Women in the labor force: a databook

large share of women work full time and year-round. Over time, women have increasingly attained higher levels of education: among women ages 25 to 64 who are in the labor force, the proportion with a college degree more than tripled from 1970 to 2014, increasing from 11.2 percent to 40.0 percent. Women’s earnings as a proportion of men’s earnings also have grown over time. In 1979, women working full time earned 62 percent of what men earned; in 2014, women’s earnings were 83 percent of men’s.

This report presents historical and recent labor force and earnings data for women and men from the Current Population Survey (CPS), a national monthly survey of approximately 60,000 households conducted by the U.S. Census Bureau for the U.S. Bureau of Labor Statistics. Unless otherwise noted, data are annual averages from the CPS. (For a detailed description of the source of the data and an explanation of concepts and definitions used, see the Technical Notes at the end of this report.)

Highlights

Over the past 70 years, women’s participation in labor force activities has greatly expanded. Immediately following World War II, less than one-third of women were in the labor force. However, women soon began to participate in greater numbers, and their labor force participation rose rapidly from the 1960s through the 1980s before slowing in the 1990s. Women reached the peak of their labor force participation in 1999, with a rate of 60.0 percent. Since then, labor force participation among women has declined, to 57.0 percent in 2014, which is still relatively high by historical standards. In addition, a

Selected demographic characteristics

In 2014, 57.0 percent of women were in the labor force, edging down 0.2 percentage point from 2013. Men’s labor force participation, which always has been much higher than that for women, declined by 0.5 percentage point to 69.2 percent in 2014. (See table 2.)

CONTENTS

Highlights.....	1-4
Statistical Tables	5–101
Technical Notes.....	102-105

The overall unemployment rate for women in 2014 was 6.1 percent, a decline of 1.0 percentage point from 2013. The rate for men was 6.3 percent, down 1.3 percentage points from 2013. Women's jobless rates varied by race and ethnicity. Asian women had the lowest rate (4.6 percent), followed by White (5.2 percent), Hispanic (8.2 percent), and Black (10.5 percent) women. (See tables 2 and 3.)

Labor force participation varies by marital status and differs between women and men. Divorced women had a higher labor force participation rate than married women, 64.2 percent compared with 58.4 percent. By contrast, married men were more likely to participate in the labor force (73.5 percent) than divorced men (66.1 percent). (See table 4.)

Among mothers, the labor force participation rate was higher for those with children 6 to 17 years old than for those with younger children. In March 2014, the rate for women with children 6 to 17 years old was 75.8 percent. The rate for those with children under 6 years old was 64.3 percent, and the rate for women with children under 3 years old was lower, at 61.8 percent. (See table 5; data were collected in the 2014 Annual Social and Economic Supplement to the CPS.)

Unmarried mothers have higher labor force participation rates than married mothers. In March 2014, 76.2 percent of unmarried mothers with children under 18 years old were in the labor force, compared with 68.4 percent of married mothers with children in the same age range. (See table 6; data were collected in the 2014 Annual Social and Economic Supplement to the CPS.)

The labor force participation rate of all women with children under 18 years of age was 70.8 percent in March 2014, up slightly from 70.3 percent in 2013. (See tables 6 and 7; data were collected in the Annual Social and Economic Supplement to the CPS.)

Educational attainment

The educational attainment of women ages 25 to 64 in the labor force has risen substantially over the past 44 years. In 2014, 40 percent of this group held college degrees,

compared with 11 percent in 1970. About 6 percent of women had less than a high school diploma (that is, did not graduate from high school) in 2014, down from 34 percent in 1970. (See table 9.)

Occupation and industry

In 2014, women accounted for 52 percent of all workers employed in management, professional, and related occupations, somewhat more than their share of total employment (47 percent). The share of women in specific occupations within this large category varied. For example, 20 percent of software developers, 26 percent of chief executives, and 33 percent of lawyers were women, whereas 90 percent of registered nurses, 81 percent of elementary and middle school teachers, and 63 percent of accountants and auditors were women. (See table 11.)

Employed Asian and White women were more likely to work in high-paying management, professional, and related occupations (49 percent and 43 percent, respectively) in 2014 than were employed Black (35 percent) and Hispanic (26 percent) women. Meanwhile, Hispanic (32 percent) and Black (28 percent) women were more likely than Asian (21 percent) and White (20 percent) women to work in service occupations, which generally pay lower wages. (See table 12.)

In 2014, women accounted for more than half of all workers within several industry sectors: financial activities (53 percent), education and health services (75 percent), leisure and hospitality (51 percent), and other services (53 percent). However, women were substantially underrepresented (relative to their share of total employment) in agriculture (25 percent), mining (13 percent), construction (9 percent), manufacturing (29 percent), and transportation and utilities (23 percent). (See table 14.)

Earnings

In 2014, women who worked full time in wage and salary jobs had median usual weekly earnings of \$719, which represented 83 percent of men's median weekly earnings (\$871). Among women, earnings were higher for Asians (\$841) and Whites (\$734) than for Blacks (\$611) and

Hispanics (\$548). Women's-to-men's earnings ratios were higher for Blacks (90 percent) and Hispanics (89 percent) than for Whites (82 percent) and Asians (78 percent). (See table 16; note that the comparisons of earnings in this report are on a broad level and do not control for many factors that may be important in explaining earnings differences.)

In 2014, female full-time wage and salary workers ages 25 and older with only a high school diploma had median usual weekly earnings of \$578, which represented 82 percent of the earnings of women with an associate's degree (\$701) and 55 percent of the earnings of women with a bachelor's degree or higher (\$1,049). (See table 17.)

Median usual weekly earnings of full-time wage and salary workers were the highest in 2014 for female pharmacists (\$1,902), nurse practitioners (\$1,682), and lawyers (\$1,590). (See table 18.)

In 2014, 4.8 percent of all women (approximately 1.9 million women) paid at an hourly rate had earnings at or below the prevailing federal minimum wage (\$7.25 per hour). Among women 25 years and older who were paid at an hourly rate, 3.2 percent had earnings at or below the minimum wage, compared with 11.4 percent of women ages 16 to 24. (See table 20.)

Hours of work

In 2014, 26 percent of employed women usually worked part time—that is, less than 35 hours per week. The percentage of women working part time has not changed much over the past five decades. In comparison, 13 percent of employed men usually worked part time in 2014. This rate has gradually trended up over time. (See table 21.)

In general, employed women work fewer hours per week than men. On average, women worked 35.9 hours per week in 2014, compared with 41.0 hours for men. (See table 22.)

Of all women who worked at some point during calendar year 2013, 61 percent worked full time and year round, compared with 41 percent in 1970. The proportion of men who worked full time and year-round rose slightly, from 66 percent in 1970 to 73 percent in 2013. (See table 23; data

were collected in the 1971 and 2014 Annual Social and Economic Supplements to the CPS and reflect earnings and work experience in the previous calendar year.)

Married-couple families

Among married-couple families, 53 percent had earnings from both the wife and the husband in 2013, compared with 44 percent in 1967. Couples in which only the husband worked represented 19 percent of married-couple families in 2013, versus 36 percent in 1967. (See table 24; data were collected in the 1968 and 2014 Annual Social and Economic Supplements to the CPS and reflect earnings and work experience in the previous calendar year.)

In 2013, working wives contributed 37 percent of their families' incomes, up by 10 percentage points from 1970, when wives' earnings accounted for 27 percent of their families' total income. The proportion of wives earning more than their husbands also has grown: in 1987, 18 percent of working wives earned more than their working spouses; in 2013, the proportion was 29 percent. (See tables 25 and 26; data were collected in the 1971, 1988, and 2014 Annual Social and Economic Supplements to the CPS and reflect earnings and work experience in the previous calendar year.)

Other characteristics

Among 2014 high school graduates, young women (73 percent) were more likely than young men (64 percent) to be enrolled in college in October 2014. (See table 29; data are from the October 2014 School Enrollment Supplement to the CPS.)

Young women 16 to 24 years old who were high school dropouts between October 2013 and 2014 had a labor force participation rate of 41.9 percent, while those who had graduated from high school between January and October 2014 but were not enrolled in college had a rate of 68.0 percent. (See table 29; data are from the October 2014 School Enrollment Supplement to the CPS.)

In October 2014, 41.3 percent of women ages 16 to 24 who were enrolled in either high school or college were in the labor force. Young men in the same age group who were

enrolled in school had a lower labor force participation rate (34.6 percent). Among those not enrolled in school, women were less likely to be in the labor force than men (74.4 percent compared with 83.1 percent). (See table 30; data are from the October 2014 School Enrollment Supplement to the CPS.)

Multiple jobholders and the self-employed

In 2014, 5.3 percent of employed women held more than one job. The rate for men was lower, at 4.5 percent. (See table 31.) In 2014, 5.3 percent of working women in nonagricultural industries were self-employed, compared with 7.4 percent for their male counterparts. In 2014, 40 percent of self-employed workers were women, compared with 27 percent in 1976. (See table 32.)

Foreign born

Foreign-born women were somewhat less likely than native-born women to be in the labor force in 2014 (53.9 percent compared with 57.5 percent). Of those in the labor force, foreign-born women were slightly more likely to be unemployed than were native-born women (6.5 percent as opposed to 6.0 percent). By contrast, foreign-born men were more likely to be in the labor force (78.7 percent) than native-born men (67.4 percent) and were less likely to be unemployed (5.0 percent compared with 6.5 percent). (See table 33.)

Union membership

In 2014, 10.5 percent of female wage and salary workers were members of unions, compared with 11.7 percent of their male counterparts. For both men and women, the union membership rate in 2014 was lower than in 1983, but the rate has fallen much more for men over the 1983–2014 period. In 1983, union membership rates were 24.7 percent for men and 14.6 percent for women. (See table 34.)

Veterans

There were 10.7 million veterans of the U.S. Armed Forces in the labor force in 2014. About 1.4 million of them, or 13 percent, were women. The unemployment rate for female veterans was 6.0 percent in 2014. (See table 35.)

Women with disabilities

Of the 15.6 million women with disabilities in 2014, 2.6 million, or 16.6 percent, were in the labor force. Nearly half of women with disabilities were age 65 and older; labor force participation among this age group was 5.2 percent. The labor force participation rate was 27.8 percent for those ages 16 to 64. For women with a disability who were age 16 and older, the unemployment rate was 12.5 percent, more than twice that for women without a disability (5.8 percent). (See table 36.)

Note: Revisions to population controls and other changes can affect the comparability of labor force levels over time. In recent years, for example, updated population controls have been introduced annually with the release of January data. Information about historical comparability is available online at www.bls.gov/cps/documentation.htm#comp.

With no children under 18 years old.....	7,881	4,128	52.4	3,776	47.9	352	8.5	3,753

¹ Includes never-married, divorced, separated, and widowed women.

Note: Children are own children and are sons, daughters, stepchildren, or adopted children. Not included are nieces, nephews, and other related and unrelated children. Details for the race groups shown (White, Black or African American, and Asian) do not sum to totals because data are not presented for all races. People whose ethnicity is identified as Hispanic or Latino may be of any race.

Dash indicates no data or data that do not meet publication criteria.

¹ Includes people with a high school diploma or equivalent.

² Includes people with bachelor's, master's, professional, and doctoral degrees.

Note: Data from 1970–1991 are from the March Current Population Survey. The educational attainment categories for these years were based on the number of years of school completed. Data beginning in 1992 are annual averages, and the educational attainment categories are based on the highest diploma or degree received.

2014.....	871	897	680	1,080	616	82.5	81.8	89.9	77.9	89.0

Note: The comparability of historical labor force data has been affected at various times by methodological and conceptual changes in the Current Population Survey (CPS). For an explanation, see the historical comparability section of the household data technical documentation provided at www.bls.gov/cps/documentation.htm#comp. Beginning in 2003, estimates for the groups shown (White, Black or African American, and Asian) include people who selected that race group only; people who selected more than one race group are not included. Prior to 2003, people who reported more than one race were included in the group they identified as the main race. Data for 2000 to 2002 are for the category Asians and Pacific Islanders. Starting in 2003, Asians constituted a separate category. For more information, see the historical comparability documentation. People whose ethnicity is identified as Hispanic or Latino may be of any race.

Dashes indicate that data for Asians were not tabulated prior to 2000.

Data exclude all self-employed people, both those with incorporated and unincorporated businesses.

Women.....	13,479	1,283	9.5	543	740
Men.....	7,003	672	9.6	338	334

¹ Estimates for the race groups--White, Black or African American, and Asian--do not sum to totals because data are not presented for all races. Persons whose ethnicity is identified as Hispanic or Latino may be of any race.

² The distinction between full- and part-time workers is based on hours usually worked. These data will not sum to totals because full- or part-time status on the principal job is not identifiable for a small number of multiple jobholders. Full time is 35 hours or more per week; part time is less than 35 hours

Note: Data exclude all self-employed persons whether or not their businesses are incorporated.

Note: Revisions to population controls and other changes can affect the comparability of labor force levels over time. In recent years, for example, updated population controls have been introduced annually with the release of January data. Information about historical comparability is online at www.bls.gov/cps/documentation.htm#comp.

Note: These data reflect work experience for the entire year.

The 2013 data in this report, collected in the 2014 ASEC, are based on fewer sample responses than in recent years. Approximately three-eighths of the 2014 CPS ASEC sample was used to test redesigned questions on income and health insurance coverage; this portion of the sample was not used to generate the estimates in this table.

¹ The native born are people who were born in the United States or one of its outlying areas, such as Puerto Rico or Guam, or who were born abroad of at least one parent who was a U.S. citizen.

² The foreign born are those residing in the United States who were not U.S. citizens at birth. That is, they were born outside the United States or one of its outlying areas, such as Puerto Rico or Guam, to parents who were not U.S. citizens. This group includes legally admitted immigrants, refugees, students, temporary workers, and undocumented immigrants. The survey data, however, do not separately identify the number of people in these categories.

NOTE: Veterans are men and women who served on active duty in the U.S. Armed Forces and were not on active duty at the time of the survey. Nonveterans never served on active duty in the U.S. Armed Forces. Veterans could have served anywhere in the world during these periods of service: Gulf War era II (September 2001–present), Gulf War era I (August 1990–August 2001), Vietnam era (August 1964–April 1975), Korean War (July 1950–January 1955), World War II (December 1941–December 1946), and other service periods (all other time periods). Veterans are counted in only one period of service, their most recent wartime period. Veterans who served in both a wartime period and any other service period are classified in the wartime period.

Technical Notes

The estimates in this report were obtained from the Current Population Survey (CPS), a national monthly sample survey of approximately 60,000 eligible households that provides a wide range of information on the labor force, employment, and unemployment. The survey is conducted for the U.S. Bureau of Labor Statistics (BLS) by the U.S. Census Bureau, using a scientifically selected national sample with coverage in all 50 states and the District of Columbia.

Material in this report is in the public domain and may be reproduced without permission. This information is available upon request to individuals with sensory impairments. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.

Concepts and Definitions

The following concepts and definitions are listed in the order that they appear in the tables.

Civilian noninstitutional population includes people 16 years of age and older residing in any of the 50 states or the District of Columbia who are not confined to institutions, such as nursing homes and prisons, and who are not on active duty in the Armed Forces.

Civilian labor force is made up of all people classified as employed or unemployed.

Civilian labor force participation rate is the civilian labor force as a percentage of the civilian noninstitutional population.

Employed are people who, during the survey reference week, (a) did any work at all as paid employees; (b) worked in their own business, in a profession, or on their own farm; or (c) worked 15 or more hours as unpaid workers in a family member's business. People who were temporarily absent from their jobs or business because of illness, vacation, a labor dispute, or another reason also are counted as employed.

Employment–population ratio is the number of employed as a percentage of the population.

Unemployed are people who had no employment during the survey reference week, were available for work (except in the case of temporary illness), and had made specific efforts to find employment sometime during the 4-week period ending with the survey reference week. People who were waiting to be recalled to a job from which they had been laid off need not have been looking for work to be classified as unemployed.

Unemployment rate is the number of unemployed people as a percentage of the civilian labor force.

Not in the labor force refers to all people in the civilian noninstitutional population who are neither employed nor unemployed.

Race refers to the terms as defined by the Office of Management and Budget—White, Black or African American, and Asian. Beginning in 2003, people in these categories are those who selected that race group only. Those who identify as multiple race groups are categorized as people of Two or more races. More information on the 2003 changes to questions on race is available at www.bls.gov/cps/rvcps03.pdf. Data for other race groups—America Indians and Alaska Natives, Native Hawaiians and Other Pacific Islanders—and for people of Two or more races are included in totals but not separately identified in this report.

Hispanic or Latino ethnicity refers to people who identified themselves in the enumeration process as being Hispanic, Latino, or Spanish. People whose ethnicity is identified as Hispanic or Latino may be of any race; estimates for the race groups include Hispanics. More information on the 2003 changes in questions on race and Hispanic ethnicity is available at www.bls.gov/cps/rvcps03.pdf.

Family is a group of two or more people residing together who are related by birth, marriage, or adoption; all such people are considered as members of one family. Families are classified either as married-couple families or as families maintained by women or men without spouses present. Families include those without children as well as those with children under 18.

Children refer to one's own children and include sons, daughters, stepchildren, and adopted children. Not included are nieces, nephews, grandchildren, other related children, and all unrelated children living in the household.

Self-employed workers are those who work for profit or fees in their own business, in a profession, in a trade, or on a farm. The unincorporated self-employed are included in the self-employed category. Self-employed people whose businesses are incorporated are included with wage and salary workers, unless otherwise specified.

Wage and salary workers are those who receive wages, salaries, commissions, tips, payment in kind, or piece rates. The group includes employees in the private and the public sectors. Data on union membership and earnings of wage and salary workers exclude all self-employed workers, both those with incorporated businesses and those with unincorporated businesses.

Workers paid by the hour are people paid at an hourly rate on their main job. Historically, workers paid an hourly wage have made up approximately three-fifths of all wage and salary workers.

Usual weekly earnings represent earnings before taxes and other deductions, and include any overtime pay, commissions, and tips usually received (at the main job in the case of multiple jobholders). Earnings reported on a basis other than weekly (for example, annual, monthly, or hourly) are converted to weekly. The term "usual" is as perceived by the respondent. If the respondent asks for a definition of "usual," interviewers are instructed to define the term as "more than half the weeks worked during the past 4 or 5 months." Data refer to the sole or primary job of wage and salary workers (excluding all self-employed people, regardless of whether or not their businesses were incorporated) and are tabulated from one-quarter of the CPS monthly sample.

Median weekly earnings represent the midpoint that divides the earnings distribution into two equal parts, one part having values above the median and the other having values below the median. Median weekly earnings shown in this publication are estimated through the linear

interpolation of the \$50-centered interval in which the median lies.

Minimum wage data in this report are the numbers of workers with reported earnings at or below the federal minimum wage and pertain only to workers who are paid hourly rates. Salaried workers and other workers who are not paid by the hour are not included, even though some have earnings that, if converted to hourly rates, would be at or below the minimum wage. Consequently, the estimates presented in this report likely understate the actual number of workers with hourly earnings at or below the minimum wage. BLS does not routinely estimate the hourly earnings of workers not paid by the hour, because of data quality concerns associated with such an estimation process.

The prevailing federal minimum wage is \$7.25, effective July 24, 2009. Note that some states have established minimum-wage standards that exceed the federal level. The presence of workers with hourly earnings below the minimum wage does not necessarily indicate violations of the Fair Labor Standards Act (FLSA), because there are a number of exemptions to the minimum-wage provisions of the law. In addition, some workers might have rounded their hourly earnings in response to survey questions. As a result, some might have reported hourly earnings below the minimum wage when, in fact, they earned the minimum wage or higher.

Hours at work are the actual hours worked (at all jobs) during the survey reference week. For example, people who normally work 40 hours a week but were off during the Columbus Day holiday would be reported as working 32 hours, even if they were paid for the holiday.

Usual hours or usual full- or part-time status. Data on people "at work" exclude those who were temporarily absent from a job and therefore were classified into the zero-hours-worked category, "with a job but not at work." These are people who were absent from their jobs for the entire week for reasons such as bad weather, vacation, illness, or involvement in a labor dispute. To differentiate a person's normal schedule from his or her activity during the survey reference week, people also are classified according to their usual full- or part-time status. In this context, full-

time workers are those who usually work 35 or more hours (at all jobs combined) per week. This group includes some individuals who worked less than 35 hours in the reference week for either economic or noneconomic reasons and those who were temporarily absent from work. Similarly, part-time workers are those who usually work less than 35 hours per week (at all jobs), regardless of the number of hours worked in the reference week. These workers may include some individuals who actually worked more than 34 hours in the reference week as well as those who were temporarily absent from work.

Occupation and industry information for the employed applies to the job held during the reference week.

People with two or more jobs are classified as being in the occupation and industry in which they worked the greatest number of hours. The CPS uses the Census occupational classification, based on the 2010 Standard Occupation Classification (SOC), and the Census industry classification, derived from the 2012 North American Industry Classification System (NAICS). Additional information about these classifications is available online at www.bls.gov/cps/cpsoccind.htm.

Work experience data reflect work activity during the calendar year and are obtained from the Annual Social and Economic Supplement (ASEC) to the CPS. Estimates of people who worked are based on “yes” responses to the following questions in the ASEC: “Did you work at a job or business at any time during [the survey reference year]?” or “Did you do any temporary, part-time, or seasonal work even for a few days during [the survey reference year]?” Because the reference period is a full year, the number of people with some employment exceeds the average levels for any given month, which are based on a 1-week reference period, and the corresponding annual averages of monthly estimates.

Displaced workers are wage and salary workers 20 years of age and older who lost or left jobs because their plant or company closed or moved, there was insufficient work for them to do, or their position or shift was abolished. Data are presented for long-tenured displaced workers—those who had worked for their employer for 3 or more years at

the time of displacement. All self-employed workers are excluded, both those with incorporated businesses and those with unincorporated businesses. Data were collected through a biennial supplement to the January CPS.

Employee tenure is a measure of how long wage and salary workers had been with their current employer at the time of the survey. Tenure is presented in median years; the median is the point at which half of all workers had more tenure and half had less. Data refer to the sole or principal job of full- and part-time workers. All self-employed workers are excluded, both those with incorporated businesses and those with unincorporated businesses. The data were collected through a biennial supplement to the January CPS.

Foreign born refers to people residing in the United States who were not U.S. citizens at birth. That is, they were born outside the United States or one of its outlying areas, such as Puerto Rico or Guam, to parents, neither of whom was a U.S. citizen. The foreign-born population includes legally admitted immigrants, refugees, temporary residents such as students and temporary workers, and undocumented immigrants. The survey data, however, do not separately identify the number of people in these categories. The native born are people born in the United States or one of its outlying areas or who were born abroad of at least one parent who was a U.S. citizen.

Union membership refers to members of a labor union or of an employee association similar to a union. The data are tabulated from one-quarter of the CPS monthly sample and are limited to wage and salary workers. All self-employed workers are excluded, both those with incorporated businesses and those with unincorporated businesses.

Veterans are men and women 18 years or older who previously served on active duty in the U.S. Armed Forces and who were civilians at the time they were surveyed. People who are on active duty at the time of the survey are outside the scope of the survey and thus not in the estimates shown here. Nonveterans are men and women who never served on active duty in the U.S. Armed Forces. Veteran status is obtained from responses to the question, “Did you ever serve on active duty in the U.S. Armed Forces?”

Disability data from the CPS are based on a set of six questions used to identify people with disabilities. The questions are about physical, mental, or emotional conditions that cause serious difficulty with daily activities. People are classified as having a disability if there is a response of “yes” to any of these questions. For each of the questions, interviewers ask the respondent whether anyone in the household has the condition described, and if the respondent replies “yes,” he or she is then asked to identify everyone in the household who has the condition. More information, including the wording of the six questions used to identify people with a disability, is available at www.bls.gov/cps/demographics.htm#disability.

Reliability of the estimates

Statistics based on the CPS are subject to both sampling and nonsampling error. When a sample, rather than an entire population, is surveyed, there is a chance that the sample estimates may differ from the true population

values they represent. The component of this difference that occurs because samples differ by chance is known as sampling error, and its variability is measured by the standard error of the estimate. There is about a 90-percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.6 standard errors from the true population value because of sampling error. BLS analyses are generally conducted at the 90-percent level of confidence.

All other types of error are referred to as nonsampling error. Nonsampling error can occur for many reasons, including the failure to sample a segment of the population, inability to obtain information for all respondents in the sample, inability or unwillingness of respondents to provide correct information, and errors made in the collection or processing of data. Information on the reliability of data from the CPS and on estimating standard errors is available at:

www.bls.gov/cps/documentation.htm#reliability.
