

Department of Defense

Report on 2005 Defense Base Closure and Realignment Implementation

November 2013

**Office of the Deputy Under Secretary of
Defense (Installations and Environment)**

Preparation of this report/study cost the
Department of Defense a total of approximately
\$78,000 for the 2013 Fiscal Year.

Appendices

Appendix 1: Defense Environmental Restoration Program (DERP) Issues

Appendix 2: Additional (Non-DERP) Environmental Remediation Issues

Appendix 3: Section 2907, BRAC Act of 1990

Introduction

The National Defense Authorization Act for Fiscal Year 2002 amended the Defense Base Closure and Realignment Act of 1990 (Public Law 101-510) to authorize a round of closures and realignments in 2005. The Commission forwarded its report and recommendations to the President on September 8, 2005. On September 15, 2005, the President approved the Commission's recommendations and forwarded its report to Congress. Since Congress did not enact a joint resolution of disapproval within the review period provided by the BRAC Act, on November 9, 2005, the Department became legally obligated to close and realign all installations recommended for closure and realignment in the Commission's report. In accordance with the BRAC Act, the Department completed actions to implement the recommendations.

This report addresses reporting requirements specified in Section 2907 of the BRAC Act, as amended by Section 2831 of the National Defense Authorization Act for Fiscal Year 2006 (P.L. 109-163) and Section 2711 of the National Defense Authorization Act for Fiscal Year 2009 (P.L. 110-417).

As was the case in prior BRAC rounds and in prior reports for this round the annual budget justification material submitted separately by the Comptroller was developed to satisfy the requirements of paragraphs (1) and (2) of Section 2907 of the BRAC Act, specifically the FY 2014 material submitted by the DoD Components that provided detailed information by realignment and closure package, broken out by one-time implementation costs, anticipated revenues from land sales, and expected savings.

Section 2831 of the National Defense Authorization Act for Fiscal Year 2006 amended section 2907 by adding new reporting requirements. The amended section 2907 is provided in Appendix 3. This report provides the information required by paragraphs three through seven. Specifically, this report provides:

- a description of the closure actions carried out at each BRAC 2005 installation and the current status of the closure of the installation, including whether—
 - a redevelopment authority has been recognized by the Secretary of Defense for the installation;
 - the screening of property at the installation for other Federal use has been completed; and
 - a redevelopment plan has been agreed to by the redevelopment authority for the installation;
- a description of redevelopment plans for each BRAC 2005 installation;
- the quantity of property remaining to be disposed of at each BRAC 2005 installation as part of its closure;
- the quantity of property already disposed of at each BRAC 2005 installation;

- a list of the Federal agencies that have requested property during the screening process for each BRAC 2005 installation, including the date of transfer or anticipated transfer of the property to such agencies, the acreage involved in such transfers, and an explanation for any delays in such transfers;
- a list of known environmental remediation issues at each BRAC 2005 installation, including the acreage affected by these issues, an estimate of the cost-to-complete such environmental remediation, and the plans (and timelines) to address such environmental remediation; and
- the date of completion of all closure actions at each BRAC 2005 installation.

As stated in the Deputy Under Secretary of Defense (Installation and Environment)'s (Acting) congressional testimony, BRAC 2005 was by far the largest round undertaken by the Department. The BRAC Commission made 222 recommendations, resulting in 24 major closures, 24 major realignments and 765 lesser actions. These actions affected some 125,000 military personnel at more than 800 locations across the United States. The cost of implementation totaled \$35.1 billion, including \$24.5 billion for military construction and another \$10.6 billion to move personnel and equipment, outfit facilities and carry out environmental clean-up. Although the implementation cost far exceeded that of any prior round, so too do the savings. Of all the efficiency measures that the Department has undertaken over the years, BRAC is perhaps the most successful and significant. BRAC 2005 is producing a total of about \$4 billion in annual recurring savings. This amount represents the additional costs that the Department would incur every year for base operating support, personnel and leasing costs had we not had BRAC.

Although elimination of excess capacity and dollar savings was an objective, the focus of the 2005 BRAC round was on aligning our infrastructure with our military strategy so as to maximize war fighting capacity and efficiency. BRAC 2005 enabled the Department to reset its infrastructure to accommodate the return of forces from Europe and Korea; restructure its medical platforms; markedly increase joint basing and other cross-Service efforts; accommodate the Army's modularization; and revitalize the Army's reserve and guard infrastructure. These efforts were needed, and they have contributed significantly to the Department's effectiveness. However, they necessarily required substantial investments.

The large number of transformational recommendations, particularly recommendations to establish joint operations, present significant implementation challenges. To meet these challenges, the Department developed Business Plans that laid out the requisite actions, timing of those actions, and the costs and savings associated with implementing each recommendation.

The Department has also completed screening for property transfer to other federal agencies, recognized Local Redevelopment Authorities (LRAs), and worked with communities impacted by both closure and growth. Most data reported for each

installation data contained in this report is as of December 1, 2012. Environmental remediation cost-to-complete data is consistent with the FY14 budget submission to Congress.

Report Organization

Installations impacted by BRAC 2005 recommendations (including leased installations) are provided by Military Department by state, and Defense Agency. For each closing installation the report provides individual installation summaries consisting of:

- The BRAC Commission number and title for all recommendations affecting the installation.
- The date when the DoD completed the BRAC recommendation.
- Whether a LRA has been recognized by the Secretary of Defense. A LRA may be recognized to prepare a redevelopment plan when there is surplus property to be disposed (32 CFR Part 174).
- Whether the screening of property at the installation for other federal agency use has been completed.
- Whether a redevelopment plan has been agreed to by the redevelopment authority. The deadline for submittal of a redevelopment plan by a LRA may be extended through the Director of the Office of Economic Adjustment (32 CFR Part 176).
- If a redevelopment plan does exist, its description. For this section there are three types of descriptions:
 - A description of the redevelopment plan.
 - No Surplus Property. This indicates that because there is no surplus property available for disposal, no redevelopment plan is necessary. This response also includes installations that have property excess to DoD, but the property is slated for transfer to another federal agency, and is therefore, unavailable to the community. In addition, this description applies to leased locations and other types of property arrangements where the property is not owned by DoD and as such cannot be transferred by DoD.
 - Pending. The plan has not been finalized and, therefore, a description cannot be provided.
- The total quantity of property remaining to be disposed. This section reflects the government-owned acreage reported by the Military Departments that has been screened through a formal "Notice of Availability" under the General Services Administration-delegated disposal authorities across the components of the Department of Defense and determined as "excess" to the Department's needs. This data reflects what was reported by the Military Departments as of September 30, 2012. Where the "excess" determination has not been finalized, the acreage published in the component's "Notice of Availability" as of the date of the publication of the report is represented.

- The quantity of property already disposed. This is shown as “none” for most installations.
- A list of the federal agency(s) that have requested property during the screening process, including the date of anticipated transfer, the acreage involved, and an explanation of any delays to transfer. Federal agency(s) have expressed a request for property by either a Notice of Intent or a GSA Form 1334/DD 1354 application. A Notice of Intent request is not a binding agreement and subsequent reports will reflect only GSA Form 1334/DD 1354 application requests.
- The overall completion date for all closure actions at the installation. This is the last date of the last action necessary to complete the closure. This equates to the date on which all functions have transferred from the installation and activities cease except for caretaker actions. It does not include time necessary for environmental restoration or property disposal. Note: the Department’s business plans tracked implementation at the recommendation level which often affects more than one installation. The plans contain an overall completion date. This date is the point in time in which all actions (e.g. personnel performing a function are moved, construction at receiving installations) in the business plan are completed.
- If an installation has environmental remediation issues, those are detailed at Appendices 1 and 2.

Environmental Remediation Issues and Cost-to-Complete

Appendix 1 provides the list of known environmental remediation issues at each installation closed by BRAC 2005 that are part of the Defense Environmental Restoration Program (DERP) as defined by DoD’s *2012 DoD Manual 4715.20, DERP Management*. The data presented for each installation includes the known environmental remediation issues to be addressed under the DERP, an estimate of the cost-to-complete for DERP eligible environmental restoration activities, the number of acres affected by remediation issues, the plans and timelines for addressing these remediation issues, the affected media, remedy types, and contaminant types identified for prioritization ranking purposes

Below is a Department-level summary of the estimated cost-to-complete for all known environmental remediation actions for the DERP sites at installations impacted by the 2005 BRAC round.

| BRAC Category | Cost-to-Complete (\$ Millions) |
|-----------------|--------------------------------|
| BRAC Round 2005 | 331.9 |

The DERP cost-to-complete for closing installations is funded through the BRAC account. Cost-to-complete estimates are based on the best-available information at the time of their development and represent bottom-up, site level aggregations.

Additionally, the cost-to-complete estimates address all site-level DERP requirements at the entire installation.

Appendix 2 includes each type of remediation issue at each installation affected by the BRAC 2005 actions that are not included in the DERP, as defined by the *2012 DoD Manual 4715.20, DERP Management*. For each issue Appendix 2 includes the type of remediation issue; its description; acreage affected; an estimate of the cost-to-complete; a description of the plans to address each issue; and timelines for addressing each remediation issue in terms of estimated start and completion dates. The types of “non-DERP” environmental remediation issues are categorized as follows:

- Operational Ranges
- Asbestos
- Landfill Closure
- Tank Closure
- Building Decontamination (DECON)
- Radiological Decontamination
- Permits to Site Closeouts
- Notice of Violation
- Other

Definitions for each of these categories are located in Appendix 2.

California

Navy Broadway Complex, CA

Commission recommendation(s) affected by this installation:

| Number | Title |
|--------|--------------------------------------|
| 192 | Navy Broadway Complex, San Diego, CA |

Closure or realignment actions taken as of December 1, 2012:

On November 22, 2006, the Navy entered into a long term lease that provides for the redevelopment of the Navy Broadway Complex under the authority granted by section 2732 of Public Law 99-661, the National Defense Authorization Act for fiscal year 1987. Accordingly, the Commission recommendation to close the Broadway Complex if the Navy did not enter into such a lease on or before January 1, 2007, has no further effect. All action on this recommendation is complete.

Defense Finance and Accounting Service (DFAS)

DFAS - Oakland, CA

Commission recommendation(s) affected by this installation:

| Number | Title |
|--------|--|
| 145 | Defense Finance and Accounting Service |

Closure or realignment actions taken as of December 1, 2012:

An initial site survey visit was conducted in November 2005. The purpose of the survey was to develop a site profile for DFAS locations. The visit consisted of data collection for business processes, workforce size, and systems applications. This information will be used for workload and workforce transition to the enduring sites. DFAS planned for site closure and mission realignment. DFAS conducted an All Hands briefing in December 2005 to inform employees about the BRAC closure schedule, impacts to employees, and upcoming events. Union officials for sites closing in FY06 were notified in December 2005. Voluntary Early Retirement Act (VERA) / Voluntary Separation Incentive Program (VSIP) windows and employee registration in the Priority Placement Program (PPP) were scheduled for February 2006. Human Resources scheduled Reduction in Force (RIF) notices to be issued in March 2006. DFAS, Oakland closed in June 2006.

Has a local redevelopment authority been recognized by the Secretary of Defense? No

Has the screening of property for other Federal Agency use been completed?

No property to transfer

Has a redevelopment plan been agreed to by the redevelopment authority? No

Description of redevelopment plan:

None

Closure or realignment actions taken as of December 1, 2012:

DFAS continued planning for site closure and mission realignment. DFAS conducted an All Hands briefing in December 2005 to inform employees about the BRAC closure schedule, impacts to employees, and upcoming events. Human Resources surveyed employees to identify those who are willing to relocate to enduring sites. An initial site assessment was conducted in December 2005. The assessment included the collection of data for facilities, business processes, workforce size, and systems applications. This information will be used for planning workload migration to the enduring sites. Human Resources surveyed employees to identify those who are willing to relocate to enduring sites. DFAS, St. Louis closed in June 2007.

Has a local redevelopment authority been recognized by the Secretary of Defense? No

Has the screening of property for other Federal Agency use been completed?
No property to transfer

Has a redevelopment plan been agreed to by the redevelopment authority? No

Description of redevelopment plan:
None

Quantity of property remaining to be disposed: 0.0

Quantity of property already disposed: 0.0

Federal Agencies requesting property during screening process; and if applicable, the anticipated transfer date and the amount of property to be transferred:

DFAS - San Antonio, TX

Commission recommendation(s) affected by this installation:

| Number | Title |
|--------|--|
| 145 | Defense Finance and Accounting Service |

Closure or realignment actions taken as of December 1, 2012:

An initial site survey visit was conducted in November 2005. The purpose of the survey was to develop a site profile for DFAS locations. The visit consisted of data collection for business processes, workforce size, and systems applications. This information will be used for workload and workforce transition to the enduring sites. DFAS planned for site closure and mission realignment. DFAS conducted an All Hands briefing in December 2005 to inform employees about the BRAC closure schedule, impacts to employees, and upcoming events. Union officials for sites closing in FY06 were notified in December 2005. Voluntary Early Retirement Act (VERA) / Voluntary Separation Incentive Program (VSIP) windows and employee registration in the Priority Placement Program (PPP) were scheduled for February 2006. Human Resources scheduled Reduction in Force (RIF) notices to be issued in March 2006. DFAS, San Antonio closed in August 2006.

8520 Newington Building, Newington, VA

Commission recommendation(s) affected by this installation:

| Number | Title |
|--------|--|
| 168 | National Geospatial-Intelligence Agency Activities |

Closure or realignment actions taken as of December 1, 2012:

NGA successfully completed construction of its new facility located at the Fort Belvoir North Area, Springfield, Virginia on 31 August 2011. Primary NGA ITF activities located at the 8520 Newington Building were successfully moved to this new facility by 12 September 2011. Follow on decommissioning was completed on 28 December 2012. NGA-vacated space was turned over as of 31 Dec 2012 to the ITF support contractor for closeout actions.

Has a local redevelopment authority been recognized by the Secretary of Defense? No

Has the screening of property for other Federal Agency use been completed?

No property to transfer

Has a redevelopment plan been agreed to by the redevelopment authority? No

Description of redevelopment plan:

None

Quantity of property remaining to be disposed: 0.0

Quantity of property already disposed: 0.0

Federal Agencies requesting property during screening process; and if applicable, the anticipated transfer date and the amount of property to be transferred:

| Federal Agency | Anticipated Transfer Date | Acres to be Transferred |
|----------------|---------------------------|-------------------------|
| None | None | None |

Explanation for any delays in transfer of property:

None

Known environmental remediation issues: None

Acres affected by remediation issues: None

Estimated cost to complete environmental remediation: None

Plans and timelines to address environmental remediation: None

Estimated completion date for all closure or realignment actions: Sep 30 2012

Department of Defense

**Report on 2005 Defense Base
Closure and Realignment
Implementation**

November 2013

**Office of the Deputy Under Secretary of
Defense (Installations and Environment)**

Appendix I

Defense Environmental Restoration Program (DERP) Issues

Defense Environmental Restoration Program (DERP) Issues

The Department of Defense (DoD) manages approximately 28 million acres of land, including thousands of military facilities and former defense properties throughout the United States and abroad to support its national security mission. This built and natural infrastructure provides DoD with the capability to organize, train, and equip the nation's military to perform its mission. DoD's environmental programs, such as the DERP, sustain, restore, and modernize its infrastructure to maintain readiness and protect human health and the environment.

Through the DERP, the Department complies with environmental cleanup laws, such as the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), also known as Superfund. Under the DERP, DoD addresses contamination at active installations, Base Realignment and Closure (BRAC) installations, and Formerly Used Defense Sites properties in the United States through the:

- **Installation Restoration Program (IRP):** Addresses contamination from a hazardous substance or pollutant or contaminant.
- **Military Munitions Response Program (MMRP):** Addresses sites (referred to as munitions response sites or MRSs) known or suspected to contain unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC). MRSs do not include operational ranges, operating storage and manufacturing facilities, and where munitions result from combat.

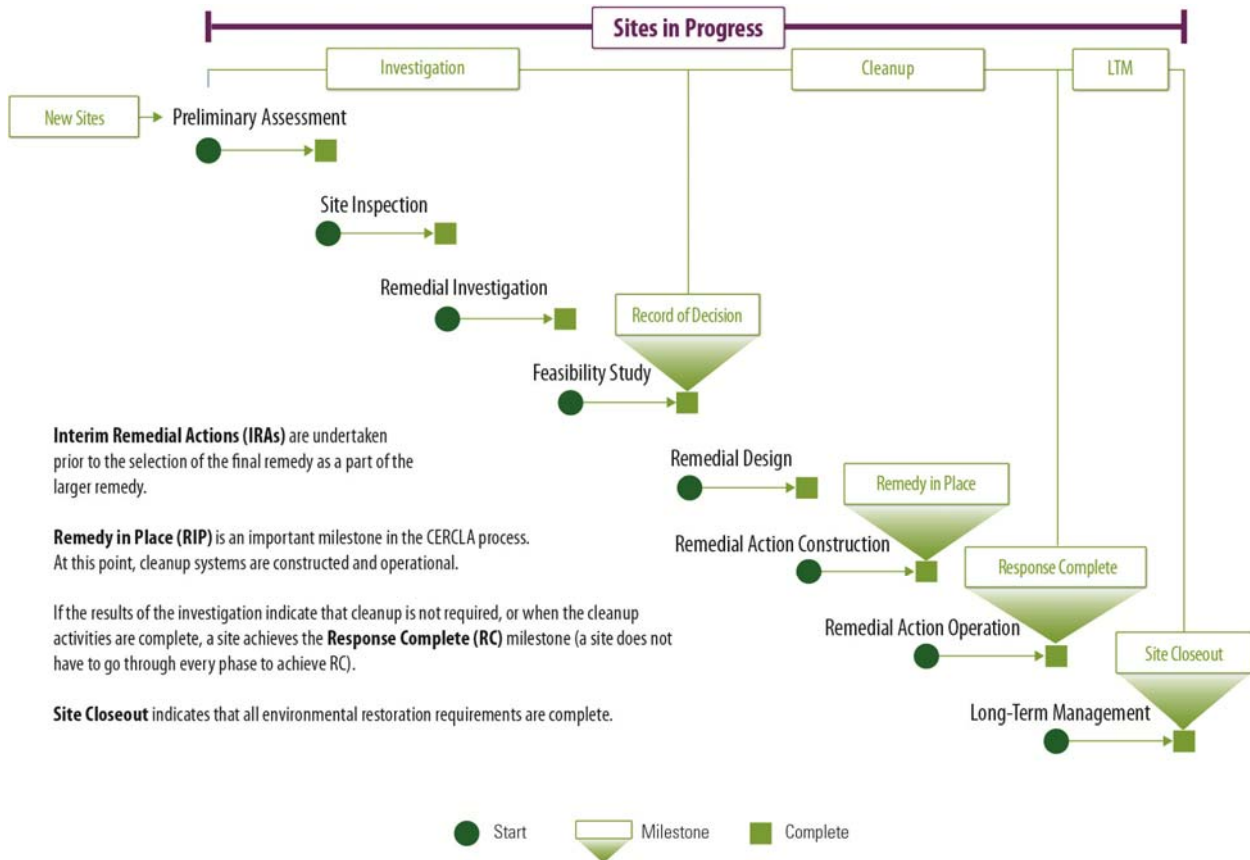

This appendix presents cleanup information (i.e., site progress, cleanup phases and milestones, and known contamination issues) for closing BRAC 2005 addressed under DoD's DERP, as required by Section 2907 of the BRAC Act and amended by Public Law No. 110-417, the "Duncan Hunter National Defense Authorization Act for Fiscal Year 2009."

Cleanup Process

DoD monitors cleanup progress at DERP sites through three key stages, as shown in Figure 1: (1) investigation completed, underway, or planned; (2) cleanup completed, underway, or planned; and (3) long-term management (LTM) completed, underway, or planned.

Defense Environmental Restoration Program (DERP) Issues

Figure 1: Cleanup Process

1. Investigation Completed, Underway, or Planned – When environmental contamination is suspected at a site, DoD begins the investigation process. DoD collects data to assess the nature and extent of contamination, if any, and the potential risks posed by the contamination during the preliminary assessment (PA), site inspection (SI), and remedial investigation (RI). If further investigation is warranted, DoD then conducts a feasibility study (FS) to examine the merits of various cleanup options and to determine the best strategy for cleanup. DoD may also implement interim remedial actions (IRAs) prior to selecting the final remedy as a part of the larger remedy. The investigation phase ends when the Record of Decision (ROD) or an equivalent decision document for the site is signed. DoD records the results of its investigation, the need for cleanup (if required), the selected strategy, and the cleanup objectives for the site in the ROD or decision document.
2. Cleanup Completed, Underway, or Planned – If cleanup is required, DoD implements the selected remedy for the site during the cleanup stage. The cleanup phases include the remedial design (RD) and remedial action construction (RA-C), and may include remedial action operation (RA-O). DoD continues cleanup or arranges for the operation of the remedy until cleanup is complete. Two key milestones during this stage are:
 - A. Remedy in Place (RIP) – RIP is a milestone which occurs when cleanup systems are constructed and operational.

Defense Environmental Restoration Program (DERP) Issues

- B. Response Complete (RC) – RC is a milestone which occurs when cleanup activities are complete (though DoD or a subsequent owner may continue to monitor the sites).

- 3. LTM Completed, Underway, or Planned – After a site achieves RC, it may still require LTM activities to ensure the site remains protective of human health and the environment. LTM includes the operation and maintenance measures required to maintain the protectiveness of the remedy. Examples of LTM include monitoring site conditions, implementing and managing land use controls, and performing 5-year reviews.

Installation Data Template

Data for each closing BRAC 2005 installation addressed under the DERP is provided in this Appendix. Figure 2 illustrates the Installation Template. The data are organized by Military Service and then alphabetically by State.

Installation Data Template Sections

A Installation Identification Information

| | | | |
|--------------------|------------------|-------------------|--------------|
| Installation Name: | Willow Grove NAS | Military Service: | Navy |
| Installation FFID: | PA317002231200 | State: | Pennsylvania |

Lists the installation name, a unique identifier referred to as the federal facility identification (FFID) number, the Military Service, and State.

This graphic depicts the introductory information for each installation. The FFID is unique to the installation and its accompanying data and enables consistent tracking of information.

B Total Sites and Acreage

| | Sites | Sites RC |
|--------|-------|----------|
| Total: | 14 | 11 |
| IRP: | 14 | 11 |
| MMRP: | 0 | 0 |

Affected Acres: 81

Provides the total number of DERP sites at the installation and the total number of sites in each program category (IRP and MMRP). The total number of sites that have achieved RC are also listed for the installation and by category (IRP and MMRP). Once a site has achieved RC, cleanup is complete except for limited activity relating to LTM.

Lists the total number of acres at the installation impacted by environmental contamination.

DoD tracks site progress by phase (e.g., investigation, cleanup, LTM) and demonstrates progress at these sites as they move from investigation through the cleanup phases to completion.

C Total Cost-to-Complete (CTC)

Cost-to-Complete (\$K): \$10,496

Indicates the total CTC for the installation anticipated in FY2013 through completion. The total excludes program management and other support costs not attributable to specific sites.

CTC estimates are the anticipated funds needed to complete cleanup (including LTM) at IRP sites and MRSs. DoD uses CTC estimates for several purposes, including planning, programming, budgeting and execution, as well as for reporting future program requirements.

Provides the beginning and end date by FY for each phase, and the FY for each milestone at the installation.

Cleanup activities often span multiple FYs, and phases within the investigation and cleanup stages may occur simultaneously or overlap across FYs. In this section of the template, the phases and milestones are identified along the y-axis. The FY beginning and end dates for the phases and the FYs for the milestones are identified on the x-axis. These FYs may be estimated or actual FYs, depending on the phase and the installation's cleanup timeline. For both the phases and milestones, the beginning and end dates are recorded in the Phase FY column in which they have or will occur. Those phases and milestones occurring before 2009 are shown with an arrow indicating DoD has already completed the phase or achieved the milestone. Any phases or milestones that DoD will complete or achieve after 2024 are also depicted with an arrow.

The template also provides the expected timelines for the three major cleanup milestones: study completion, RIP, and RC. Each milestone date is graphically depicted on the template, with one dot for the study completion milestone, two dots for the RIP milestone, and three dots for the RC milestone.

E Contaminant Type

| |
|---|
| Site Types: Fire/Crash Training Area, Firing Range, Landfill, Storage Area, Spill Site Area, Underground Tank Farm, Underground Storage Tanks |
| Affected Media: Surface Water, Groundwater, Sediment, Soil |
| Remedies: Waste Removal - Soils, Ground Water Treatment, Free Product Recovery |
| Contaminants: Radioactive Materials, BTEX, Explosives and Propellants, Halogenated SVOCs, Halogenated VOCs, Non-halogenated SVOCs, Nonhalogenated VOCs, Metals, Miscellaneous Inorganic Elements and Compounds (Misc. Organics), Pesticides, Polynuclear Aromatic Hydrocarbons (PAHs) |

Describes each type of DERP site, the affected media, the remedies put in place to address the contamination, and the types of contaminants at the installation.

Defense Environmental Restoration Program (DERP) Issues

This section identifies the various types of known cleanup issues found at the installation and addressed under the DERP, as well as contaminants identified and the media affected. If DoD has selected remedies for the various cleanup actions, they are also included in this section. In some instances, DoD may use a combination of remedies to address a contaminant or apply the same remedy to various site types.

Appendix II

Non-Defense Environmental Restoration Program (DERP) Issues

Appendix 2

Non-DEP Environmental Remediation Issues

This appendix provides details of known environmental remediation issues at installations affected by BRAC 2005 actions that are not included in the Defense Environmental Remediation Program (DEP). Currently, 9 Army and 6 Air Force installations have environmental remediation issues that are not included in DEP. For each installation that has non-DEP remediation issues a description of those issues is provided that includes the type of remediation issue; its description; acreage affected; an estimate of the cost-to-complete; a description of the plans to address each issue; and timelines for addressing each remediation issue in terms of estimated start and completion dates. (Note: For certain types of issues “acreage affected” is not relevant and therefore identified as “NA”).

The types of non-DEP environmental remediation issues included are as follows:

Operational Ranges: For operational ranges at installations subject to the BRAC 05 decisions, the Departmental may need to undertake appropriate remediation actions consistent with the proposed use of the area. An operational range is defined as a range under the jurisdiction, custody, or control of the Secretary of a military department, that is a designated land or water area set aside, managed, and used to conduct research on, develop, test, and evaluate military munitions and explosives, other ordnance, or weapon systems, or to train military personnel in their use and handling.

Asbestos: Includes both friable and nonfriable asbestos-related cleanup.

Landfill Closure: Equipment expected to be installed and facilities expected to be constructed (based on the landfill closure plan) near or after the time that the landfill stops accepting additional waste, as well as the costs of the initial cover (capping) to be applied when the landfill stops accepting additional waste. Landfill closures are operated under the provisions of Resource Conservation and Recovery Act (RCRA).

Tank Closure: RCRA corrective actions associated with contamination produced by above or below ground storage tanks and/or activities associated with a “clean close” of a tank.

Building DECON: Actions associated with the decontamination of any building or other permanent or temporary structure.

Radiological DECON: Includes actions for the decommissioning and decontamination of any location for radiological materials subject to regulation by the NRC or the Atomic Energy Act of 1954.

Permits to Site Closeouts: Includes actions associated with the closure and post-closure care of waste treatment, storage, or disposal facilities (TSDFs).

Notice of Violation: Includes actions associated with all unresolved Notices of Violation (e.g., Publicly Owned Treatment Works (POTW) and water discharges pursuant to National Pollution Discharge Elimination Systems (NPDES) permits).

Other: Includes any other form of environmental cleanup not addressed in other categories.

Appendix III

Section 2907 Law

Appendix 3

Defense Base Closure and Realignment Act of 1990, Public Law 101-510, as Amended

SEC. 2907. REPORTS

As part of the budget request for fiscal year 2007 and for each fiscal year thereafter for the Department of Defense, the Secretary shall transmit to the congressional defense committees of Congress:

- (1) a schedule of the closure actions to be carried out under this part in the fiscal year for which the request is made and an estimate of the total expenditures required and cost savings to be achieved by each such closure and of the time period in which these savings are to be achieved in each case, together with the Secretary's assessment of the environmental effects of such actions;
- (2) a description of the military installations, including those under construction and those planned for construction, to which functions are to be transferred as a result of such closures, together with the Secretary's assessment of the environmental effects of such transfers;
- (3) a description of the closure actions already carried out at each military installation since the date of the installation's approval for closure under this part and the current status of the closure of the installation, including whether —
 - (A) a redevelopment authority has been recognized by the Secretary for the installation;
 - (B) the screening of property at the installation for other Federal use has been completed; and
 - (C) a redevelopment plan has been agreed to by the redevelopment authority for the installation;
- (4) a description of redevelopment plans for military installations approved for closure under this part, the quantity of property remaining to be disposed of at each installation as part of its closure, and the quantity of property already disposed of at each installation;
- (5) a list of the Federal agencies that have requested property during the screening process for each military installation approved for closure under this part, including the date of transfer or anticipated transfer of the property to such agencies, the acreage involved in such transfers, and an explanation for any delays in such transfers;
- (6) a list of known environmental remediation issues at each military installation approved for closure under this part, including the acreage affected by these issues, an estimate of the cost to complete such environmental remediation, and the plans (and timelines) to address such environmental remediation; and
- (7) an estimate of the date for the completion of all closure actions at each military installation approved for closure under this part.

Department of Defense

**Report on 2005 Defense Base
Closure and Realignment
Implementation**

November 2013

**Office of the Deputy Under Secretary of
Defense (Installations and Environment)**

Appendix I

Defense Environmental Restoration Program (DERP) Issues

Defense Environmental Restoration Program (DERP) Issues

The Department of Defense (DoD) manages approximately 28 million acres of land, including thousands of military facilities and former defense properties throughout the United States and abroad to support its national security mission. This built and natural infrastructure provides DoD with the capability to organize, train, and equip the nation's military to perform its mission. DoD's environmental programs, such as the DERP, sustain, restore, and modernize its infrastructure to maintain readiness and protect human health and the environment.

Through the DERP, the Department complies with environmental cleanup laws, such as the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), also known as Superfund. Under the DERP, DoD addresses contamination at active installations, Base Realignment and Closure (BRAC) installations, and Formerly Used Defense Sites properties in the United States through the:

- **Installation Restoration Program (IRP):** Addresses contamination from a hazardous substance or pollutant or contaminant.
- **Military Munitions Response Program (MMRP):** Addresses sites (referred to as munitions response sites or MRSs) known or suspected to contain unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC). MRSs do not include operational ranges, operating storage and manufacturing facilities, and where munitions result from combat.

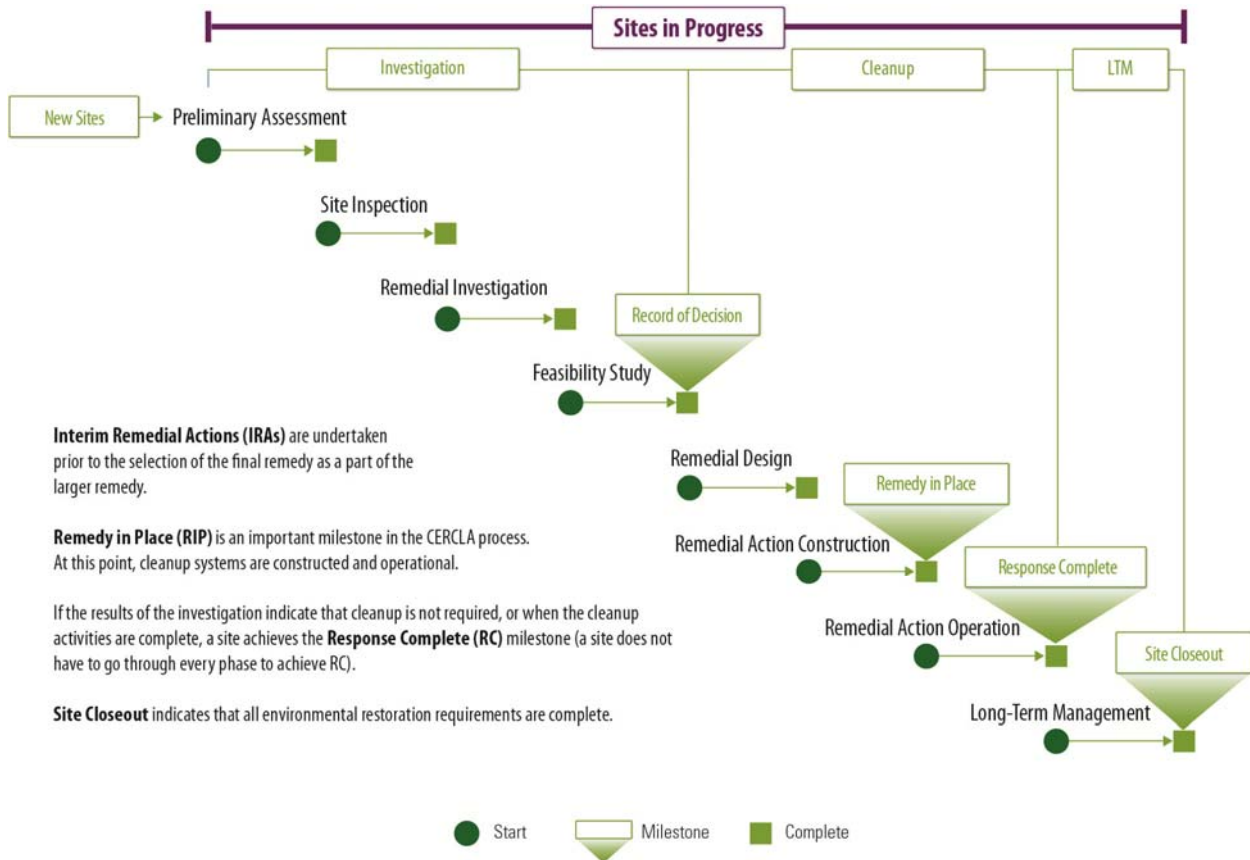

This appendix presents cleanup information (i.e., site progress, cleanup phases and milestones, and known contamination issues) for closing BRAC 2005 addressed under DoD's DERP, as required by Section 2907 of the BRAC Act and amended by Public Law No. 110-417, the "Duncan Hunter National Defense Authorization Act for Fiscal Year 2009."

Cleanup Process

DoD monitors cleanup progress at DERP sites through three key stages, as shown in Figure 1: (1) investigation completed, underway, or planned; (2) cleanup completed, underway, or planned; and (3) long-term management (LTM) completed, underway, or planned.

Defense Environmental Restoration Program (DERP) Issues

Figure 1: Cleanup Process

1. Investigation Completed, Underway, or Planned – When environmental contamination is suspected at a site, DoD begins the investigation process. DoD collects data to assess the nature and extent of contamination, if any, and the potential risks posed by the contamination during the preliminary assessment (PA), site inspection (SI), and remedial investigation (RI). If further investigation is warranted, DoD then conducts a feasibility study (FS) to examine the merits of various cleanup options and to determine the best strategy for cleanup. DoD may also implement interim remedial actions (IRAs) prior to selecting the final remedy as a part of the larger remedy. The investigation phase ends when the Record of Decision (ROD) or an equivalent decision document for the site is signed. DoD records the results of its investigation, the need for cleanup (if required), the selected strategy, and the cleanup objectives for the site in the ROD or decision document.
2. Cleanup Completed, Underway, or Planned – If cleanup is required, DoD implements the selected remedy for the site during the cleanup stage. The cleanup phases include the remedial design (RD) and remedial action construction (RA-C), and may include remedial action operation (RA-O). DoD continues cleanup or arranges for the operation of the remedy until cleanup is complete. Two key milestones during this stage are:
 - A. Remedy in Place (RIP) – RIP is a milestone which occurs when cleanup systems are constructed and operational.

Defense Environmental Restoration Program (DERP) Issues

- B. Response Complete (RC) – RC is a milestone which occurs when cleanup activities are complete (though DoD or a subsequent owner may continue to monitor the sites).

- 3. LTM Completed, Underway, or Planned – After a site achieves RC, it may still require LTM activities to ensure the site remains protective of human health and the environment. LTM includes the operation and maintenance measures required to maintain the protectiveness of the remedy. Examples of LTM include monitoring site conditions, implementing and managing land use controls, and performing 5-year reviews.

Installation Data Template

Data for each closing BRAC 2005 installation addressed under the DERP is provided in this Appendix. Figure 2 illustrates the Installation Template. The data are organized by Military Service and then alphabetically by State.

Figure 2: Installation Template

E

Site Types:
Fire/Crash Training Area, Firing Range, Landfill, Storage Area, Spill Site Area, Underground Tank Farm, Underground Storage Tanks

Affected Media:
Surface Water, Groundwater, Sediment, Soil

Remedies:
Waste Removal - Soils, Ground Water Treatment, Free Product Recovery

Contaminants:
Radioactive Materials, BTEX, Explosives and Propellants, Halogenated SVOCs, Halogenated VOCs, Non-halogenated SVOCs, Nonhalogenated VOCs, Metals, Miscellaneous Inorganic Elements and Compounds (Misc. Organics), Pesticides, Polynuclear Aromatic Hydrocarbons (PAHs)

Defense Environmental Restoration Program (DERP) Issues

Installation Data Template Sections

A Installation Identification Information

| | | | |
|--------------------|------------------|-------------------|--------------|
| Installation Name: | Willow Grove NAS | Military Service: | Navy |
| Installation FFID: | PA317002231200 | State: | Pennsylvania |

Lists the installation name, a unique identifier referred to as the federal facility identification (FFID) number, the Military Service, and State.

This graphic depicts the introductory information for each installation. The FFID is unique to the installation and its accompanying data and enables consistent tracking of information.

B Total Sites and Acreage

| | Sites | Sites RC |
|--------|-------|----------|
| Total: | 14 | 11 |
| IRP: | 14 | 11 |
| MMRP: | 0 | 0 |

Affected Acres: 81

Provides the total number of DERP sites at the installation and the total number of sites in each program category (IRP and MMRP). The total number of sites that have achieved RC are also listed for the installation and by category (IRP and MMRP). Once a site has achieved RC, cleanup is complete except for limited activity relating to LTM.

Lists the total number of acres at the installation impacted by environmental contamination.

DoD tracks site progress by phase (e.g., investigation, cleanup, LTM) and demonstrates progress at these sites as they move from investigation through the cleanup phases to completion.

C Total Cost-to-Complete (CTC)

Cost-to-Complete (\$K): \$10,496

Indicates the total CTC for the installation anticipated in FY2013 through completion. The total excludes program management and other support costs not attributable to specific sites.

CTC estimates are the anticipated funds needed to complete cleanup (including LTM) at IRP sites and MRSs. DoD uses CTC estimates for several purposes, including planning, programming, budgeting and execution, as well as for reporting future program requirements.

Defense Environmental Restoration Program (DERP) Issues

D Phase and Milestone Schedules

| Phase | Phase FY | | Phase, Cost and Milestone Schedules by FY | | | | | | | | | | | | | | | | | | | | | |
|-------------------|----------|------|---|------|------|------|------|------|------|------|------|------|------|------|------|------|------|--------|--------|--|--|--|--|--|
| | Beg | End | <= 2009 | 2010 | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | 2023 | 2024=> | | | | | | |
| PA | | | | | | | | | | | | | | | | | | | | | | | | |

| RA-C | 1989 | 2017 | <===== | | | | | | | | | | | | | | | | | | | | | |
| Remedy in Place | | 2017 | | | | | | | | •• | | | | | | | | | | | | | | |
| RA-O | 1999 | 2027 | <===== | | | | | | | | | | | | | | | | =====> | | | | | |
| Response Complete | | 2027 | | | | | | | | | | | | | | | | | •••> | | | | | |
| LTM | 2009 | 2044 | | | | | | | | | | | | | | | | | =====> | | | | | |

Provides the beginning and end date by FY for each phase, and the FY for each milestone at the installation.

Cleanup activities often span multiple FYs, and phases within the investigation and cleanup stages may occur simultaneously or overlap across FYs. In this section of the template, the phases and milestones are identified along the y-axis. The FY beginning and end dates for the phases and the FYs for the milestones are identified on the x-axis. These FYs may be estimated or actual FYs, depending on the phase and the installation’s cleanup timeline. For both the phases and milestones, the beginning and end dates are recorded in the Phase FY column in which they have or will occur. Those phases and milestones occurring before 2009 are shown with an arrow indicating DoD has already completed the phase or achieved the milestone. Any phases or milestones that DoD will complete or achieve after 2024 are also depicted with an arrow.

The template also provides the expected timelines for the three major cleanup milestones: study completion, RIP, and RC. Each milestone date is graphically depicted on the template, with one dot for the study completion milestone, two dots for the RIP milestone, and three dots for the RC milestone.

E Contaminant Type

| |
|---|
| Site Types: Fire/Crash Training Area, Firing Range, Landfill, Storage Area, Spill Site Area, Underground Tank Farm, Underground Storage Tanks |
| Affected Media: Surface Water, Groundwater, Sediment, Soil |
| Remedies: Waste Removal - Soils, Ground Water Treatment, Free Product Recovery |
| Contaminants: Radioactive Materials, BTEX, Explosives and Propellants, Halogenated SVOCs, Halogenated VOCs, Non-halogenated SVOCs, Nonhalogenated VOCs, Metals, Miscellaneous Inorganic Elements and Compounds (Misc. Organics), Pesticides, Polynuclear Aromatic Hydrocarbons (PAHs) |

Describes each type of DERP site, the affected media, the remedies put in place to address the contamination, and the types of contaminants at the installation.

Defense Environmental Restoration Program (DERP) Issues

This section identifies the various types of known cleanup issues found at the installation and addressed under the DERP, as well as contaminants identified and the media affected. If DoD has selected remedies for the various cleanup actions, they are also included in this section. In some instances, DoD may use a combination of remedies to address a contaminant or apply the same remedy to various site types.

Appendix II

Non-Defense Environmental Restoration Program (DERP) Issues

Appendix 2

Non-DEP Environmental Remediation Issues

This appendix provides details of known environmental remediation issues at installations affected by BRAC 2005 actions that are not included in the Defense Environmental Remediation Program (DEP). Currently, 9 Army and 6 Air Force installations have environmental remediation issues that are not included in DEP. For each installation that has non-DEP remediation issues a description of those issues is provided that includes the type of remediation issue; its description; acreage affected; an estimate of the cost-to-complete; a description of the plans to address each issue; and timelines for addressing each remediation issue in terms of estimated start and completion dates. (Note: For certain types of issues “acreage affected” is not relevant and therefore identified as “NA”).

The types of non-DEP environmental remediation issues included are as follows:

Operational Ranges: For operational ranges at installations subject to the BRAC 05 decisions, the Departmental may need to undertake appropriate remediation actions consistent with the proposed use of the area. An operational range is defined as a range under the jurisdiction, custody, or control of the Secretary of a military department, that is a designated land or water area set aside, managed, and used to conduct research on, develop, test, and evaluate military munitions and explosives, other ordnance, or weapon systems, or to train military personnel in their use and handling.

Asbestos: Includes both friable and nonfriable asbestos-related cleanup.

Landfill Closure: Equipment expected to be installed and facilities expected to be constructed (based on the landfill closure plan) near or after the time that the landfill stops accepting additional waste, as well as the costs of the initial cover (capping) to be applied when the landfill stops accepting additional waste. Landfill closures are operated under the provisions of Resource Conservation and Recovery Act (RCRA).

Tank Closure: RCRA corrective actions associated with contamination produced by above or below ground storage tanks and/or activities associated with a “clean close” of a tank.

Building DECON: Actions associated with the decontamination of any building or other permanent or temporary structure.

Radiological DECON: Includes actions for the decommissioning and decontamination of any location for radiological materials subject to regulation by the NRC or the Atomic Energy Act of 1954.

Permits to Site Closeouts: Includes actions associated with the closure and post-closure care of waste treatment, storage, or disposal facilities (TSDFs).

Notice of Violation: Includes actions associated with all unresolved Notices of Violation (e.g., Publicly Owned Treatment Works (POTW) and water discharges pursuant to National Pollution Discharge Elimination Systems (NPDES) permits).

Other: Includes any other form of environmental cleanup not addressed in other categories.

| Permits to Site Closeout | EIS/EBS (Final Environmental Condition Document) | 11.0 | \$234 | Prepare Supplemental EBS and update VSIs for all facilities, prepare other environmental documents that may be required. | Oct 2008 | Nov 2011 |
| Radiological DECON | Radiological operating sites require DECON | NA | \$6695 | B1193 is major cost driver since to remove the equipment requires the roof be removed and then replaced afterwards. Nine smaller facilities will have the equipment removed and the radiological work areas DECON. | Sep 2009 | Mar 2012 |
| Permits to Site Closeout | Solid and hazardous waste was generated at base | 11.0 | \$1809 | Identify, manage and dispose of solid and hazardous wastes generated by mission activities. (Project reduced by \$293K in FY08 to add to funded accelerated IRP site requirements to reduce site closure time from 2020 to 2011.) | Aug 2010 | Sep 2011 |
| Tank Closure | UST at AAFES gas station | 0.5 | \$191 | Remove UST at AAFES gas station, investigate and remediate as needed. | Oct 2009 | Mar 2014 |
| Asbestos | Asbestos, radon and PCB at various sites. | NA | \$9748 | Investigate ACM, radon, and PCB in historic area and all mission-related facilities as needed and remediate as necessary. Asbestos is expected to dominate this effort. | Oct 2007 | Sep 2011 |
| Totals | | 22.5 | \$18677 | | Oct 2007 | Sep 2011 |

Appendix III

Section 2907 Law

Appendix 3

Defense Base Closure and Realignment Act of 1990, Public Law 101-510, as Amended

SEC. 2907. REPORTS

As part of the budget request for fiscal year 2007 and for each fiscal year thereafter for the Department of Defense, the Secretary shall transmit to the congressional defense committees of Congress:

- (1) a schedule of the closure actions to be carried out under this part in the fiscal year for which the request is made and an estimate of the total expenditures required and cost savings to be achieved by each such closure and of the time period in which these savings are to be achieved in each case, together with the Secretary's assessment of the environmental effects of such actions;
- (2) a description of the military installations, including those under construction and those planned for construction, to which functions are to be transferred as a result of such closures, together with the Secretary's assessment of the environmental effects of such transfers;
- (3) a description of the closure actions already carried out at each military installation since the date of the installation's approval for closure under this part and the current status of the closure of the installation, including whether —
 - (A) a redevelopment authority has been recognized by the Secretary for the installation;
 - (B) the screening of property at the installation for other Federal use has been completed; and
 - (C) a redevelopment plan has been agreed to by the redevelopment authority for the installation;
- (4) a description of redevelopment plans for military installations approved for closure under this part, the quantity of property remaining to be disposed of at each installation as part of its closure, and the quantity of property already disposed of at each installation;
- (5) a list of the Federal agencies that have requested property during the screening process for each military installation approved for closure under this part, including the date of transfer or anticipated transfer of the property to such agencies, the acreage involved in such transfers, and an explanation for any delays in such transfers;
- (6) a list of known environmental remediation issues at each military installation approved for closure under this part, including the acreage affected by these issues, an estimate of the cost to complete such environmental remediation, and the plans (and timelines) to address such environmental remediation; and
- (7) an estimate of the date for the completion of all closure actions at each military installation approved for closure under this part.
