

TABLE 1. A SUMMARY (including footnotes) OF ATLANTIC MARINE MAMMAL STOCK ASSESSMENT REPORTS FOR STOCKS OF MARINE MAMMALS UNDER NMFS AUTHORITY THAT OCCUPY WATERS UNDER USA JURISDICTION.

Total Annual S.I. (serious injury) and Mortality and Annual Fisheries S.I. and Mortality are mean annual figures for the period 2006-2010. The “SAR revised” column indicates 2012 stock assessment reports that have been revised relative to the 2011 reports (Y=yes, N=no). If abundance, mortality, PBR or status have been revised, they are indicated with the letters “a”, “m”, “p” and “status” respectively. For those species not updated in this edition, the year of last revision is indicated. Unk = unknown and undet=undetermined (PBR for species with outdated abundance estimates is considered “undetermined”).

- a. The R given for right whales is the default Rmax of 0.04. The total estimated human-caused mortality and serious injury to right whales is estimated at 3.0 per year (USA waters, 1.4; Canadian waters, 0.6). This is derived from two components: 1) non-observed fishery entanglement records at 1.8 per year (USA waters, 1.6; Canadian waters, 0.2), and 2) ship strike records at 1.2 per year (USA waters, 0.8; Canadian waters, 0.4).
- b. The total estimated human-caused mortality and serious injury to the Gulf of Maine humpback whale stock is estimated as 7.8 per year (USA waters, 7.6; Canadian waters, 0.2). This average is derived from two components: 1) incidental fishery interaction records 5.8 (USA waters, 5.6; Canadian waters, 0.2); 2) records of vessel collisions, 2.0 (USA waters, 2.0; Canadian waters, 0)
- c. While abundance estimates have been attributed to each stock, the bycatch estimate includes both long-finned and short-finned pilot whales.
- d. Estimates may include sightings of the coastal form.
- e. The total estimated human caused annual mortality and serious injury to harp seals is 379,673. Estimated annual human caused mortality in US waters) 282 harp seals CV=0.19) from the observed US fisheries. The remaining mortality is derived from five components: 1) 2006-2010 average catches of Northwest Atlantic harp seals by Canada, 188,646; 2) 2006-2010 average Greenland Catch, 82,063; 3) 1,000 average catches in the Canadian Arctic; 4) 12,330 average bycatches in the Newfoundland lumpfish fishery; and 5) 95,347 average struck and lost animals.
- f. This is derived from three components: 1) 5,173 from 2001-2005 (2001 = 3,960; 2002 = 7,341; 2003 = 5,446, 2004=5,270; and 2005=3,846) average catches of Northwest Atlantic population of hooded seals by Canada and Greenland; 2) 25 hooded seals (CV=0.82) from the observed U.S. fisheries; and 3) one hooded seal from average 2001-2005 stranding mortalities resulting from non-fishery human interactions.
- g. This estimate includes Gervais' beaked whales and Blainville's beaked whales.
- h. This estimate includes all *Globicephala sp.*, though it is presumed that only short-finned pilot whales are present in the Gulf of Mexico.

Appendix 3. 2012 Pacific Marine Mammal Stock Assessment Reports. S=strategic stock; N=non-strategic stock.
Shaded lines indicate reports revised in 2012. unk=unknown, undet=undetermined, n/a=not applicable.

Appendix 2. Stock summary table (last revised 05/04/2012). Stock assessment reports for those stocks in boldface were updated in the 2012 draft stock assessments. N/A indicates data are unknown. UNDET (undetermined) PBR indicates data are available to calculate a PBR level but a determination has been made that calculating a PBR level using those data is inappropriate (see stock assessment for details).

C.F. = correction factor; CV C.F. = CV of correction factor; Comb. CV = combined CV; Status: S = Strategic, NS = Not Strategic.

¹ No or minimal reported take by fishery observers; however, observer coverage was minimal or nonexistent.

² Recent changes in the abundance estimates do not indicate a major population increase. Instead, these increases are due to new analytical methods that take environmental covariates into account and thus provide an improved estimate of harbor seal abundance.

³ N(est) based on counts of individual animals identified from photo-identification catalogs. Surveys for abundance estimates of these stocks are conducted infrequently.

⁴ Includes entanglements from recreational or subsistence fisheries.

⁵ Mortality and serious injury estimates calculated for humpbacks in the northern area of the Central North Pacific humpback whale stock range (Gulf of Alaska, Aleutian Islands, and Bering Sea).
