. ALL WELDED SPICES SHALL BE IN ACCORDANCE WITH THE LATEST EDITION OF AWS D1.4.
- d_b = BAR DIAMETER.

- ALL TABULATED VALUES ARE MINIMUM LENGTHS. IN CASE OF CONFLICT WITH THE PLANS, SECTIONS OR DETAILS, USE THE LONGER LENGTH.
- ADJUST TABULATED LENGTHS BY THE FOLLOWING FACTORS WHERE APPLICABLE. NOTE THAT THE FACTORS ARE CUMULATIVE:
 - REINFORCING BAR YIELD STRENGTH OTHER THAN 60ksi: (f_y/60,000).
 - LIGHTWEIGHT CONCRETE: 1.3
 - EPOXY-COATED REINFORCEMENT: 1.2
