

USDA Rural Development
2012 Progress Report

Historic Investments Help Strengthen Rural Economy

The USDA Rural Development Vision:

A rural America that
is a healthy, safe, and
prosperous place in
which to live and work

Since 2009, President Obama's plan for rural America has brought about historic investment in rural communities that has made them stronger and more vibrant. Under the President's leadership, investments in broadband, businesses, housing, safe water and community facilities have benefited rural America – strengthening not just the rural communities themselves, but the overall economy.

In June 2011, President Obama announced the establishment of the White House Rural Council to enhance coordination between the Department of Agriculture and other government departments to facilitate program delivery. This year, the Rural Council played a major role in helping communities stay resilient through a historic drought – and I know that we can carry out even more work together in 2013.

The President's decision to expand investments in rural development and establish the Rural Council is paying off. The rural economy is growing, thanks to the success of a comprehensive rural strategy and vision for the future to spur innovation and expand opportunities for rural enterprises. Agriculture is now one of the fastest-growing parts of our economy – it's related in some way to 1 out of every 12 American jobs.

Smart investments in clean energy, through the Administration's "all-of-the-above" energy strategy, are another key component of this comprehensive rural effort. In 2012, USDA Rural Development invested more than \$76 million in about 1,600 renewable energy projects across rural America. Energy savings from these renewable energy projects, everything from anaerobic digesters and wind turbines to energy efficient doors on your grocer's freezer case, are freeing up revenue that can be reinvested in rural America. Energy savings are also passed along to the end-consumers, lowering their energy costs and boosting their available household incomes. Further, we helped make possible additional advanced biorefineries and, since 2009, Rural Development has helped make possible nine such projects across America.

USDA's investments in rural communities support the rural way of life that stands as the backbone of our core American values. This report tells many of the stories of how USDA assistance has helped to improve the economic stability of rural towns, businesses, residents, farmers and ranchers and improve the quality of life in rural America. In 2012, Rural Development helped carry out more than 1,500 new Community Facility projects – helping libraries, medical centers, schools and more. This report explains how Federal employees across America are partnering with local citizens to help rural communities at large.

Finally, Rural Development continued in its record efforts to help small, rural businesses grow and thrive. We provided nearly 10,000 additional loans and grants for rural businesses this year – and since 2009 USDA has provided nearly 60,000 such efforts to help rural business grow and thrive.

We must continue to make critical investments in broadband, bio-products, and strengthening capital markets for rural America, and targeting those investments to the parts of rural America that face the greatest economic need. If the past 4 years have taught us anything, we have learned that the key to a strong economy and the long-term fiscal health of America is smart, efficient, and effective investment in rural America.

I am proud of the role that our rural communities played this year to keep the American economy moving forward. President Obama and I are committed to ensuring that they remain great places for families to live for generations to come. I am pleased that we can share these successes with you.

Sincerely,

Thomas J. Vilsack
Secretary of Agriculture

USDA Rural Development Brings Greater Opportunity to Rural America

The USDA Rural Development Mission

To increase economic
opportunity and
improve the quality
of life for all rural
Americans

D

uring the past 75 years, augmented with the infusion of more than \$20 billion in investments through the American Recovery and Reinvestment Act of 2009 (the Recovery Act), the overall USDA Rural Development outstanding loan portfolio has grown to over \$176 billion. These investments in rural America have provided affordable housing, improved utility infrastructure, and helped businesses and cooperatives create jobs, build rural economies, and increase the quality of life in rural America.

We have much to celebrate in Fiscal Year 2012. Overall, USDA Rural Development leveraged more than \$30 billion in investments toward projects in rural communities. Many are the result of grassroots collaboration and creative partnerships between USDA employees and local organizations, governments, Tribes or individuals. It's amazing what these partnerships can achieve. Even relatively small amounts of financing can have lasting impacts for those in need.

Through Rural Development's infrastructure development programs, we made investments in rural utility systems that helped to improve and expand the rural electrical grid, provide clean drinking water to rural communities, and deliver faster Internet service to rural families and to businesses, allowing them to compete in the fast-paced global economy. In 2012, we provided nearly 64,000 rural residents with new or better access to broadband Internet service, provided millions of customers with new or improved electric service, and provided millions more with new or improved water or wastewater service. Rural Development provided approximately \$4.7 billion in electric loans, \$173 million in telecommunications loans and grants, and \$1.4 billion in water and waste disposal loans and grants.

Through Rural Development's business and cooperative loan, grant, and technical assistance programs, the agency helped almost 10,000 rural small business owners or farmers improve their enterprises in 2012. Beyond the direct assistance to these business owners and producers, financial support from USDA is also creating lasting economic development opportunities in the rural communities where these projects are located. Business and cooperative program funding created or saved an estimated 53,000 rural jobs in 2012.

Rural Development is the lead agency ensuring that rural families have access to safe, well-built, affordable homes. A house is more than just a roof over peoples' heads. A house also helps families plant long-term roots in their community. In 2012, Rural Development helped 7,940 families with limited incomes obtain safe, affordable homes. We helped more than 145,000 moderate-income families purchase single-family homes under the single-family guaranteed loan program. We also helped more than 7,000 rural individuals or families repair their existing homes under the USDA home repair loan and grant program.

In 2012, USDA Rural Development helped more than 270,000 low- and very low-income families, who were able to live in safe, USDA-financed multi-family housing thanks to rental assistance to bring their rents to an affordable level. We also helped approximately 1,700 families move in to new apartment units.

In 2012, Rural Development, through its Community Facilities loan and grant program, provided assistance to construct or improve 48 rural libraries, and provided support for almost 250 health care projects – part of more than 1,500 Community Facility projects nationwide this year.

In addition to our efforts to support education and health care, another key aspect of the Community Facilities program is the ability to support emergency responders. For example, this report discusses how USDA provided funding to Madison, Florida, for an aerial ladder truck for fire protection. Over the years, prior to receiving assistance from USDA Rural Development, a number of Madison's local businesses and other buildings were destroyed by fires because the city lacked equipment that could fight blazes in multi-story structures.

Finally, I want to publicly thank the men and women who work in USDA Rural Development. Our agencies have labored under a tough fiscal reality that has resulted in a substantial reduction of our workforce. Today, our portfolio is strong, thanks to their efforts.

Prosperity in rural America depends on ensuring that residents have a wide range of economic opportunities and can participate fully in the global economy. Thanks to the countless rural Americans who use our more than 40 loan, grant, and technical assistance programs, we are helping to create sustainable jobs, and we are laying a strong foundation for rural America in the future.

Sincerely,

A handwritten signature in black ink that reads "Dallas Tonsager". The signature is fluid and cursive, with a long horizontal flourish extending to the right.

Dallas Tonsager
Under Secretary for Rural Development

Rural Business-Cooperative Service
An Engine for Rural
Economic Growth,
Innovation, and Jobs

SDA Rural Development's Rural Business-Cooperative Service improves the quality of life in rural America by encouraging the establishment and growth of rural businesses and cooperatives, which ultimately increase the availability, stability, and quality of rural jobs. More opportunities for agricultural producers and other residents are created by leveraging partnerships with States, and local and private funding organizations, to expand the amount of resources provided. The agency also operates programs that encourage American energy independence by developing clean, home-grown sources of energy, including wind, solar, advanced biofuels from renewable feedstocks, and anaerobic digesters. It also promotes energy efficiency efforts.

Loan Guarantee Helps Food Co-op Expand

The Business and Industry (B&I) Guaranteed Loan program provides financial backing for rural businesses. Commercial loan guarantees for new or expanding rural businesses are available for up to 80 percent of the loans made by participating private-sector lenders.

Vermont's Brattleboro Food Co-op started in 1975 as a small buying club that has since grown into a natural foods market serving 5,000 members. Co-op leaders realized that they needed to expand their facility and make it more energy-efficient for the long-term viability of their business. They raised more than \$1 million from members and leveraged those funds with a \$4.2 million B&I guarantee from USDA. Peoples United Bank was the lender for the project.

The co-op's new, energy-efficient 33,840-square-foot building — almost twice the size of the original store — is an anchor business in downtown Brattleboro. The larger store will add market capacity for about 200 local farmers and food producers that supply the co-op with products. The cutting-edge, environmentally friendly building will even recycle waste heat generated from the store's refrigeration equipment and reuse it to heat water for the facility. The co-op expansion supports more than 100 high-quality local jobs.

Minnesota Grows Jobs, Local Economy Through Relending Program

Through the Intermediary Relending program (IRP), USDA lends funds to intermediaries, which use them to capitalize a revolving loan fund for business and community development projects. The program helps to reduce rural poverty, increase economic activity, and provide employment opportunity in disadvantaged, remote communities. USDA encourages intermediaries to work in partnership with other public and private organizations that can provide complementary resources.

The Prairieland Economic Development Corporation (PEDC) began partnering with USDA Rural Development in 1997 to grow the economy and create jobs in Minnesota. Prairieland's service area includes southwestern Minnesota, parts of northwest Iowa, and eastern South Dakota. Through four IRP awards from the United States Department of Agriculture, PEDC has made more than 60 loans to area organizations.

Smith's Trucking, a family-owned, long-haul carrier, has received three IRP loans from PEDC. The family used the first loan, along with financing from First State Bank Southwest, to relocate the company from Round Lake, MN, where it was started, to Worthington, MN. Subsequent IRPs helped Smith's Trucking to purchase the Worthington facility and expand and equip it.

Today, the company's trucks travel more than 1 million miles each month, delivering commodities all across the Nation. Initially, the company had about 40 employees. Smith's Trucking, which also operates a truck wash and repair facility, now employs 125 people.

Business Grant Pays for Improvements at Georgia Air Terminal

The Rural Business Enterprise Grant (RBEG) program provides grants for a broad array of rural projects to aid in development of small and emerging businesses, business incubators, employment, and support adult education programs.

A new terminal at the Kaolin Field Airport in

Sandersville, GA, was need to support the growth of surrounding counties. Increased air terminal activity would benefit local businesses and create more jobs. The project was funded through partnerships. In addition to the assistance from USDA, the Kaolin Field Airport received more than \$2.5 million from other Federal, State, and local sources.

Rural Development provided a \$67,000 RBEG to furnish a conference facility for Kaolin's new terminal. It will accommodate 16 people and includes a kitchenette, a pilot's lounge, restrooms, offices, a reception area, and a mechanical room.

New Community and Senior Center in Chester, MT

Through the Rural Economic Development Loan and Grant program, rural utilities, such as electric and telephone cooperatives or public electric districts, provide low-cost financing for public and private community development projects.

Triangle Communications, based in Havre, MT, provided the neighboring town of Chester

with \$266,000 in USDA Rural Economic Development loan funding to build a new community and senior center. The project received additional State and local financing.

The center marks the end of a nearly decade-long effort by the senior center's management to expand the former facility and provide more services to the aging population of Liberty County. Employees at the new facility are already serving lunch to more than 50 visitors a day and delivering about 30 more meals daily through the Meals-On-Wheels program. A key improvement was installation of a full-service kitchen with ample storage areas. The new center will create or save 10 jobs.

Grocery Store Cuts Energy Costs With USDA Grant

The Rural Energy for America Program (REAP) provides loan guarantees and grants to agricultural producers and rural small businesses to install renewable energy systems, make energy efficiency improvements, conduct energy audits, provide renewable energy development assistance, and conduct

feasibility studies.

Red's IGA food store in Spring Grove, MN, received a REAP grant of \$8,000 to purchase and install energy-efficient refrigeration doors. The new doors are saving about 158,000 kilowatt hours of electricity per year, saving the store about \$500 each month.

"It's the smartest thing we could have done," said store owner Pat Longmire. "We were just wasting energy before. If every store across the country did what we did, the impact would be dramatic. It's just one little thing, but it's making everything more efficient."

USDA Helps Oregon Forestland Owners Increase Revenue

USDA's Value-Added Producer Grant (VAPG) program encourages independent agricultural producers to refine or enhance raw products, which increases their value and the financial returns to producers.

The Oregon Woodland Cooperative (OWC), a group of about 60 forestland owners across the State,

needed help to generate more income from their land. USDA Rural Development provided OWC with a \$385,000 VAPG to prepare a business plan, hire a consultant, and conduct professional surveys of the forests. The surveys identified a number of marketable, non-lumber products that could create more revenue.

One of the value-added products identified is a line of oils that can be extracted from the leaves and needles of cedar, pine, and fir trees for use in hand lotions and air fresheners. Just 5 milliliters of these oils can retail for up to \$16, providing extra revenue to the landowners, product developers, and the businesses that distill, package, and market the oils. The extractions do not harm the health or growth of the trees.

Thanks to the grant, OWC members will now realize additional income from their forestland while creating new businesses and more local jobs.

Small, Socially Disadvantaged Producers Benefit From Technical Assistance

The Small Socially Disadvantaged Producer Grant program awards grants to eligible cooperatives and co-op associations that provide technical assistance to small, socially disadvantaged rural agricultural producers.

USDA awarded a grant to the Piedmont Farmers

Marketing Cooperative in Greenwood, SC, to provide seminars for members on animal husbandry, vaccination requirements, and breeding techniques. The 31-member cooperative is also using the grant to develop a marketing study and visit a livestock operation that converts manure into renewable energy.

Cooperative Development Strengthens Economic Opportunities

USDA Rural Development's Rural Cooperative Development Grant (RCDG) program provides funds to cooperatives and development centers to help rural individuals and businesses start, expand, or improve business operations. The grants also help rural communities improve their economic conditions, create and retain jobs, and develop new co-ops.

The California Center for Cooperative Development is a small, nonprofit organization that traces its origins to the cooperative extension service at the University of California in Davis. In 2012, USDA provided the center with a \$225,000 RCDG to promote community-supported agriculture, strengthen marketing of small farm production, and develop systems to link growers with consumers. The center will also use the funds to help local farmers form co-ops to increase their income and enhance their position in the marketplace.

A young child is sitting on a red slide at a playground. The child is wearing a red t-shirt with a graphic, dark shorts, and blue flip-flops. The slide is set on a bed of wood chips. In the background, there are other playground structures, including a blue one with a red train cutout, and a building with a green fence. The text is overlaid on a blue and white background in the upper left quadrant.

Rural Housing Service
**Affordable Housing
and Essential
Community Facilities
for Rural America**

U

SDA Rural Development's Rural Housing Service (RHS) helps rural communities and individuals through loans, grants, and technical assistance for housing and critically needed community facilities. USDA funds development of affordable single-family homes, apartments for low-income people or the elderly, housing for farm laborers, childcare centers, fire and police stations, hospitals, libraries, nursing homes, schools, and more. Priority for community facilities funding is given to health care, education, and public safety projects.

USDA works in partnership with nonprofits, Indian tribes, State and Federal government agencies, and local communities to deliver assistance. In a

typical year, USDA helps 40,000 to 50,000 rural Americans buy homes and assists 450,000 people with low-income rent apartments or other housing.

Since 2009, USDA has invested in thousands of critical community facilities projects that have benefitted about 30 million rural residents. In 2012 alone, RHS made about 1,400 community facilities loans and grants worth more than \$1.5 billion.

Lower Costs, More Opportunities at Tennessee's First College

Founded in 1794, the historic Tusculum College in Greeneville is the oldest college in Tennessee and the 28th-oldest college in America. The college serves about 2,100 undergraduate and graduate students.

In September 2012, RHS Administrator Tammye Treviño visited Tusculum College to announce the award of almost \$40 million in Community Facilities loan financing for renovations to the institution's historic Tredway Hall and for construction of an all-new science and math building.

"Tusculum College is a key economic driver for Greene County and Northeast Tennessee," Treviño said. "The faculty and staff have a long, distinguished history of ensuring that businesses have a homegrown source of well-educated workers to keep the region competitive and our rural communities healthy."

College president Nancy Moody said that the loan from USDA is expected to significantly lower debt service payments, making the construction and renovation projects possible while also improving the college's overall finances and supporting the local economy.

The Tredway Hall renovations will provide critically needed improvements for the building that was originally constructed in 1930 and last renovated in the early 1980s. The new science and math center will provide faculty and students with an advanced facility for research and space necessary to add new programs in nursing and criminal justice, fields with growing job opportunities for educated workers in the region.

USDA Rural Development Helps Low-Income Seniors Replace Their Unsafe Housing With a New Home

For rural communities to remain viable, affordable housing opportunities are needed for all. As a population ages, so do the homes in which the aging live. USDA Rural Development has housing programs that provide low-income families with homeownership loans and/or assistance to make essential repairs to remove health and safety hazards from existing homes.

Rita T. Woods, 70, and her sister Margaret Thomas, 63, were sharing a house in St. Landry Parish, LA, that was beyond repair. It had foundation problems, faulty electrical wiring, and mold on the ceiling from a leaky roof.

The sisters had tried to obtain better housing, but their income was low and they were not able to get conventional financing to make repairs or

build a new home. They filed an application for a single-family direct loan from Rural Development. Through this program, USDA provides homeowners with subsidy assistance in addition to the mortgage loan to make the monthly payments more affordable. Applicants must be unable to obtain credit elsewhere but still have a reasonable credit history.

Rural Development staff in the Lafayette Area Office worked closely with the two sisters throughout the application process to make sure that everything was in place for loan approval. They qualified for a direct home loan of \$95,000 for new construction.

Because the existing home was damaged beyond repair, it was demolished and removed from the lot. Construction of their new home began in February 2012 and the sisters subsequently moved into their safe, new home.

"This is a dream come true. We never thought it would be possible to get a loan at our age and with our income," Thomas said.

Rural Development Single-Family Housing Specialist Jeanne Quirk of the Lafayette Area Office helped process the loan application. "This new home will increase property values in the neighborhood, and it has allowed the sisters to remain homeowners," she said.

Solar-Powered Housing Complex in Jerseyville, IL, Will Reduce Costs for Elderly Residents

In September 2012, a ribbon-cutting was held to celebrate the opening of Miller's Northeast Apartments, the newest multi-family housing complex in Jerseyville, IL. This eight-unit property is senior housing for elderly residents 62 or older, or people with disabilities, regardless of their age.

The complex is designed to be energy-efficient and is powered through an array of solar panels on the roof. The savings from the solar panels are expected to reduce the facility's operating costs and to help lower occupants' rents and rental assistance subsidy costs. Rental assistance is funding provided to the project to help very low-income tenants afford the monthly rent.

Two of the eight units are fully handicapped-accessible. Amenities include a secure entryway, an on-site laundry, a spacious community room, natural solar-powered lighting, energy-efficient doors and windows, "green" renewable, resilient flooring, a maintenance-free metal roof, and Energy Star®-rated appliances. The solar panels generate electricity for the

overall property and for each resident's unit, cutting utilities to a minimum.

USDA Rural Development provided financing for Miller's Northeast Apartments through a 30-year low interest loan and rental assistance for the project.

Community Facilities Grant Brings Basic Amenities to Small Arizona Town

The small town of Guadalupe in Arizona's Salt River Valley has a population of about 5,600 people whose ethnic heritage is either Yaqui Indian or Hispanic. The founders were Yaqui people who fled north and settled in the valley in the early 1900s after the Mexican Revolution. They named their community for the Virgin of Guadalupe, the patron saint of Mexico.

Guadalupe retains its old-world rural character and charm with quaint adobe homes, a large central

plaza with a white-washed church, and chairs under shade trees in front yards. But almost half of the residents have incomes below the poverty level — the median income is less than \$30,000. Some of the residential areas lacked basic infrastructure, such as curbs, gutters, and sidewalks, because the town lacked the resources to provide them.

In 2012, USDA provided a Community Facilities grant of \$47,870 that was combined with county Community Development Block Grant funds to complete the project. In June, thanks to USDA Rural Development and the partnership with local government, construction crews began the work in one of the oldest neighborhoods in Guadalupe. Drain water will flow through gutters along curbs instead of seeping into the ground. Residents will have sidewalks where families can safely bike or walk and children can play.

Rural Utilities Service
Building a Strong
Foundation for
the Future

F

unding from USDA Rural Development's Rural Utilities Service (RUS) benefits millions of rural households and businesses nationwide through increased broadband access, enhanced reliability of electric service, and improved water quality and wastewater systems.

In 2012, USDA implemented new provisions to help underserved Trust Areas — land held in trust by the United States for Native Americans — receive funding to build electric, telecommunications, and water and waste facilities, and to access loans

and grants for the latest educational and health care services.

Agriculture Secretary Vilsack challenged the agency to invest \$250 million in smart grid technologies to improve data-monitoring to increase electric system efficiency and reliability. RUS not only met that goal, but funded nearly \$400 million in smart grid projects in the year following the announcement. With the help of a \$3.5 million investment from USDA, the Dairyland Power Cooperative in LaCrosse, WI, is implementing smart grid technologies to better respond to system outages and improve reliability for customers.

USDA also funded more than \$278 million in renewable energy systems through RUS, including one solar and three biomass projects, and provided a \$480 million loan for a clean coal technology project in Mississippi. Additionally, RUS investment included \$1.2 billion for transmission and \$175 million for environmental improvements. USDA electric funding will help deliver reliable, affordable electricity to more than 8.2 million customers in rural areas.

Telecommunications funding, including broadband, community connect, and distance learning and telemedicine (DLT) projects, will improve service for nearly 65,000 rural households, businesses, and anchor institutions nationwide. This \$173 million investment will expand rural access to educational, health care, business, and social services. A portion of the funding will expand broadband service on American Indian and Alaska Native tribal lands.

In addition to loans, RUS provided nearly \$5.5 million in Community Connect grants in 2012 to communities lacking broadband service, and \$14 million in DLT grants to provide greater access to

educational and health care services in rural areas.

Since 2009, the Obama Administration and USDA have invested in 5,500 water and wastewater infrastructure projects that have helped safeguard the health of 20 million rural residents and have created or saved 150,000 jobs. Through the Recovery Act, USDA invested roughly \$3 billion in rural water and wastewater systems. Of these 828 active Recovery Act water projects, 96 percent are in the bidding stage or beyond, with 293 completed. This \$3-billion investment creates immediate job opportunities and modern, reliable water infrastructure for rural communities.

In 2012, USDA provided \$1.4 billion for new and improved water and waste infrastructure and technical assistance that will benefit 2.5 million rural residents.

High-Speed Broadband Comes to Rural North Carolina

North Carolina residents in southeastern Columbus County lacked access to high-speed Internet service. Connection speeds were so slow that people in this area couldn't even check their e-mail. This case illustrates why broadband expansion continues to be a

primary focus at USDA. There are many rural areas that lack Internet service capable of meeting even the most minimal needs and expectations of today's customers.

USDA awarded the Atlantic Telephone Membership Corporation (ATMC) a \$4.8-million Recovery Act Broadband Initiatives Program (BIP) loan and a \$11.2 million grant that funded a 260-mile fiber optic cable network. Work was completed more than a year ahead of schedule, offering everyone in the service area access to high-speed broadband. Today, it's "full speed ahead" for ATMC's Internet users in Columbus County.

ATMC — founded in 1955 with help from the Rural Electrification Administration, the predecessor to RUS — has received RUS funding for several telecommunications projects that have helped the utility grow into the largest telephone cooperative in North Carolina. ATMC now serves more than 38,000 members.

USDA Helps the Dakotas' Standing Rock Sioux Tribe Repair Environmentally Hazardous, Failing System

RUS is the only Federal agency that provides funding exclusively for water and wastewater facilities in rural communities with populations of 10,000 or less and which cannot secure other financing and have urgent water and wastewater needs.

USDA funding is helping the Standing Rock Sioux Tribe repair and expand a failing sewage treatment system on tribal lands in North Dakota. This project will improve public health and allow for future expansion of homes and businesses in the area.

The Tribe is receiving a \$1 million grant to rehabilitate and enlarge an existing sewer lagoon treatment system and develop a 24-acre wetland. The new system will meet Environmental Protection Agency standards and replace a deteriorating 40-year-old lift station. The Tribe also received \$150,000 in design funds for the project from USDA in 2011.

A woman with shoulder-length reddish-brown hair, wearing a white floral-patterned short-sleeved top and black pants, stands smiling in an orchard. The orchard is filled with green trees bearing ripe, reddish-orange fruit. The scene is brightly lit, suggesting a sunny day. A blue text box is overlaid on the top right of the image.

Colorado

USDA Investments Pay Dividends for Rural Communities

A

riel Ruvolo, her husband, John, and their four children purchased a home in Sanford, CO, through USDA Rural Development's single-family direct loan program. "There is nothing better than having a place for all

of us to enjoy our time together," she said.

Prior to the purchase, the family was sharing a two-bedroom cabin with only one bathroom. Besides the basic problem of inadequate space, the pipes would often freeze and there was no place for the family to eat together. The family of six now has ample space. Their new home has four bedrooms, two bathrooms, and a large back yard. The living room has become the hub of the house.

"We didn't have a living room before, so we practically live in there now," Ruvolo said.

The fourth bedroom has allowed the family to have their daughter live with them permanently; something that was not possible before because of the limited space. John Ruvolo also likes the added luxury of being able to park at home. Before, he would have to park his truck in town and have his wife come pick

him up. Now, he can just step outside and be on his way.

Hotel Restored With USDA and Other Financing

The Windsor Hotel, a historic, luxury hotel built in 1874 in downtown Del Norte, CO, has been fully restored to its former glory, thanks in part to Rural Development. USDA provided a Business and Industry guarantee of about \$1.3 million to back loans from Del Norte Bank and 1st Southwest Bank. It also provided a Rural Business Enterprise Grant of almost \$100,000. The grant helped restore the second floor and furnish the conference center.

The hotel restoration was a long-term project completed through collaboration between many individuals and organizations. In addition to support from USDA, the hotel also received about \$1.5 million in private donations and State-based preservation grants. "We are proud that almost half of the hotel construction funds were given to minority- or women-owned businesses, with \$900,000 alone going to local Del Norte contractors," said Mark Jones, vice president of the Windsor Restoration and

Historical Preservation Committee.

The remodeled hotel re-opened in May 2012, with redesigned guest rooms, and an all-new courtyard and restaurant. The new hotel is bringing in more customers to neighboring businesses, and downtown traffic has increased.

USDA Helps Habitat for Humanity Improve Its Retail Outlet

Colleen Burke recently returned to her hometown of Montrose, CO, to become executive director of Habitat for Humanity of Montrose County. Little did Burke know what she was about to encounter. The organization was in the midst of a major construction project to convert a vacant building into the new location for the Habitat ReStore.

The ReStore is one of the main sources of revenue for Habitat for Humanity. The ReStore takes “gently used” construction materials, household goods, furniture, and appliances and resells them at reduced prices.

USDA provided Montrose County Habitat for Humanity with more than \$1 million in Community Facilities loan and grant funding to renovate the new retail location. Modifications included new windows, lighting, plumbing, a new roof, additional customer parking, and a drop-off area for donated goods.

The improved ReStore opened in September 2012. It is in a better location and is about double the size of the original store. Burke officiated at the ribbon-cutting ceremony to celebrate the opening. She said that by expanding the ReStore, they hope to have a much greater impact serving clients in the future.

Guaranteed Loan Program Helps Family Get Its Own Home

Saw Peter and his family are refugees from Burma who have started a new life in the United States. Thanks to a Guaranteed Home

Loan from USDA Rural Development, they have become first-time homeowners in Delta, CO.

When Peter, an agricultural worker, and his family first arrived in Delta, they lived in Alta de la Montana, a new 41-unit rental housing complex for low-income farm laborers and their families. Later, Peter started a new job with better pay, and he felt it was time to stop renting and get a home of his own.

Initially, he had concerns about whether his credit would be good enough to qualify for a mortgage. He worked with Cindy Webster from Republic Mortgage, a local lender participating in the USDA Rural Development Guaranteed Home Loan program, and learned that his credit was even better than he thought. Webster helped him throughout every stage of the application process, and he was subsequently approved for the loan.

The family moved into its new home in the summer of 2012. It will give Peter’s two sons a sense of permanency, and they will also benefit from educational opportunities at nearby good-quality schools.

Energy Savings for High Country Orchards

For the last 12 years, Theresa High and her husband have owned and operated the successful High Country Orchards in Palisade, CO. Palisade

is world-famous for its peaches, and High Country Orchards has been recognized not only for its peaches, but also for its innovative production and shipping methods. In the summer of 2009, First Lady Michelle Obama and her daughters toured the orchard and sampled the peaches. The business has also been featured in the New York Times and in other media.

The orchard includes 71 acres of peaches, 35 acres of wine grapes, 15 acres of cherries, a processing facility, and a country store. The Highs offer orchard tours, host events, and also sell their

products online to customers all across the United States.

With the business going well, Theresa High began to research sustainability and ways to make her operation more energy- and cost-efficient. At a horticulture event, she learned about USDA Rural Development's Renewable Energy for America Program (REAP). The family later applied for and was awarded two REAP grants for energy-related improvements.

The first grant was used last year to install a series of solar panels on a 1-acre parcel at the orchard. The second grant of almost \$26,300, awarded in 2012, will be used to improve the country store's cooling and lighting systems.

Veteran Helps to Build Her Own Home Through USDA "Sweat-Equity" Program

After serving her country in the Army for 8 years as a heavy equipment operator, and a 15-month tour in Iraq, Crystal Woolen decided to live in Palisade, CO.

"Palisade is similar to parts of Iraq, and it just felt right," she said. She is pursuing a degree in health care administration while working in the area. After she graduates, she hopes to help other returning soldiers readjust to life at home through programs at the Veterans Administration Center in Grand Junction, CO.

Woolen considered purchasing a home a few years ago for herself and her son, Angel, but her employment was changing and the timing wasn't right. She recently decided to pursue homeownership again. She contacted Housing Resources of Western Colorado, a local nonprofit housing agency, and learned about Rural Development's Self-Help Housing program.

Under this program, low-income individuals and families who are unable to buy adequate housing through conventional methods may participate in a self-help project, where, with supervision, they perform

about 65 percent of the construction labor on each other's homes. Savings from the reduction in labor costs allows them to obtain a low-interest mortgage through USDA Rural Development.

Woolen became part of a self-help group in which members began constructing their own homes in December, 2011, with technical oversight from Housing Resources of Western Colorado. Woolen said that the experience has been invaluable. In addition to learning home construction methods, she also learned how to manage a household budget, gained other skills that will prepare her for homeownership, and received credit counseling. "This program has given me a way to recapture a dream I thought I had lost," she said, adding: "I got it back."

Florida

New Opportunities for Local Families, Businesses, and Rural Economies

D

elvey and Cindy Dicks knew, that to keep their north Florida family farm productive for future generations, they would have to offset rising production costs and loss of tobacco crop revenue. They

wanted to successfully market their “North Florida Natural Black Angus” beef, but needed help to brand the product and establish a channel to sell it to the public.

USDA Rural Development provided them with a \$197,500 Value-Added Producer Grant to help them promote their brand and market their beef. The cows are raised on natural grains and fed on the farm with no added hormones, antibiotics, or animal byproducts. Today, consumers are purchasing the beef directly from the Fifth Generation Farms fresh foods market in Lake City, FL.

This fifth-generation farming and ranching family is an example of how USDA’s “Know Your Farmer, Know Your Food” initiative, which brings farmers together with consumers, can help producers boost their business. The development of the “North Florida Natural Black Angus” beef and “Fifth Generation Farms” brand has already had a positive impact on the community, benefitting more than 50 local businesses.

In just a few months, the Fifth Generation Farms market is already promoting products from 25 other local producers. Twelve new jobs have been created and more than 100 customers have participated in Know Your Farmer, Know Your Food educational seminars.

Company Goes Solar With Support From USDA

To maintain its competitive edge and retain its employees, NanoSonic Products, Inc., of Alachua, FL, needed to reduce energy costs.

USDA Rural Development provided the company with a \$44,625 Rural Energy for America Program (REAP) grant to purchase and install a solar photovoltaic system.

The renewable energy system has enabled NanoSonic to completely meet its energy needs and sell a large quantity of surplus energy back to the city’s electrical grid. This allows the company to remain

competitive, operate carbon-free, and focus spending on new technology development while retaining its highly skilled workforce.

Rural Development Brings Better Fire Protection to Small Florida Town

In 1997, downtown Madison, FL, was devastated by a fire that destroyed three local businesses. In past years, other structures also burned to the ground because the community lacked equipment that could combat fires in multi-story structures. Madison County also needed an aerial ladder truck to provide fire protection for the county’s remaining 350 multi-story structures, 5 public schools, and the 25 buildings on the North Florida Community College campus.

The City of Madison qualified for a \$387,000 Community Facility Economic Impact Initiative Grant from Rural Development to purchase an aerial ladder fire truck. The city was able to leverage the USDA grant with funding from other local partners.

Madison now has an essential piece of equipment that is always on call for city or county emergencies. During downtime, the ladder truck is used for fire-fighter training at North Florida Community College.

Small Company Invigorated by Debt Restructuring

Goodwin Lumber of Micanopy, FL, is a small company specializing in reclaiming original growth heart pine and heart cypress logs from southern rivers. It turns the logs into superior lumber and flooring products. River-recovered antique heart-pine or cypress wood is between 200 and 500 years old. These trees, which have been resting on the river bottom

for more than 150 years, have tighter grain and fewer, and smaller, knots. They are considered stronger, and more durable and stable, with a richer surface color.

Goodwin Lumber needed to restructure its maturing, high-interest mortgage and short-term debt to lower its operating costs. Rural Development approved a Business and Industry loan guarantee that reduced the company's interest rates. Refinancing allowed the firm to create and/or save 16 jobs and will ensure that the 37-year-old, community-based firm can continue to add value to the local economy.

Rural Development Helps Rebuild Deteriorating Rental Housing Complex

From the 1970s to the mid-1980s, USDA Rural Development helped build about 30 multi-family complexes per year in Florida that provide safe housing for low- and very low-income rural families. Today, 30 to

40 years later, many of those complexes need renovations and repairs.

In northwestern Florida, Rural Development partnered with the U.S. Department of Housing and Urban Development and Florida Housing Finance Corporation to renovate Cottondale Village Apartments. About \$5 million was invested in this 82-unit multi-family housing complex.

Energy improvements include the installation of new attic and wall insulation; Energy Star®-rated windows, appliances, and ceiling fans; programmable thermostats; new heating and air conditioning units; and water-efficient toilets, faucets, and showerheads. The interior was completely renovated, including a new computer lab and library, and exterior improvements included covered pavilions, and new volleyball courts and playgrounds.

USDA Boosts the Fortunes of the North Florida Clam Industry

Clam-based aquaculture is a major industry in Cedar Key, FL. Cedar Key's clam industry produces about 75 percent of all clams harvested in Florida.

Local clammers rely on leased ocean bed plots to raise clams. Access to the clam beds is key to farming and harvesting, but the deteriorating condition of local access points was an increasing problem for fishermen. Their main boat ramp was also in need of major repairs.

Rural Development provided the city with a

\$164,000 Rural Business Enterprise Grant to construct a concrete boat launch at the city's Anchor Hole Boat Ramp. The launch is allowing 36 small clammers to safely and efficiently launch their boats and offload their harvests. These businesses contribute to about 420 clam industry-related jobs in Cedar Key.

Wisconsin

Forging Partnerships to Boost the Local Economy

T

he City of Black River Falls, in western Wisconsin, upgraded its century-old dam with help from Rural Development. The dam was constructed in 1908 and several of its components were at the end of their lifespan.

USDA provided a \$5 million Community Facilities direct loan that funded almost half of the project. The improvements were completed in the spring of 2012. The project included replacing the existing, eight-gate dam with a six-gate dam with a low-flow generator. In addition to the overall dam replacement, other work included the reconstruction of a non-overflow section, patching, replacement of a retaining wall, and installation of a hydroelectric unit that increases energy generated by the dam.

“We had two generators producing power for us but, when the water level was low, we couldn’t run them,” said Mayor Ron Danielson. “Trying to get greener, we looked at adding a low-flow generator. We also needed to make sure that we were not raising power costs to an unaffordable level. Working with

USDA Rural Development provided us with the opportunity to build our new, more energy-efficient dam. It took time and a lot of paperwork, but it was well worth the effort. When tax dollars are involved, we should not want it any other way.”

Black River Falls’ modern new facility has improved its capacity to generate clean, hydroelectric power. The dam improvements will also allow for economic expansion, business growth, and a more vibrant community.

Community Commerce Center Brings New Opportunities to Gays Mills

Gays Mills, WI, is a village of 600 people along the Kickapoo River. Twice in recent years, Gays Mills has been almost completely destroyed by rising river water that flooded the village. After the second flood in 2008, village leaders implemented a plan to relocate the entire village to higher ground. The new infrastructure was completed in the summer of 2011.

USDA Rural Development provided a \$761,500 Community Facilities direct loan for construction

of the Community Commerce Center, a complex that includes office space, the library, a culinary center, a meeting room, and an area for a farmers market. The commerce center opened its doors in February 2012.

The culinary center is a 2,450-square-foot community kitchen and commercial facility with high-end appliances, including a walk-in freezer and cooler. Farmers, bakers, cooks, and caterers can rent it for their food preparation and specialty needs.

“With its new village hall, larger public library, and community events room, the commerce center is evidence that we’re capable not just of survival and recovery, but also of needed change,” said Gays Mills President Craig Anderson.

Gays Mills is on the mend from the devastating impact of the floods. Residents have safe housing away from the flood plain, businesses are up and running, and the future looks bright.

Food Processing Plant, Funded Through Partnerships, Provides Jobs

Intevation Food Group, a start-up company, was having difficulty obtaining financing for a food manufacturing plant even though it had a significant amount of investor capital. Intevation partnered with CAP Services, Inc., a community action agency serving north-central Wisconsin, and obtained financing to construct the plant under a lease-purchase agreement. CAP Services secured a \$5.9-million USDA Rural Development Business and Industry (B&I) guarantee on a loan made by United Farm Credit Services.

Today, 126 employees, one-third of whom are minorities, are working at the 100,000-square-foot plant in Plover, WI. Seasonal positions bring the total workforce at the plant up to 200.

“Intevation Food Group is a wonderful example of what every community wants: a local company, backed by local investors, creating jobs that keep our community strong,” said CAP Services President and CEO Mary Patoka.

“The value of its payroll ripples to local businesses as employees use their paychecks for

purchases,” she continued. “The company sells its products nationwide but the profits are plowed right back into our community, building wealth here. We are proud to have been a partner, along with the USDA and others, to finance the company’s start.”

Jobs Created Through Guaranteed Loan Program

Salm Partners, LLC, is a food manufacturer based in Denmark, WI, a village of about 2,000 people. The company started with a 25,000-square-foot facility to manufacture smoked sausage and hot dogs, and soon grew by acquiring a neighboring, much-larger facility.

With backing from USDA Rural Development’s B&I Guaranteed Loan program, Denmark State Bank provided financing for Salm Partners’ latest \$16-million business expansion. The expansion created 93 new jobs, bringing the total number of permanent employees at the company up to about 300.

“Through USDA’s program, we obtained loans that we used for manufacturing equipment and to

expand production facilities for ready-to-eat sausages and hot dogs,” said company partner Christopher P. Salm. “Since investing in the expansion, Salm Partners has increased employment by more than 60 percent.”

Denmark State Bank officials saw how the project would help the local economy. “The Business and Industry Guaranteed Loan program is a great tool for us. It enables our small bank to meet the needs of a larger, growing company and stay within our legal lending limits,” said bank Executive Vice President Carl T. Laveck. “We like to refer to this as a jobs program because, with the proceeds from the guaranteed loan, Salm Partners created almost 100 new jobs for our small community. The multiplier effect that this company has had is a tremendous boost to the economy.”

Regulatory Burdens Lifted Through New Multi-Agency Agreement

In an effort to streamline government paperwork for multi-family housing applicants, Wisconsin in 2012 unveiled an initiative to increase communication,

ensure timeliness of reviews, and simplify the application process for Wisconsin affordable rental housing developers and owners.

Officials from USDA Rural Development, the U.S. Department of Housing and Urban Development, and the Wisconsin Housing and Economic Development Authority signed an agreement that allows the State to align Subsidy Layering Review requirements between the agencies to reduce duplicative and unnecessary paperwork, and help State and Federal agencies better serve low-income families who live in rental housing.

All levels of government now work together to better coordinate services and remove redundancies. By streamlining the process, the agencies are finding efficiencies, leveraging resources, and helping housing developers generate greater opportunities to create jobs, while serving the public as cost-effectively as possible. The new initiative benefits owners, developers, tenants, and local communities that are working to create and preserve affordable rental housing.

The U.S. Department of Agriculture (USDA) prohibits discrimination against its customers. If you believe you experienced discrimination when obtaining services from USDA, participating in a USDA program, or participating in a program that receives financial assistance from USDA, you may file a complaint with USDA. Information about how to file a discrimination complaint is available from the Office of the Assistant Secretary for Civil Rights.

To file a complaint of discrimination, complete, sign and mail a program discrimination complaint form, available at any USDA office location or online at www.ascr.usda.gov, or write to:

USDA
Office of the Assistant Secretary for Civil Rights
1400 Independence Avenue, S.W.
Washington, D.C. 20250-9410

Or call toll free at (866) 632-9992 (voice) to obtain additional information, the appropriate office or to request documents. Individuals who are deaf, hard of hearing or have speech disabilities may contact USDA through the Federal Relay service at (800) 877-8339 or (800) 845-6136 (in Spanish). USDA is an equal opportunity provider, employer and lender.

Persons with disabilities who require alternative means for communication of program information (e.g., Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

USDA

The logo graphic for the USDA, featuring a stylized green field with white curved lines representing a horizon or furrows in the soil.
