## CITATION

U.S. Census Bureau, 2000 Census of Population and Housing, Guam Summary File: Technical Documentation, 2002.

## TYPE OF FILE

## Summary statistics.

## SUBJECT CONTENT

The Guam Summary File (GSF) contains Census 2000 data compiled from all people and housing units. Population items include sex; age; ethnic origin and race; household relationship; urban and rural; households and families; group quarters; marital status; grandparents as caregivers; language spoken at home and frequency of English usage; place of birth, parents' place of birth, citizenship status, and year of entry; migration and main reason for moving; children ever born (fertility); place of work; journey to work (commuting); school enrollment and educational attainment; vocational training; veteran status; military dependency; disability; employment status; industry, occupation, and class of worker; income; and poverty status. Housing items include occupancy status; vacancy status; tenure; urban and rural; number of rooms; number of bedrooms; water supply; year moved into unit; household size and occupants per room; units in structure; year structure built; telephone service; air conditioning; plumbing and kitchen facilities (bathtub or shower; toilet facilities; cooking facilities); source of water; sewage disposal; types of building materials; battery-operated radio; condominium status; vehicles available; mortgage status; value of home; monthly rent; and shelter costs.

In the GSF, population tables are identified with a " P " and housing tables are identified with an " H " prefix, followed by a sequential number. The "P" and "H" tables are shown for the block and higher levels of geography, the "PBG" and "HBG" tables are shown for the block group and higher levels of geography, and the "PCT" and "HCT" tables are shown for the census tract and higher levels of geography.

The GSF contains a total of 397 unique tables- 248 population tables and 149 housing tables. The chart below summarizes the geographic coverage available for the tables.

| Tables are shown | Population Tables (248) | Housing Tables (149) |
| :---: | ---: | ---: |
| To the block level and higher $\ldots \ldots \ldots$ | P1 through P34 | H1 through H12 |
| To the block group level and higher.... | PBG1 through PBG131 | HBG1 through HBG115 |
| To the census tract level and higher... | PCT1 through PCT83 | HCT1 through HCT22 |

The GSF includes population and housing characteristics for the total population. Population and housing items may be cross tabulated. Selected aggregates and medians also are provided. A complete listing of subjects in this file is found in the section, "Subject Locator."

## GEOGRAPHIC CONTENT

This abstract lists the most frequently accessed geographic levels. The "Summary Level Sequence Chart" section outlines the hierarchical and inventory geographic summaries in their entirety.

## State Files

GSF provides data for these areas and their subareas in hierarchical sequence down to the block, block group, or census tract level, depending on the matrices presented. The file structure includes, but is not limited to the following geographic entities:

```
State }\mp@subsup{}{}{1
    County2
        County subdivision3
            Place (or place part)4
                    Census tract
                    Block group
                        Block
```

GSF also has inventory (complete) summaries for the following geographic areas:
Place
Census tract
Block group

## USER UPDATES

The section on User Updates informs data users about corrections, errata, and related explanatory information. These updates provide information about unique characteristics, changes, or corrections. Census 2000 user updates are available on the Census Bureau's Internet site at www.census.gov/main/www/cen2000.html. Users also can register to receive user updates by e-mail by contacting Customer Services Center, Marketing Services Office, U.S. Census Bureau on 301-763-INFO (webmaster@census.gov).

## RELATED PRODUCTS

Census 2000: PHC-4, Social, Economic, and Housing Characteristics. This is a series of reports for the Island Areas-U.S. Virgin Islands, Guam, the Commonwealth of the Northern Mariana Islands, and American Samoa. These reports will be made available on the Internet (PDF) and as a printed report. They are scheduled for release in 2003.

## FILE ORDERING

For ordering and pricing information, access the online catalog at the Census Bureau's Internet site (www.census.gov) or contact the Census Bureau's Customer Services Center (301-763-INFO).

## Chapter 2. <br> How to Use This File

## INTRODUCTION

This chapter serves as a guide for data users to both the file and the technical documentation. Novice users trying to understand how to use the documentation and the file should read this chapter first. Please pay particular attention to the section titled Data Structure and Segmentation. This structure is a new approach for Census 2000.

## DATA FORMAT AND ACCESS TOOLS

Users of the DVD/CD-ROM can access the file information in two ways. The DVD/CD-ROM contains software that aggregates user-defined areas, allows for multiple geographic selections, and creates customized reports.

Users can also utilize off-the-shelf standard software packages to manipulate the data. The data on the DVD/CD-ROM are in a standard proprietary format that can easily be imported into other software packages.

Flat ASCII files are available for downloading via FTP from the American FactFinder Web site or from ftp://ftp2.census.gov/census2000/. They are also available as an on-demand CD-ROM product. In ASCII products, the geographic header record file contains fixed fields while the data portion, including the geographic links, are in comma-delimited format.

## FILE NAMING CONVENTIONS

File names follow a predefined structure. For the Guam Summary File, all geoheader files are named gugeor_sfia. The gu is the United States Postal Service (USPS) 2-character abbreviation for Guam. The geo indicates a geographic file. The $r$ indicates the release number of the product. In the initial file release, the $r$ field, an alpha sequence letter ( $a, b$, etc.) is dropped. For example, the geoheader file for Guam is named gugeo_sfia. If there were a re-release of this file, it would be named gugeoa_sfia. The sfia in each file name, always preceded with a "_", indicates this is the summary file (sf) for one of the island areas (ia).

Data files are named guseqr where gu is the USPS code for Guam, seq is the file sequence number, and $r$ is the file re-release indicator. For example, file gu000010_sfia is the tenth segment file (00010) in the Guam file set. The sfia, preceded by a "_", indicates the file is a summary file for the Island Areas. As with the geo files, the " $r$ " field is dropped on the first release of the data.

## Reading the Geographic Header Record

The geographic header record, Figure 2-3 at the end of this chapter, defines each field and provides its data dictionary reference name, size, starting position and data type. A slightly different presentation of the header record appears in the identification section of the Data Dictionary (Chapter 7). In Figure 2-3, the information in each summary level column is a guide to the presence or absence of additional geographic information on that specific summary level. For example, on the column for summary level 040 , we see ' $x$ ' for the first 11 fields, indicating that there will be information for those fields. In the county field, there is no ' $x$ ' indicating that there is no code for county in summary level 040 . Since 040 is the summary level for state or state equivalent (Guam), this is perfectly logical.

## Record Identification

File identification (FILEID), state/US abbreviation (STUSAB), summary levels (SUMLEV) and the geographic component codes (GEOCOMP) are critical elements in identifying the geographic level
for each record. The STUSAB field identifies the highest level of geography for the file. In state files, it identifies the individual state. For Guam files, the following FILEID and STUSAB codes are used:

|  | FILEID | STUSAB |
| :--- | :--- | :--- |
| Guam Summary File | 'SFIA' | 'GU' |

## Summary Level Sequence Chart

The Summary Level Sequence Chart (Chapter 4) identifies each geographic level and provides the code that is in the SUMLEV field. It is easy to determine the code for the desired geography if you remember that the last geographic area type listed in the sequence identifies the geography of the summary level; the prior codes simply identify the hierarchy. See the example below:

## 140 State-County-Census Tract

In summary level 140, the record contains data for a census tract within a county within a state. Census tracts are uniquely numbered within a county and do not cross county boundaries. Since counties do not cross state boundaries, this is a simple application. Thus, summary level 140 provides data for a complete census tract. When reading the Summary Level Sequence Chart, it is important to recognize that dashes (-) separate the individual hierarchies while slashes separate different types of geography (such as place/remainder) within the same hierarchy.

## Data Structure and Segmentation

The segmentation information discussed below applies to the ASCII version of the CD-ROM/DVD files, the FTP files downloaded from the Census Bureau's FTP site, and any tape-to-CD files that are custom created by the Census Bureau.

It is important to have some clarification on definitions. The data for an individual state are known as the file set. This is the package that an individual CD-ROM or state FTP directory will contain.

It is easiest to think of the file set as a logical file. However, this logical file for Guam consists of 31 physical files: the geographic header file and file 01 through file 31 . This design is a change from census files from earlier decades. The larger size of the tables made this necessary. By offering smaller files, users can work only with the file containing the table they need. Figure 2-2 provides the file/table details.

A unique logical record number (LOGRECNO in the geographic header) is assigned to all files for a specific geographic entity. This is done so all records for that specific entity can be linked together across files. Besides the logical record number, other identifying fields are also carried over from the geographic header file to the table files. These are file identification (FILEID), state/U.S. abbreviation (STUSAB), characteristic iteration (CHARITER), and characteristic iteration file sequence number (CIFSN).

See Figure 2-1 below for geographic header information for File 01 - File 31.
Figure 2-1. File Set Structure Schematic

The geographic header record is standard across all electronic data products from Census 2000. It is in a fixed field format as described in the data dictionary. However, when geographic header fields are used to provide geographic linkage across files in file 01-31, they are in the same format as the rest of the file-comma delimited.

Some header fields which appear in all 32 files (geographic header and 31 table files) are not used. For example, the characteristic iteration (CHARITER) field is always coded as '000' on the Guam Summary File.

Figure 2-2. File/Table Segmentation

| File name (CIFSN) | Number of cells | Starting matrix number | Ending matrix number |
| :---: | :---: | :---: | :---: |
| gugeo_sfia.dat |  |  |  |
| gu000001_sfia.dat. | 243 | P1 | P15 |

| gu000021_sfia.dat. | 203 | PCT72 | PCT74 |
| gu000022_sfia.dat. | 249 | PCT75 | PCT77 |
| gu000023_sfia.dat. | 98 | PCT78 | PCT83 |
| gu000024_sfia.dat. | 78 | H1 | H12 |
| gu000025_sfia.dat. | 246 | HBG1 | HBG28 |
| gu000026_sfia.dat. | 238 | HBG29 | HBG62 |
| gu000027_sfia.dat. | 249 | HBG63 | HBG106 |
| gu000028_sfia.dat. | 35 | HBG107 | HBG115 |
| gu000029_sfia.dat. | 240 | HCT1 | HCT8 |
| gu000030_sfia.dat. | 235 | HCT9 | HCT18 |
| gu000031_sfia.dat. | 117 | HCT19 | HCT22 |

## Table Numbers

The numbers assigned to tables provide information about the lowest level of geography. Tables labeled Pnn are population tables where the lowest level of geography is block. Tables labeled PBGnn are population tables where the lowest level of geography is block groups. Tables labeled PCTnn are population tables where the lowest level of geography is census tracts. Housing tables follow the identical pattern but are preceded by an H .

## User Updates

Census 2000 Notes and Errata, which contains user updates for individual files as well as the corrected counts issued by the Count Question Resolution program, is available on the web at http://www.census.gov/prod/cen2000/notes/errata.pdf. User updates are also included in the biweekly electronic newsletter, Census Product Update. To receive the newsletter by e-mail, register at http://www.census.gov/mp/www/cpu.html, contact Customer Services Center, Marketing Services Office, U.S. Census Bureau on 301-763-4636, or send e-mail to webmaster@census.gov.

# Chapter 3. Subject Locator 

## CONTENTS

|  | Page |
| :---: | :---: |
| General Information | 3-1 |
| Subject Locator | 3-1 |

## GENERAL INFORMATION

The Subject Locator is an index designed to quickly identify the tables (matrices) in the summary file. This index is arranged in alphabetical order by the name of a subject. Under each subject heading appears the universe or the type of entry being tabulated (shown in italics) and the relevant table number. Each variable is arranged alphabetically by universe, then by variable of cross tabulation, if any. If you are looking for a table tabulating age by sex for all persons, check the index under either of the two variables ("age" or "sex"). See the sections "List of Tables (Matrices)" and "Summary Table Outlines" for specific examples.

## SUBJECT LOCATOR

## Chapter 4. <br> Summary Level Sequence Chart

Summary levels specify the content and the hierarchical relationships of the geographic elements that are required to tabulate and summarize data. In the Summary Level Sequence Chart which follows, the summary level code precedes the summary level area, and symbols are used with special meaning for summary levels:

Hyphen "-" separates the elements of a hierarchy.
Slash "/" denotes equivalent areas that have different names.
Parentheses "( )" are not used in the specification for summary levels, but are used occasionally in the usual and customary manner in statements of clarification.

| Geographic components | Summary level |
| :---: | :---: |
| 00, 01, 04, 28-32, 43-48 | 040 State ${ }^{1}$ |
| 00, 01, 43 | 050 State-County ${ }^{2}$ |
| 00 | 060 State-County-County Subdivision ${ }^{3}$ |
| 00 | 070 State-County-County Subdivision-Place/Remainder ${ }^{4}$ |
| 00 | 080 State-County-County Subdivision-Place/Remainder-Census Tract |
| 00 | 085 State-County-County Subdivision-Place/Remainder-Census Tract-Urban/Rural 090 State-County-County Subdivision-Place/Remainder-Census Tract- |
| 00 | Urban/Rural-Block Group |
| 00 | 100 State-County-County Subdivision-Place/Remainder-Census Tract-Urban/Rural-Block Group-Block |
| 00 | 140 State-County-Census Tract |
| 00 | 150 State-County-Census Tract-Block Group |
| 00 | 160 State-Place |
| 00 | 155 State-Place-County |
| 00 | 420 State-Urban Area |
| 00 | 461 State-Urban Area-Central Place |
| 00 | 431 State-Urban Area-County |
| 00 | 441 State-Urban Area-County-County Subdivision |
| 00 | 451 State-Urban Area-County-County Subdivision-Place/Reminder |

${ }^{1}$ American Samoa, Guam, Commonwealth of the Northern Mariana Islands.
${ }^{2}$ The first-order subdivision of the island. In American Samoa, district or island (the island record repeats the first-order subdivision); in Guam, this record repeats Guam; in the Commonwealth of the Northern Mariana Islands, municipality.
${ }^{3}$ The "minor civil division" of the first-order subdivision. In American Samoa, county or island (the island record repeats the first-order subdivision); in Guam, election district; in the Commonwealth of the Northern Mariana Islands, municipal district.
${ }^{4}$ Village in American Samoa; Census designated place (CDP) in Guam and the Commonwealth of the Northern Mariana Islands.

## Chapter 6. <br> Summary Table Outlines

## POPULATION SUBJECTS (SUMMARIZD TO BLOCK LEVEL)

## Basic Population Totals

## P1. TOTAL POPULATION [1]

Universe: Total population
Total

## P2. URBAN AND RURAL [5]

Universe: Total Population
Total:
Urban:
Inside urbanized areas
Inside urban clusters
Rural

## P3. ETHNIC ORIGIN AND RACE [15]

Universe: Total population
Total:
Population of one ethnic origin or race:
Native Hawaiian and Other Pacific Islander alone
Asian alone
White alone
Black or African American alone
Other ethnic origin or race alone
Population of two ethnic origins or races:
Native Hawaiian and Other Pacific Islander; Asian
Native Hawaiian and Other Pacific Islander; White
Native Hawaiian and Other Pacific Islander; Other ethnic origin or race, except White and Asian
Asian; White
Asian; Other ethnic origin or race, except Native Hawaiian and Other Pacific Islander and White
White; Other ethnic origin or race, except Native Hawaiian and Other Pacific Islander and Asian
Any other combination of two ethnic origins or races

## P4. ETHNIC ORIGIN AND RACE FOR THE POPULATION 18 YEARS AND OVER [15]

```
Universe: Population 18 years and over
Total:
    Population of one ethnic origin or race:
        Native Hawaiian and Other Pacific Islander alone
        Asian alone
        White alone
        Black or African American alone
        Other race or ethnic origin alone
    Population of two ethnic origins or races:
        Native Hawaiian and Other Pacific Islander; Asian
        Native Hawaiian and Other Pacific Islander; White
        Native Hawaiian and Other Pacific Islander; Other ethnic origin or race, except White and
        Asian
        Asian; White
        Asian; Other ethnic origin or race, except Native Hawaiian and Other Pacific Islander and
        White
        White; Other ethnic origin or race, except Native Hawaiian and Other Pacific Islander and
        Asian
    Any other combination of two ethnic origins or races
```

P5. SEX BY AGE [49]
Universe: Total population
Total:
Male:
Under 5 years
5 to 9 years
10 to 14 years
15 to 17 years
18 and 19 years
20 years
21 years
22 to 24 years
25 to 29 years

## Households, Families, and Relationship

P8. AGGREGATE POPULATION IN HOUSEHOLDS [1]
Universe: Population in households
Total
P9. AVERAGE HOUSEHOLD SIZE [1] (2 expressed decimals)

Universe: Households
Average household size

## P10. HOUSEHOLD SIZE BY HOUSEHOLD TYPE BY PRESENCE OF OWN CHILDREN UNDER 18 YEARS [19]

```
Universe: Households
Total:
    1-person household:
        Male householder
        Female householder
    2-or-more-person household:
    Family households:
        Married-couple family:
            With own children under }18\mathrm{ years
            No own children under }18\mathrm{ years
        Other family:
            Male householder, no wife present:
                    With own children under }18\mathrm{ years
                    No own children under }18\mathrm{ years
            Female householder, no husband present:
                    With own children under }18\mathrm{ years
                    No own children under }18\mathrm{ years
    Nonfamily households:
        Male householder
        Female householder
```

P11. HOUSEHOLDS BY PRESENCE OF PEOPLE UNDER 18 YEARS BY HOUSEHOLD TYPE
[19]
Universe: Households
Total:
Households with one or more people under 18 years:
Family households:
Married-couple family
Other family:
Male householder, no wife present
Female householder, no husband present
Nonfamily households:
Male householder
Female householder
Households with no people under 18 years:
(Repeat HOUSEHOLD TYPE)

## P12. HOUSEHOLDS BY AGE OF HOUSEHOLDER BY HOUSEHOLD TYPE (INCLUDING LIVING ALONE) BY PRESENCE OF OWN CHILDREN UNDER 18 YEARS [31]

```
Universe: Households
Total:
    Householder 15 to 64 years:
        Family households:
        Married-couple family:
            With own children under }18\mathrm{ years
            No own children under }18\mathrm{ years
        Other family:
            Male householder, no wife present:
                    With own children under }18\mathrm{ years
                    No own children under }18\mathrm{ years
                    Female householder, no husband present:
                    With own children under }18\mathrm{ years
                    No own children under }18\mathrm{ years
```

## P12. HOUSEHOLDS BY AGE OF HOUSEHOLDER BY HOUSEHOLD TYPE (INCLUDING LIVING ALONE) BY PRESENCE OF OWN CHILDREN UNDER 18 YEARS [31]-Con.

```
Total-Con.
    Householder 15 to 64 years-Con.
        Nonfamily households:
            Householder living alone
            Householder not living alone
    Householder 65 years and over:
        (Repeat HOUSEHOLD TYPE BY PRESENCE OF OWN CHILDREN UNDER 18 YEARS)
```

## P13. HOUSEHOLD TYPE BY AGE OF HOUSEHOLDER [19]

Universe: Households
Total:
Family households:
Householder 15 to 24 years
Householder 25 to 34 years
Householder 35 to 44 years
Householder 45 to 54 years
Householder 55 to 64 years
Householder 65 to 74 years
Householder 75 to 84 years
Householder 85 years and over
Nonfamily households:
(Repeat AGE OF HOUSEHOLDER)
P14. HOUSEHOLDS BY PRESENCE OF PEOPLE 60 YEARS AND OVER BY HOUSEHOLD SIZE BY HOUSEHOLD TYPE [11]

```
Universe: Households
Total:
    Households with one or more people 60 years and over:
        1-person household
        2-or-more-person household:
            Family households
        Nonfamily households
    Households with no people 60 years and over:
        (Repeat HOUSEHOLD SIZE BY HOUSEHOLD TYPE)
P15. HOUSEHOLDS BY PRESENCE OF PEOPLE 65 YEARS AND OVER BY HOUSEHOLD SIZE
BY HOUSEHOLD TYPE [11]
```

```
Universe: Households
Total:
    Households with one or more people 65 years and over:
        1-person household
        2-or-more-person household:
            Family households
            Nonfamily households
    Households with no people 65 years and over:
        (Repeat HOUSEHOLD SIZE BY HOUSEHOLD TYPE)
```

## P16. AGE BY HOUSEHOLD TYPE (INCLUDING LIVING ALONE) [16]

Universe: Population 60 years and over
Total:
60 to 64 years:
In households: Living alone Not living alone In group quarters
65 to 74 years:
(Repeat HOUSEHOLD TYPE)
75 years and over:
(Repeat HOUSEHOLD TYPE)

## P17. HOUSEHOLDS BY PRESENCE OF NONRELATIVES [3]

Universe: Households
Total:
Households with one or more nonrelatives
Households with no nonrelatives
P18. HOUSEHOLD TYPE BY HOUSEHOLD SIZE [16]
Universe: Households
Total:
Family households:
2-person household
3-person household
4-person household
5-person household
6-person household
7-or-more-person household
Nonfamily households:
1-person household
2-person household
3-person household
4-person household
5-person household
6-person household
7-or-more-person household
P19. HOUSEHOLD TYPE (INCLUDING LIVING ALONE) BY RELATIONSHIP [27]
Universe: Total population
Total:
In households:
In family households:
Householder:
Male
Female
Spouse
Child:
Natural-born
Adopted
Step
Grandchild
Brother or sister
Parent
Other relatives
Nonrelatives

                    Under 6 years and 6 to 17 years
                    6 \text { to } 1 7 \text { years only}
            No own children under }18\mathrm{ years
            Female householder, no husband present:
            With own children under }18\mathrm{ years:
                    Under 6 years only
                    Under 6 years and 6 to 17 years
                    6 to }17\mathrm{ years only
            No own children under }18\mathrm{ years
```

## P26. OWN CHILDREN UNDER 18 YEARS BY FAMILY TYPE BY AGE [26]

```
Universe: Own children under 18 years
Total:
    In married-couple families:
        Under 3 years
        3 and 4 years
        5 years
        6 to 11 years
        12 and 13 years
        14 years
        15 to 17 years
    In other families:
        Male householder, no wife present:
            (Repeat AGE)
        Female householder, no husband present:
        (Repeat AGE)
```

## P27. FAMILY TYPE BY PRESENCE OF RELATED CHILDREN UNDER 18 YEARS BY AGE OF RELATED CHILDREN [20]

Universe: Families
Total:
Married-couple family:
With related children under 18 years:
Under 6 years only
Under 6 years and 6 to 17 years
6 to 17 years only
No related children under 18 years
Other family:
Male householder, no wife present:
With related children under 18 years:
Under 6 years only
Under 6 years and 6 to 17 years
6 to 17 years only
No related children under 18 years
Female householder, no husband present:
With related children under 18 years:
Under 6 years only
Under 6 years and 6 to 17 years
6 to 17 years only
No related children under 18 years

## Group Quarters

## P28. GROUP QUARTERS POPULATION BY GROUP QUARTERS TYPE [9]

```
Universe: Population in group quarters
Total:
    Institutionalized population (101-107, 201-209, 301-307, 400-410):
        Correctional institutions (101-107)
        Nursing homes (301-307)
        Other institutions (201-209, 400-410)
    Noninstitutionalized population (501, 601-604, 701-706, 801-810, 900-906, 908-909, 911):
        College dormitories (includes college quarters off campus) (501)
        Military quarters (601-603)
        Other noninstitutional group quarters (604, 701-706, 801-810, 900-906, 908-909, 911)
```

## P29. GROUP QUARTERS POPULATION BY SEX BY AGE BY GROUP QUARTERS TYPE

Universe: Population in group quarters
Total:

Married-couple family
Other family:
Male householder, no wife present
Female householder, no husband present
Nonfamily households:
Male householder:
Living alone
Not living alone
Female householder:
Living alone
Not living alone

## HBG5. TENURE BY HOUSEHOLD TYPE [15]

Universe: Occupied housing units
Total:
Owner occupied:
Family households:
Married-couple family
Other family
Nonfamily households:
Male householder
Female householder
Renter occupied:
(Repeat HOUSEHOLD TYPE)

## Rooms and Occupants Per Room

## HBG6. TENURE BY OCCUPANTS PER ROOM [13]

Universe: Occupied housing units
Total:
Owner occupied: 0.50 or less occupants per room 0.51 to 1.00 occupants per room 1.01 to 1.50 occupants per room 1.51 to 2.00 occupants per room 2.01 or more occupants per room

Renter occupied:
(Repeat OCCUPANTS PER ROOM)

## HBG7. AGE OF HOUSEHOLDER BY OCCUPANTS PER ROOM [13]

Universe: Occupied housing units
Total:
Householder 15 to 34 years:
1.00 or less occupants per room
1.01 to 1.50 occupants per room
1.51 or more occupants per room

Householder 35 to 64 years:
(Repeat OCCUPANTS PER ROOM)
Householder 65 years and over:
(Repeat OCCUPANTS PER ROOM)
HBG8. PLUMBING FACILITIES BY OCCUPANTS PER ROOM [9]
Universe: Occupied housing units
Total:
Complete plumbing facilities:
1.00 or less occupants per room 1.01 to 1.50 occupants per room 1.51 or more occupants per room

Lacking complete plumbing facilities: (Repeat OCCUPANTS PER ROOM)

## HBG9. ROOMS [10]

Universe: Occupied housing units
Median year householder moved into unit -
Total
Owner occupied
Renter occupied

## Bedrooms

## HBG23. BEDROOMS [7]

Universe: Housing units
Total:
No bedroom
1 bedroom
2 bedrooms
3 bedrooms
4 bedrooms
5 or more bedrooms
HBG24. TENURE BY BEDROOMS [15]
Universe: Occupied housing units
Total:
Owner occupied:
No bedroom
1 bedroom
2 bedrooms
3 bedrooms
4 bedrooms
5 or more bedrooms
Renter occupied:
(Repeat BEDROOMS)

## Material Used for Outside Walls, Roof, and Foundation

## HBG25. MAIN TYPE OF MATERIAL USED FOR OUTSIDE WALLS [6]

Universe: Housing units
Total:
Poured concrete
Concrete blocks
Metal
Wood
Other

## HBG26. MAIN TYPE OF MATERIAL USED FOR ROOF [5]

Universe: Housing units
Total:
Poured concrete
Metal
Wood
Other
HBG27. MAIN TYPE OF MATERIAL USED FOR FOUNDATION [4]
Universe: Housing units
Total:
Concrete
Wood pier or pilings
Other
HBG28. TYPE OF OUTSIDE WALLS BY TYPE OF ROOF [13]
Universe: Housing units
Total:
Poured concrete and concrete block walls:
With concrete roof
With metal roof
With other roof
Wood walls:
With metal roof
With wood roof
With other roof
Other walls (including metal):
With metal roof
With wood roof
With other roof

## HBG29. TYPE OF FOUNDATION BY TYPE OF ROOF [13]

Universe: Housing units
Total:
Concrete foundation:
With concrete roof
With metal roof
With other roof
Wood pier or pilings foundation:
With metal roof
With wood roof
With other roof
Other foundation:
With metal roof
With wood roof
With other roof

## Vehicles Available, Plumbing Facilities, and Kitchen Facilities

HBG30. TENURE BY VEHICLES AVAILABLE [15]

```
Universe: Occupied housing units
Total:
    Owner occupied:
        No vehicle available
        1 vehicle available
        2 vehicles available
        3 vehicles available
        4 vehicles available

```

## HBG32. AGGREGATE NUMBER OF VEHICLES AVAILABLE BY TENURE [3]

```
Universe: Occupied housing units
Aggregate number of vehicles available:
Owner occupied
Renter occupied
```

## HBG33. PLUMBING FACILITIES [3]

Universe: Housing units
Total:
Complete plumbing facilities
Lacking complete plumbing facilities

## HBG34. TENURE BY PLUMBING FACILITIES [7]

Universe: Occupied housing units
Total:
Owner occupied:
Complete plumbing facilities
Lacking complete plumbing facilities
Renter occupied:
(Repeat PLUMBING FACILITIES)

## HBG35. PLUMBING FACILITIES BY OCCUPANTS PER ROOM BY YEAR STRUCTURE BUILT [15]

Universe: Occupied housing units
Total:
Complete plumbing facilities:
1.00 or less occupants per room:

Built 1950 or later
Built 1949 or earlier
1.01 or more occupants per room:
(Repeat YEAR STRUCTURE BUILT)
Lacking complete plumbing facilities:
(Repeat OCCUPANTS PER ROOM BY YEAR STRUCTURE BUILT)

## HBG36. WATER SUPPLY [7]

Universe: Housing units
Total:
Hot and cold piped water in unit
Hot and cold piped water in building, not in unit
Only cold piped water in unit
Only cold piped water in building, not in unit
Only cold piped water outside building
No piped water

## HBG37. BATHTUB OR SHOWER [5]

Universe: Housing units
Total:
With bathtub or shower in unit
With bathtub or shower in building, not in unit
With bathtub or shower outside building
No bathtub or shower

## HBG38. TYPE OF TOILET FACILITIES [8]

Universe: Housing units
Total:
Flush toilet:
In unit
In building, not in unit
Outside building
No flush toilet:
Outhouse or privy
Other or none

## HBG39. MAIN COOKING FACILITIES [4]

Universe: Housing units
Total:
Cooking facilities inside building
Cooking facilities outside building
No cooking facilities

## HBG40. LOCATION OF MAIN COOKING FACILITIES BY TYPE OF MAIN COOKING FACILITIES [15]

```
Universe: Housing units with cooking facilities
Total:
    Main cooking facilities inside building:
        Electric stove
        Kerosene stove
        Gas stove
        Microwave oven and non-portable burners
        Microwave oven only
        Other (fireplace, hotplate, etc.)
    Main cooking facilities outside building:
        (Repeat TYPE OF COOKING FACILITIES)
```

## HBG41. REFRIGERATOR IN BUILDING [3]

## Universe: Housing units

Total:
With a refrigerator
No refrigerator
HBG42. SINK IN BUILDING [3]
Universe: Housing units
Total:
With a sink with piped water
No sink with piped water
HBG43. KITCHEN FACILITIES [3]

```
Universe: Housing units
Total:
    Complete kitchen facilities
    Lacking complete kitchen facilities
```

## HBG44. TENURE BY KITCHEN FACILITIES [7]

Universe: Occupied housing units
Total:
Owner occupied:
Complete kitchen facilities
Lacking complete kitchen facilities
Renter occupied:
(Repeat KITCHEN FACILITIES)

## Telephone Service Availability, Battery Operated Radio, and Air Conditioning

## HBG45. TENURE BY TELEPHONE SERVICE AVAILABLE [7]

Universe: Occupied housing units
Total:
Owner occupied:
With telephone service available
No telephone service available
Renter occupied: (Repeat TELEPHONE SERVICE AVAILABLE)

## HBG46. TENURE BY BATTERY-OPERATED RADIO [7]

Universe: Occupied housing units
Total:
Owner occupied:
With 1 or more battery-operated radios
No battery-operated radio
Renter occupied:
(Repeat BATTERY-OPERATED RADIO)

## HBG47. AIR CONDITIONING [5]

Universe: Housing units
Total:
Central system
1 individual room unit
2 or more individual room units
No air conditioning

## Condominium Status

## HBG48. CONDOMINIUM STATUS BY VACANCY STATUS [11]

Universe: Vacant housing units
Total:
Condominium:
For rent
For sale only
For seasonal, recreational, or occasional use
All other vacants
Not condominium:
(Repeat VACANCY STATUS)

## HBG49. CONDOMINIUM STATUS BY TENURE AND MORTGAGE STATUS [11]

Universe: Occupied housing units
Total:
Condominium:
Owner occupied:
With a mortgage
Not mortgaged
Renter occupied
Not condominium:
(Repeat TENURE AND MORTGAGE STATUS)

## Water, Sewage, and Rent (Contract)

## HBG50. SOURCE OF WATER [6]

Universe: Housing units
Total:
Public system only
Public system and catchment
Individual well
Catchment, tanks, or drums only
Some other source (standpipe, spring, river, creek, etc.)

## HBG51. SEWAGE DISPOSAL [4]

Universe: Housing units
Total:
Public sewer
Septic tank or cesspool
Other means

## HBG52. CONTRACT RENT [15]

Universe: Renter-occupied housing units
Total:
With cash rent:
Less than \$100
\$100 to \$199
\$200 to \$299
\$300 to \$399
\$400 to \$499
\$500 to \$599
\$600 to \$699
\$700 to \$799
$\$ 800$ to $\$ 899$
\$900 to \$999
\$1,000 to \$1,999
$\$ 2,000$ or more
No cash rent

## HBG53. LOWER CONTRACT RENT QUARTILE (DOLLARS) [1]

Universe: Renter-occupied housing units paying cash rent
Lower contract rent quartile

## HBG54. MEDIAN CONTRACT RENT (DOLLARS) [1]

Universe: Renter-occupied housing units paying cash rent
Median contract rent

## HBG55. UPPER CONTRACT RENT QUARTILE (DOLLARS) [1]

Universe: Renter-occupied housing units paying cash rent Upper contract rent quartile

## HBG56. AGGREGATE CONTRACT RENT (DOLLARS) [1]

Universe: Renter-occupied housing units paying cash rent Aggregate contract rent

## Gross Rent

## HBG57. GROSS RENT [15]

Universe: Renter-occupied housing units
Total:
With cash rent:
Less than \$100
\$100 to \$199
\$200 to \$299
\$300 to \$399
\$400 to \$499
\$500 to \$599
\$600 to \$699
$\$ 700$ to $\$ 799$
$\$ 800$ to $\$ 899$
\$900 to \$999
\$1,000 to \$1,999
$\$ 2,000$ or more
No cash rent

## HBG58. MEDIAN GROSS RENT (DOLLARS) [1]

Universe: Renter-occupied housing units paying cash rent Median gross rent

## HBG59. AGGREGATE GROSS RENT (DOLLARS) [1]

Universe: Renter-occupied housing units paying cash rent Aggregate gross rent

## HBG60. RENT ASKED [13]

Universe: Vacant-for-rent housing units
Total:
Less than \$100
\$100 to \$199
\$200 to \$299
\$300 to \$399
$\$ 400$ to $\$ 499$
$\$ 500$ to \$599
\$600 to \$699
\$700 to \$799
\$800 to \$899
\$900 to \$999
\$1,000 to \$1,999
$\$ 2,000$ or more

## HBG61. GROSS RENT AS A PERCENTAGE OF HOUSEHOLD INCOME IN 1999 [11]

Universe: Renter-occupied housing units
Total:
Less than 10.0 percent
10.0 to 14.9 percent
15.0 to 19.9 percent
20.0 to 24.9 percent
25.0 to 29.9 percent
30.0 to 34.9 percent
35.0 to 39.9 percent
40.0 to 49.9 percent
50.0 percent or more

Not computed
HBG62. MEDIAN GROSS RENT AS A PERCENTAGE OF HOUSEHOLD INCOME IN 1999 [1]
Universe: Renter-occupied housing units paying cash rent
Median gross rent as a percentage of household income in 1999

## HBG63. AGE OF HOUSEHOLDER BY GROSS RENT AS A PERCENTAGE OF HOUSEHOLD INCOME IN 1999 [15]

Universe: Renter-occupied housing units
Total:
Householder 15 to 64 years:
Less than 20.0 percent
20.0 to 24.9 percent
25.0 to 29.9 percent
30.0 to 34.9 percent
35.0 percent or more

Not computed
Householder 65 years and over:
(Repeat GROSS RENT AS A PERCENTAGE OF HOUSEHOLD INCOME IN 1999)
HBG64. HOUSEHOLD INCOME IN 1999 BY GROSS RENT AS A PERCENTAGE OF HOUSEHOLD INCOME IN 1999 [15]

```
Universe: Renter-occupied housing units
Total:
    Less than $50,000:
        Less than 20.0 percent
        20.0 to 24.9 percent
        25.0 to 29.9 percent
        3 0 . 0 ~ t o ~ 3 4 . 9 ~ p e r c e n t

    $50,000 or more:
        (Repeat GROSS RENT AS A PERCENTAGE OF HOUSEHOLD INCOME IN 1999)
```

```
Value, Mortgage Status, and Selected Monthly Owner Costs
HBG65. VALUE FOR SPECIFIED OWNER-OCCUPIED HOUSING UNITS [15]
Universe: Specified owner-occupied housing units
Total:
    Less than $30,000
    $30,000 to $39,999
    $40,000 to $49,999
    $50,000 to $59,999
    $60,000 to $69,999
    $70,000 to $79,999
    $80,000 to $89,999
    $90,000 to $99,999
    $100,000 to $124,999
    $125,000 to $149,999
    $150,000 to $174,999
    $175,000 to $199,999
    $200,000 to $249,999
    $250,000 or more
```

HBG66. LOWER VALUE QUARTILE (DOLLARS) FOR SPECIFIED OWNER-OCCUPIED
HOUSING UNITS [1]

Universe: Specified owner-occupied housing units
Lower value quartile

## HBG67. MEDIAN VALUE (DOLLARS) FOR SPECIFIED OWNER-OCCUPIED HOUSING UNITS

 [1]Universe: Specified owner-occupied housing units
Median value

## HBG68. UPPER VALUE QUARTILE (DOLLARS) FOR SPECIFIED OWNER-OCCUPIED HOUSING UNITS [1]

Universe: Specified owner-occupied housing units
Upper value quartile

## HBG69. MORTGAGE STATUS [8]

Universe: Specified owner-occupied housing units
Total:
Housing units with a mortgage, contract to purchase, or similar debt: With either a second mortgage or home equity loan, but not both:

Second mortgage only
Home equity loan only
Both second mortgage and home equity loan
No second mortgage and no home equity loan
Housing units without a mortgage
HBG70. AGGREGATE VALUE (DOLLARS) FOR SPECIFIED OWNER-OCCUPIED HOUSING UNITS BY MORTGAGE STATUS [3]

Universe: Specified owner-occupied housing units
Aggregate value:
Housing units with a mortgage
Housing units without a mortgage

## HBG71. VALUE FOR ALL OWNER-OCCUPIED HOUSING UNITS [15]

```
Universe: Owner-occupied housing units
Total:
    Less than $30,000
    $30,000 to $39,999
    $40,000 to $49,999
    $50,000 to $59,999
    $60,000 to $69,999
    $70,000 to $79,999
    $80,000 to $89,999
    $90,000 to $99,999
    $100,000 to $124,999
    $125,000 to $149,999
    $150,000 to $174,999
    $175,000 to $199,999
    $200,000 to $249,999
    $250,000 or more
```

## HBG72. PRICE ASKED [15]

```
Universe: Specified vacant-for-sale-only housing units
Total:
Less than \$30,000
\$30,000 to \$39,999
\$40,000 to \$49,999

## IDENTIFICATION SECTION

| Field name | Data dictionary <br> reference name | Field <br> size | Starting <br> position | Data <br> type |
| :---: | ---: | ---: | ---: | ---: |

NOTE: The filling of codes and data attributes in the files is specific to summary level; not all fields are filled for every summary level. Where a code or attribute is specified, the actual value is assigned to the field except for the use of three special codes:

Assignment of codes of nine (9) indicates a balance record or that the entity or attribute does not exist for this record.
Assignment of pound signs (\#) indicates that more than one value exists for this field and, thus, no specific value can be assigned.
Assignment of exclamation marks (!) indicates that this value has not yet been determined for this file.

## Geographic Area Codes-Con.

FIPS County Subdivision Class Code ${ }^{7}$ COUSUBCC 242 A/N
C2 Incorporated place that also serves as a minor civil division (MCD) equivalent because, although the place is coextensive with an MCD, the Census Bureau, in agreement with state officials, does not recognize that MCD for presenting statistical data since the MCD cannot provide governmental services (lowa and Ohio only).

C5 Incorporated place that also serves as a minor civil division (MCD) equivalent because it is not part of any MCD or a county subdivision classified as Z 5 .

C7 Incorporated place that is an independent city; that is, it also serves as a county equivalent because it is not part of any county, and a minor civil division (MCD) equivalent because it is not part of any MCD.

T1 Governmentally active minor civil division (MCD) that is not coextensive with an incorporated place.

T5 Governmentally active minor civil division (MCD) that is coextensive with an incorporated place.

T9 Minor civil division (MCD) whose government is inactive.
Z1 Minor civil division (MCD) that cannot provide general-purpose governmental services.
Z2 American Indian reservation and/or off-reservation trust land area that also serves as a primary division of a county or statistically equivalent area.

Z3 Unorganized territory identified by the Census Bureau as a minor civil division (MCD) equivalent for presenting statistical data.

Z5 Census county division (CCD), census subarea (Alaska only), or census subdistrict (U.S. Virgin Islands only).

Z7 Incorporated place that the Census Bureau treats as a minor civil division (MCD) equivalent because it is not in any MCD or is coextensive with a legally established but nonfunctioning MCD that the Census Bureau does not recognize for statistical data presentation purposes, AND is located in a state or county whose MCDs cannot provide governmental services (lowa, Louisiana, Nebraska, and North Carolina only).

Z9 Pseudo-minor civil division (MCD) that consists of water area not assigned to any legal MCD.

C1 Incorporated place that is governmentally active, is not related to an Alaska Native village statistical area (ANVSA), and does not serve as a minor civil division (MCD) equivalent.

C2 Incorporated place that also serves as a minor civil division (MCD) equivalent because, although the place is coextensive with an MCD, the Census Bureau, in agreement with state officials, does not recognize that MCD for presenting statistical data since the MCD cannot provide governmental services (Iowa and Ohio only).

C5 Incorporated place that also serves as a minor civil division (MCD) equivalent because it is not part of any MCD or a county subdivision classified as Z5.

C6 Incorporated place that coincides with or approximates an Alaska Native village statistical area (ANVSA).

C7 Incorporated place that is an independent city; that is, it also serves as a county equivalent because it is not part of any county, and a minor civil division (MCD) equivalent because it is not part of any MCD.

C8 The portion ("balance") of a consolidated city that excludes the separately incorporated place(s) within that jurisdiction.

C9 Incorporated place whose government is operationally inactive or is not included in any other "C" subclass.

M2 Military or U.S. Coast Guard installation (or part of an installation) that serves as a census designated place (CDP).

U1 Census designated place (CDP) with a name that is commonly recognized for the populated area and designated as a populated space by the U.S. Geological Survey (USGS).

U2 Census designated place (CDP) with a name that is not commonly recognized for the populated area (e.g., a combination of the names of two or three commonly recognized communities, or a name that identifies the location of the CDP in relation to an adjacent incorporated place).

U9 Census designated place (CDP) that coincides with or approximates an Alaska Native village statistical area (ANVSA).

Note: Place class code is set at both the place-county level and for the whole place and could vary if a place is in multiple counties. The place class code describes the portion of the place within a county in all summary levels except: 160, 372, 375, 382, 391, 460, 461, and 531; for those excepted summary levels, the place description describes the entire place entity. The different place class codes only can occur in Iowa, Nebraska, and Ohio.

## Geographic Area Codes-Con.

Place Description Code PLACEDC 1 53 A/N
0 Legal entity has no area classified as a central place of an urban area or central city of a metropolitan area (MA).

1 Legal entity has all of its area classified as a central place of an urban area and as a central city of a metropolitan area (MA).

2 Legal entity has part of its area classified as a central place of an urban area and all of its area classified as a central city of a metropolitan area (MA).

3 Legal entity has no area classified as a central place of an urban area and all of its area classified as a central city of a metropolitan area (MA).

4 Legal entity has all of its area classified as a central place of an urban area and part of its area classified as a central city of a metropolitan area (MA).

5 Legal entity has part of its area classified as a central place of an urban area and part of its area classified as a central city of a metropolitan area (MA).

6 Legal entity has no area classified as a central place of an urban area and part of its area classified as a central city of a metropolitan area (MA).

7 Legal entity has all of its area classified as a central place of an urban area and no area classified as a central city of a metropolitan area (MA).

8 Legal entity has part of its area classified as a central place of an urban area and no area classified as a central city of a metropolitan area (MA).

9 Entity is a "false" entity and not applicable for a place description.
A Statistical entity has no area classified as a central place of an urban area or central city of a metropolitan area (MA).

B Statistical entity has all of its area classified as a central place of an urban area and as central city of a metropolitan area (MA).

C Statistical entity has part of its area classified as a central place of an urban area and all of its area classified as a central city of a metropolitan area (MA).

D Statistical entity has no area classified as a central place of an urban area and all of its area classified as a central city of a metropolitan area (MA).

E Statistical entity has all of its area classified as a central place of an urban area and part of its area classified as a central city of a metropolitan area (MA).

F Statistical entity has part of its area classified as a central place of an urban area and part of its area classified as a central city of a metropolitan area (MA).

G Statistical entity has no area classified as a central place of an urban area and part of its area classified as a central city of a metropolitan area (MA).

H Statistical entity has all of its area classified as a central place of an urban area and no area classified as a central city of a metropolitan area (MA).

I Statistical entity has part of its area classified as a central place of an urban area and no area classified as a central city of a metropolitan area (MA).

## Geographic Area Codes-Con.

Note: Place description code is set at both the place-country level and for the whole place and could vary if a place is in multiple counties. The place description code describes the portion of the place within a county in all summary levels except: 160, 372, 375, 382, 391, 460, 461, and 531 ; for those excepted summary levels, the place description describes the entire place entity.

The place description code for a central place(s) of an urban area refers only to land area, and does not take into account any water area. For example, if the entire land area of a place is classified as urban within an urban area, the entire area of a place is classified as a central place regardless of any water area being classified as rural outside the urban area.

01-53 The actual congressional district number
00 Applies to states whose representative is elected "at large"; i.e., the state has only one representative in the United States House of Representatives
98 Applies to areas that have an "at large" nonvoting delegate or resident commissioner in the United States House of Representatives
99 Applies to areas that have no representation in the United States House of Representatives

Area Characteristics-Con.
Functional Status Code FUNCSTAT $1 \quad 291$ A/N

A Active government providing primary general-purpose functions.
B Active government that is partially consolidated with another government but with separate officials providing primary general-purpose functions.
C Active government that is consolidated with another government that has the same officials providing primary general-purpose functions. Functional status $C$ is assigned to the nonprimary entity.
E Active government providing special-purpose functions.
F Fictitious entity created to fill the Census Bureau's geographic hierarchy that is coextensive or nearly so with another governmental unit.
G Active government that is fiscally or administratively subordinate to another unit of government that provides primary general-purpose functions; not classified as a government by the Census Bureau's Governments Division.
I Inactive governmental unit that has the power to provide primary general-purpose functions.
N Nonfunctioning legal entity.
$S$ Statistical entity.
T State recognized American Indian tribe.

## FOOTNOTE SECTION

1. A unique, six-character identifier for each file series. The file identification code is "SFIA."

See How to Use This File for further information.
2. Identifies the geographic level for which the data matrices on the summary file have been summarized. The summary level sequence chart describes the hierarchical arrangement of the specified geographic areas with other geographic areas, if any. The summary level must be used in combination with the geographic area codes to identify a specific geographic area (for example, summary level 050 and a specific county code must be used together to locate the data for a particular county). See How to Use This File for further information.
3. Indicates an iteration (repetition), for the specified summary level, of the data matrices on the summary file for the geographic components listed in the Geographic Component field. See How to Use This File for further information.

## Geographic Component Codes

00 Not a geographic component
01 Urban
04 Urban-in urbanized area
28 Urban-in urban cluster
29 Urban-in urban cluster of 25,000 to 49,999 population
30 Urban-in urban cluster of 10,000 to 24,999 population
31 Urban-in urban cluster of 5,000 to 9,999 population
32 Urban-in urban cluster of 2,500 to 4,999 population
43 Rural
44 Rural-place
45 Rural-place of 2,500 or more population
46 Rural-place of 1,000 to 2,499 population
47 Rural-place of less than 1,000 population
48 Rural-not in place
4. Indicates an iteration (repetition), for the specified summary level, of the data matrices on the summary file for a population or housing characteristic. These iteration fields apply to SF 2 and SF 4 only.
5. The logical record is the complete record for a geographic entity defined by the summary level, but exclusive of the characteristic iteration. A logical record may have one or more parts (or segments). Each logical record has an assigned sequential integer number within the file. See How to Use This File for further information.
6. See Appendix A, Census 2000 Geographic Terms and Concepts, for definition of this field.

## FOOTNOTE SECTION-Con.

7. Federal Information Processing Standards (FIPS) codes are standards and guidelines that are issued by National Institute of Standards and Technology (NIST) for use in computer systems within the federal government. There are several standards used in Census 2000 data presentation. The Census Bureau maintains the following standards:

FIPS 5, Codes for the Identification of the States, the District of Columbia, and the Outly ing Areas of the United States, and Associated Areas FIPS 6, Counties and Equivalent Entities of the United States, Its Possessions, and Associ ated Areas
FIPS 9, Congressional Districts of the United States
The Office of Management and Budget (OMB) maintains:
FIPS 8, Metropolitan Areas (Including MSAs, CMSAs, PMSAs, and NECMAs)
The United States Geological Survey (USGS) maintains:
FIPS 55, Guideline: Codes for Named Populated Places, Primary County Divisions, and Other Locational Entities of the United States, Puerto Rico, and the Outlying Areas
General information about FIPS and the actual FIPS codes as well as contact information can be found on the Internet at:
http://geonames.usgs.gov/fips55.html
A detailed documentation for the FIPS 55 can be found at:
http://www.itl.nist.gov/fipspubs/fip55-3.htm
8. Codes in unspecified arrangement for U.S. Census Bureau use.
9. For summary levels 256, 257, 258, 259, 289, 291, 292, 293, and 294, the Census Bureau only creates records for federally recognized American Indian reservation and/or off-reservation trust land entities, as appropriate for the summary level. No records are created for state reservations, statistical American Indian and Alaska Native areas, and Hawaiian home lands.
10. Federal Information Processing Standards (FIPS) 55 codes are assigned by state. Because American Indian areas can exist in more than one state, multiple FIPS 55 codes exist for the entity. In National products, American Indian areas in multiple states will show a FIPS 55 code of \#\#\#\#\# indicating that multiple FIPS codes exist for this entity.
11. State legislative district codes can have one to three characters including special characters of dashes, slashes, and periods. If the code contains less than three characters, the field is right-justified with leading blanks.
12. Voting district codes can have one to six characters including special characters of dashes, slashes, and periods. If the code contains less than six characters, the field is right-justified with leading blanks
13. Land area measurement in square meters. The accuracy of the area measurement is limited by the inaccuracy inherent in the mapping of the various boundary features in the TIGER ${ }^{\circledR}$ file. Land area includes intermittent water and glaciers, which appear on census maps and in the TIGER file as hydrographic features. Square miles can be derived by dividing square meters by $2,589,988$. See Appendix A, Census 2000 Geographic Terms and Concepts, for definition of this field if it is applicable to this file.
14. Water area measurement in square meters. The accuracy of the area measurement is limited by the inaccuracy inherent in the mapping of the various boundary features in the TIGER File. Water area excludes intermittent water and glaciers, which are treated as land even though they appear on census maps and in the TIGER File as hydrographic features. Square miles can be derived by dividing square meters by $2,589,988$. See Appendix A, Census 2000 Geographic Terms and Concepts, for definition of this field if it is applicable to this file.

## FOOTNOTE SECTION-Con.

15. Name of the lowest-level entity represented by the summary level. In addition to the name of the entity, the name field contains the legal/statistical area description (LSAD) when appropriate, and sometimes contains the state abbreviation. For legal entities, the name is the one reported to the U.S. Census Bureau in the Boundary and Annexation Survey or by other appropriate sources. For statistical entities, the name is determined by the Office of Management and Budget for metropolitan areas. For other areas, the name is determined by the local officials, usually in cooperation with the U.S. Census Bureau.

When the summary level represents only part of the area specified in the name, the name usually will have "(pt.)" appended to the name/code terminology to designate that this entry for the entity represents only a part of the total entity.
16. The total number of persons enumerated in the specified summary level as determined in the 100-percent processing.
17. The total number of housing units enumerated in the specified summary level as determined in the 100 -percent processing.
18. Latitude in degrees, to six decimal places, of a point within the geographic area represented by the summary level. The decimal point is implied on the file. The character immediately preceding the first digit of the latitude of an internal point identifies the direction (hemisphere): a plus sign (+) indicates the Northern Hemisphere; a minus sign (-) indicates the Southern Hemisphere. See Appendix A, Census 2000 Geographic Terms and Concepts, for definition of this field if it is applicable to this file.
19. Longitude in degrees, to six decimal places, of a point with the geographic area represented by the summary level. The decimal point is implied on the file. The character immediately preceding the first digit of the longitude of an internal point identifies the direction (hemisphere): a plus sign (+) indicates the Eastern Hemisphere; a minus sign (-) indicates the Western Hemisphere. A point on the 180th meridian is assigned to the Western Hemisphere (-180000000). See Appendix A, Census 2000 Geographic Terms and Concepts, for definition of this field if it is applicable to this file.
20. Legal/Statistical Area Description Codes

00 (none)-nation; no description is appended to the name of the entity.
01 (none)—state or state equivalent; no description is appended to the name of the entity.
03 City and Borough-Legal county equivalent in Alaska; "City and Borough" is appended to the name of the entity.
04 Borough-Legal county equivalent in Alaska; "Borough" is appended to the name of the entity.
05 Census area-Statistical county equivalent in Alaska; "Census Area" is appended to the name of the entity.
06 County—Legal county in 48 states; "County" is appended to the name of the entity.
07 District-Legal county equivalent in American Samoa; "District" is appended to the name of the entity.
08 Independent city-legal county equivalent in Maryland, Missouri, and Virginia; "city" is appended to the name of the entity.
09 (none)-Independent city that is a legal county equivalent in Nevada; no description is appended to the name of the entity.
10 Island—Legal county equivalent in the Virgin Islands (U.S.); "Island" is appended to the name of the entity.
11 (none)-Legal county equivalent in American Samoa; "Island" is part of the name and is not appended to the name of the entity.
12 Municipality-Legal county equivalent in Alaska and the Northern Mariana Islands; "Municipality" is appended to the name of the entity.
13 Municipio-Legal county equivalent in Puerto Rico; "Municipio" is appended to the name of the entity.
14 (none)—Legal county equivalent, used at county level for District of Columbia and Guam; no description is appended to the name of the entity.

## FOOTNOTE SECTION-Con.

Legal/Statistical Area Description Codes-Con.
15 Parish—Legal county equivalent in Louisiana; "Parish" is appended to the name of the entity.
19 Reservation—Legal county subdivision equivalent in Maine and New York (coextensive with all or part of an American Indian reservation); "Reservation" is appended to the name of the entity.
20 Barrio-Legal county subdivision in Puerto Rico; "barrio" is appended to the name of the entity.
21 Borough—legal county subdivision in New York; legal county subdivision equivalent in New Jersey and Pennsylvania; "borough" is appended to the name of the entity.
22 CCD-Census country divisions are statistical area county subdivision equivalents in 21 states; "CCD" is appended to the name of the entity.
23 Census subarea-Statistical area county subdivision equivalent in Alaska; "census subarea" is appended to the name of the entity.
24 Census subdistrict-legal county subdivision equivalent in the Virgin Islands (U.S.); "subdistrict" is appended to the name of the entity.
25 City-Legal county subdivision equivalent in 20 states and the District of Columbia; "city" is appended to the name of the entity.
26 County-Legal county subdivision in American Samoa; "county" is appended to the name of the entity.
27 District-Legal county subdivision in Pennsylvania, Virginia, West Virginia, Guam, and the Northern Mariana Islands; "district" is appended to the name of the entity. The description may refer to an election, magisterial, municipal, or road district.
28 (none)-Legal county subdivision in Louisiana, Maryland, Mississippi, Virginia, West Virginia, and the Northern Mariana Islands; "District" is part of the name and is not appended to the name of the entity. The description may refer to an assessment, election, magisterial, supervisor's, parish governing authority, or municipal district.
29 Precinct-Legal county subdivision in Illinois and Nebraska; "precinct" is appended to the name of the entity. The description refers to an election precinct.
30 (none)-Legal county subdivision in Illinois and Nebraska. "Precinct" is part of the name and is not appended to the name of the entity. The description refers to an election precinct.
31 Gore-Legal county subdivision in Maine and Vermont; "gore" is appended to the name of the entity.
32 Grant-Legal county subdivision in New Hampshire and Vermont; "grant" is appended to the name of the entity.
33 Independent city-Legal county subdivision equivalent in Maryland, Missouri, and Virginia; "city" is appended to the name of the entity.
34 (none)-Independent city that is a legal county subdivision equivalent in Nevada. "City" is part of the name and is not appended to the name of the entity.
35 (none)-Legal county subdivision in American Samoa; "Island" is part of the name and is not appended to the name of the entity.
36 Location-Legal county subdivision in New Hampshire; "location" is appended to the name of the entity.
38 (none)-Legal county subdivision equivalent for Arlington County, Virginia; no description is appended to the name of the entity.
39 Plantation-Legal country subdivision in Maine; "plantation" is appended to the name of the entity.
40 (none)-Legal county subdivision not defined; no description is appended to the name of the entity.
41 Barrio-pueblo-Legal county subdivision in Puerto Rico; "barrio-pueblo" is appended to the name of the entity.
42 Purchase-Legal county subdivision in New Hampshire; "purchase" is appended to the name of the entity.
43 Town-Legal county subdivision in eight states, legal county subdivision equivalent in New Jersey, North Carolina, Pennsylvania, and South Dakota. The description "town" is appended to the name of the entity.
44 Township-Legal county subdivision in 16 states; "township" is appended to the name of the entity.
45 (none)-Legal county subdivision in Kansas, Minnesota, Nebraska, and North Carolina; "Township" is part of the name and is not appended to the name of the entity.

## FOOTNOTE SECTION-Con.

Legal/Statistical Area Description Codes-Con.
46 Unorganized territory-statistical area county subdivision in ten states; "UT" is appended to the name of the entity.
47 Village—Legal county subdivision equivalent in New Jersey, Ohio, South Dakota, and Wisconsin; "village" is appended to the name of the entity.
49 Charter township-Legal county subdivision in Michigan; "charter township" is appended to the name of the entity.
51 Subbarrio-Sub-MCD in Puerto Rico; "subbarrio" is appended to the name of the entity.
53 City and Borough-Incorporated place in Alaska; "city and borough" is appended to the name of the entity.
54 Municipality-Incorporated place in Alaska; "municipality" is appended to the name of the entity.
55 Comunidad-statistical area place in Puerto Rico; "comunidad" is appended to the name of the entity.
56 Borough-Incorporated place in Connecticut, New Jersey, and Pennsylvania; "borough" is appended to the name of the entity.
57 CDP-Census designated places (CDPs) are statistical area places in all 50 states, Guam, Northern Mariana Islands, and the Virgin Islands (U.S.); "CDP" is appended to the name of the entity.
58 City—Incorporated place in 49 states (not Hawaii) and the District of Columbia; "city" is appended to the name of the entity.
59 (none)-Incorporated place having no legal description in three states; place equivalent in five states. Some places have a unique description, no description, or description included with the name, as follows:

```
Athens-Clarke County (balance) (Georgia): "Unified Government of Athens-Clarke County"
Augusta-Richmond County (balance) (Georgia): (no description appended)
Anaconda-Deer Lodge County (Montana): incorporated municipality
Butte-Silver Bow (balance) (Montana): (no description appended)
Carson City, Nevada: (no description appended)
Columbus city (balance) (Georgia)
Indianapolis city (balance) (Indiana): (no description appended)
Lexington-Fayette (Kentucky): Urban County Government
Nashville and Davidson County (balance) (Tennessee): "Metropolitan Government of Nashville and Davidson County"
```

60 Town-Incorporated place in 30 states and the Virgin Islands (U.S.); "town" is appended to the name of the entity.

61 Village-Incorporated place in 20 states and traditional place in American Samoa; "village" is appended to the name of the entity.
62 Zona urbana-Statistical area place in Puerto Rico; "zona urbana" is appended to the name of the entity.
65 City-Consolidated city in Connecticut, Georgia, and Indiana; "city" is appended to the name of the entity.
66 (none)-Some consolidated cities have unique descriptions or no descriptions, as follows:

Athens-Clarke County (Georgia): "Unified Government of Athens-Clarke County" Augusta-Richmond County (Georgia): (no description appended)
Butte-Silver Bow (Montana): (no description appended)
Nashville-Davidson (Tennessee): "Metropolitan Government of Nashville and Davidson County"
Region-Census region; "Region" is appended to the name of the entity.
69 Division-Census division; "Division" is appended to the name of the entity.
70 Urban growth area (UGA)-Only in Oregon; "urban growth area" is appended to the name of the entity.
71 CMSA-Consolidated metropolitan statistical area; "CMSA" is appended to the name of the entity.
72 MSA-Metropolitan statistical area; "MSA" is appended to the name of the entity.
73 PMSA-Primary metropolitan statistical area; "PMSA" is appended to the name of the entity.
74 NECMA-New England county metropolitan area; "NECMA" is appended to the name of the entity.
75 Urbanized area (UA); "Urbanized Area" is appended to the name of the entity.

## FOOTNOTE SECTION-Con.

Legal/Statistical Area Description Codes-Con.
76 Urban cluster (UC); "Urban Cluster" is appended to the name of the entity.
77 Alaska Native Regional Corporation (ANRC); "Alaska Native Regional Corporation" is appended to the name of the entity.
78 Hawaiian home land; "Home Land" is appended to the name of the entity.
79 Alaska Native village statistical area (ANVSA); "ANVSA" is appended to the name of the entity.
80 Tribal designated statistical area (TDSA); "TDSA" is appended to the name of the entity.
81 Colony-American Indian reservation; "Colony" is appended to the name of the entity.
82 Community-American Indian reservation; "Community" is appended to the name of the entity.
83 Joint use area-American Indian reservation equivalent; "joint use area" is appended to the name of the entity.
84 Pueblo-American Indian reservation; "Pueblo" is appended to the name of the entity.
85 Rancheria-American Indian reservation; "Rancheria" is appended to the name of the entity.
86 Reservation-American Indian reservation; "Reservation" is appended to the name of the entity.
87 Reserve-American Indian reservation; "Reserve" is appended to the name of the entity.
88 Oklahoma tribal statistical area (OTSA); "OTSA" is appended to the name of the entity.
89 Trust land only entity-American Indian reservation equivalent; "Trust Land" is appended to the name of the entity.
90 Joint use area OTSA-Joint use area of Oklahoma tribal statistical area (OTSA); "joint use OTSA" is appended to the name of the entity.
91 Ranch-American Indian reservation; "Ranch" is appended to the name of the entity.
92 State designated American Indian statistical area (SDAISA); "SDAISA" is appended to the name of the entity.
93 Indian village—American Indian reservation; "Indian Village" is appended to the name of the entity.
94 Village-American Indian reservation; "Village" is appended to the name of the entity.
95 Indian community-American Indian reservation; "Indian Community" is appended to the name of the entity.
T1 (none)-American Indian tribal subdivision; "Area" is part of the name and is not appended to the name of the entity.
T2 Chapter—American Indian tribal subdivision; "Chapter" is appended to the name of the entity.
T3 Community—American Indian tribal subdivision; "Community" is appended to the name of the entity.
T4 District—American Indian tribal subdivision; "District" is appended to the name of the entity.
T5 (none)-American Indian tribal subdivision; "District" is part of the name and is not appended to the name of the entity.
T6 Segment-American Indian tribal subdivision; "Segment" is appended to the name of the entity.
T7 Tract—American Indian tribal subdivision; "Tract" is appended to the name of the entity.
T8 Agency—American Indian tribal subdivision; "Agency" is appended to the name of the entity.
T9 Parcel—American Indian tribal subdivision; "Parcel" is appended to the name of the entity.
T0 Precinct—American Indian tribal subdivision; "Precinct" is appended to the name of the entity.
U1 Region-American Indian tribal subdivision; "Region" is appended to the name of the entity.
U2 Township—American Indian tribal subdivision; "Township" is appended to the name of the entity.
U3 Village—American Indian tribal subdivision; "Village" is appended to the name of the entity.
C1 Congressional district; "Congressional District (at Large)" is appended to the name of the entity.
C2 Congressional district; "Congressional District" is appended to the name of the entity.

## FOOTNOTE SECTION-Con.

Legal/Statistical Area Description Codes-Con.
C3 Congressional district; "Resident Commissioner District (at Large)" is appended to the name of the entity.
C4 Congressional district; "Delegate District (at Large)" is appended to the name of the entity.
C5 Congressional district; "No Representative" is appended to the name of the entity.
LL State legislative district—lower chamber; "State House District" is prefixed to the name of the entity. No legislative districts exist in the following states/state equivalents: Arkansas, California, District of Columbia, Florida, Hawaii, Kentucky, Maine, Maryland, Minnesota, Montana, Nebraska, New Hampshire, Puerto Rico, Texas, and the Island Areas.
LU State legislative district-upper chamber; "State Senate District" is prefixed to the name of the entity. No legislative districts exist in the following states/state equivalents: Arkansas, California, District of Columbia, Florida, Hawaii, Kentucky, Maine, Maryland, Minnesota, Montana, Puerto Rico, Texas, and the Island Areas.
V0 (none)—Descriptions, such as "Precinct" and "Voting District," are part of the name and are not prefixed or appended to the name of the entity. No 2000 voting districts exist in the following states/state equivalents: California, Florida, Kentucky, Montana, North Dakota, Ohio, Oregon, Wisconsin, and the Island Areas.
V1 Voting district; "Voting District" is prefixed to the name of the entity. No 2000 voting districts exist in the following states/state equivalents: California, Florida, Kentucky, Montana, North Dakota, Ohio, Oregon, Wisconsin and the Island Areas.
V2 Voting district; "Voting District" is appended to the name of the entity. No 2000 voting districts exist in the following states/state equivalents: California, Florida, Kentucky, Montana, North Dakota, Ohio, Oregon, Wisconsin, and the Island Areas.
P1 (none)-1\% public-use microdata file; no description is appended to the name of the entity.
P5 (none)-5\% public-use microdata file; no description is appended to the name of the entity.
PK (none)—Park landmark; no description is appended to the name of the entity.
S1 (none)-Elementary school district; no description is appended to the name of the entity.
S2 (none)-Secondary school district; no description is appended to the name of the entity.
S3 (none)—Unitary school district; no description is appended to the name of the entity.
S4 (none)-Administrative school area in Hawaii and New York city only; no description is appended to the name of the entity.
S5 (none)—Bureau of Indian Affairs (BIA) school area; no description is appended to the name of the entity.
S6 (none)—Department of Defense (DOD) school area; no description is appended to the name of the entity.
S7 (none)-Areas not coded to a school district; no description is appended to the name of the entity.
TZ (none)-Traffic analysis zone; no description is appended to the name of the entity.
Z3 ZIP Code ${ }^{\circledR}$ tabulation area (3-Digit); "3-Digit ZCTA" is appended to the name of the entity.
Z5 ZIP Code ${ }^{\circledR}$ tabulation area (5-Digit); " 5 -Digit ZCTA" is appended to the name of the entity. Five-Digit ZCTAs may include codes ending in "XX" and "HH."

## TABLE (MATRIX) SECTION

The files for the Guam Summary File are provided as a set. The set is comprised of the geographic header file and 31 data files. The layout for the 31 data files is presented below.

These 31 table files are comma delimited. The data fields are numeric with the maximum size shown in Max size. Each file begins with five linking fields from the geographic header file. These fields are shown at the beginning of each data file in this table (matrix) section.

| Table |  | Data |  |  |
| :--- | ---: | ---: | ---: | ---: |
| number | Table contents | dictionary <br> reference | Seg- | Max. <br> size |

File 01 - File Linking Fields (comma delimited)

## Chapter 8. <br> Accuracy of the Data

## CONFIDENTIALITY OF THE DATA

The Census Bureau has modified or suppressed some data in this data release to protect confidentiality. Title 13, United States Code, Section 9, prohibits the Census Bureau from publishing results in which an individual can be identified. The Census Bureau's internal Disclosure Review Board sets the confidentiality rules for all data releases. A checklist approach is used to ensure that all potential risks to the confidentiality of the data are considered and addressed.

Title 13, United States Code. Title 13 of the United States Code authorizes the Census Bureau to conduct censuses and surveys. Section 9 of the same Title requires that any information collected from the public under the authority of Title 13 be maintained as confidential. Section 214 of Title 13 and Sections 3559 and 3571 of Title 18 of the United States Code provide for the imposition of penalties of up to 5 years in prison and up to $\$ 250,000$ in fines for wrongful disclosure of confidential census information.

Disclosure limitation. Disclosure limitation is the process for protecting the confidentiality of data. A disclosure of data occurs when someone can use published statistical information to identify an individual who provided information under a pledge of confidentiality. Using disclosure limitation procedures, the Census Bureau modifies or removes the characteristics that put confidential information at risk for disclosure. Although it may appear that a table shows information about a specific individual, the Census Bureau has taken steps to disguise the original data while making sure the results are still useful. The techniques used by the Census Bureau to protect confidentiality in tabulations vary depending on the type of data.

Disclosure limitation for the Pacific Island Areas (which include American Samoa, the Commonwealth of the Northern Mariana Islands, and Guam) is conducted in basically the same way for the two types of data that are collected from people and housing units in these areas. In the United States census, certain data (referred to as stateside 100-percent data) are collected from everyone, while some additional data (referred to as stateside sample data) are collected from approximately 1 -in-6 households. As in the 1990 Pacific Island Areas census, the 2000 Pacific Island Areas census asked both basic and detailed questions of all people and housing units. Basic subjects include items such as race/ethnicity, age, sex, and tenure (whether the home is owned or rented) and are equivalent to the stateside 100-percent component subjects. Detailed subjects in the 2000 Pacific Island Areas census include items like income, occupation, disability, and housing costs. The detailed subjects are equivalent to the stateside sample component subjects.

Data swapping. Data swapping is a method of disclosure limitation designed to protect confidentiality in tables of frequency data (the number or percentage of the population with certain characteristics). Data swapping is done by editing the source data or exchanging records for a sample of cases when creating a table. A sample of households is selected and matched on a set of selected key variables with households in neighboring geographic areas that have similar characteristics (such as the same number of adults and the same number of children). Because the swap often occurs within a neighboring area, there is little or no effect on the marginal totals for the area or for totals that include data from multiple areas. Because of data swapping, users should not assume that tables with cells having a value of 1 or 2 reveal information about specific individuals. Data swapping procedures were first used in the 1990 census and were also used for Census 2000.

## EDITING OF UNACCEPTABLE DATA

The objective of the processing operations is to produce a set of data that describe the population as clearly and accurately as possible. To meet this objective, crew leaders review and edit questionnaires for consistency, completeness, and acceptability during field data collection operations. Census clerks in the local census offices also review questionnaires for omissions, certain inconsistencies, and population coverage. For example, write-in entries such as "Don't know" or "NA" are considered unacceptable in certain quantities and/or in conjunction with other data omissions. As a result of this review operation, missing information was collected through a telephone or personal visit followup.

Subsequent to field operations, imputation procedures assign acceptable values to remaining incomplete or inconsistent data records. Allocations, or computer assignments of acceptable data in place of unacceptable entries or blanks, are needed when an entry for a given item is lacking or when the information reported for a person (or housing unit) on that item is inconsistent with other information for that same person (or housing unit). Assigning acceptable codes in place of blanks or unacceptable entries enhances the usefulness of the data. Substitutions, which assign a full set of characteristics for a person or housing unit, are not performed in the 2000 Pacific Island Areas census. This contrasts with the 1990 Pacific Island Areas census that incorporated substitutions.

## SOURCES OF ERROR

In any large-scale statistical operation such as the 2000 decennial census, human and processing errors occur. These errors are commonly referred to as nonsampling errors. Such errors include: not enumerating every household or every person in the population, failing to obtain all required information from the respondents, obtaining incorrect or inconsistent information, and recording information incorrectly. In addition, errors can occur during the field review of the enumerators' work, during clerical handling of the census questionnaires, or during the electronic processing of the questionnaires.

While it is impossible to completely eliminate nonsampling error from an operation as large and complex as the decennial census, the Census Bureau attempts to control the sources of such error during the planning, data collection, and data processing operations. Several 2000 Pacific Island Areas census initiatives focus on improving data quality. These programs were developed based on experience from the 1990 decennial census and results from the 2000 United States decennial census testing cycle.

A quality assurance program was designed to improve coverage. Coverage improvement initiatives include telephone and personal visit followups. For the Field Followup Operation, census workers visit housing units that are classified as "vacant." Field Followup also includes housing units for which the questionnaire failed the clerical edit and for which there was no telephone contact. Census workers also visit addresses for which the questionnaire could not be located in the local census office.

Computer and clerical edits improve the quality and consistency of the data. The objective of the Clerical Merge Operation is: 1) to ensure that, after the edit and coding operations, an address register exists for each assignment area, and 2) each listing on the address register is associated with a questionnaire (and any continuation forms for households with more than 5 members). Also, the number of people in the address register is cross-checked against information on the questionnaire for consistency.

One of the primary goals of Census 2000 is to make it simpler for people to be counted. Be Counted forms were available in public places for use by people or households who believed they were not included in the census. Providing these response options made it easier for people to be counted but may have increased the possibility that more than one response was submitted for a given person or household. The objective of the Unduplication Operation was to resolve situations where more than one form was received from a particular housing unit.

Finally, there was a Local Government Review of Census Addresses Operation. During this operation, the Pacific Island Area governments reviewed the completeness and accuracy of their Census 2000 counts. Local governments appointed reviewers who were familiar with local geography and development patterns. Reviewers who identified potential problems at the block level reviewed census maps and the address listing pages. Since local census offices were still open at the time of this review, census enumerators could investigate locally reported problems and make corrections as needed.

## Chapter 9. User Updates

User updates supply data users with additional or corrected information that becomes available after the technical documentation or files are prepared. They are issued in a numbered series and are available in portable document format (PDF) on our Web site at http://www.census.gov.

If you print the documentation, please file the user updates cover sheet behind this notice. If there are technical documentation replacement pages, they should be filed in their proper location and the original pages destroyed.

## Guam Summary File Data Note 1

In the Guam Demographic Profile, median incomes below $\$ 1,000$ were calculated in a manner different from that which was used in the Guam Summary File. The demographic profile calculated the median based on a single interval of less than $\$ 2,500$. The summary file calculated the median based on two intervals of less than $\$ 1,000$ and $\$ 1,000$ to $\$ 2,499$. As a result, there may be differences between the median incomes listed in the demographic profile and the median incomes listed in the summary file.

## Guam Summary File Data Note 2

The Guam Demographic Profile data concerning grandparents who are living with grandchildren may be slightly different from the data in the Guam Summary File. The data in the profiles are for the total population while the summary file data are restricted to persons in households similar to other summary file products.

## Guam Summary File Data Note 3

The Guam Demographic Profile data for median value differ from the Guam Summary File data for median value. The summary file data were rounded to the nearest $\$ 100$. The demographic profile data were not rounded. The summary file data are not incorrect, these data simply reflect the effects of rounding.

## Guam Summary File Data Note 4

In the Guam Demographic Profile under "Poverty Status in 1999," the total number of unrelated individuals 15 years and over who are below the poverty level was incorrect. The data should include (1) all individuals in family households who are not related to the reference person; (2) all individuals who live in nonfamily households, including householders living alone or with nonrelatives only; and (3) all individuals in noninstitutional group quarters. However, the data shown exclude householders in nonfamily households. The correct data are available from the Guam Summary File.

## Guam Summary File Data Note 5

On the Census 2000 Guam questionnaire, respondents could report more than one type of disability. Several tables in the Guam summary file have as their universe the total disabilities tallied. Each line of the table represents the number of occurrences of a particular disability, and the numbers should be interpreted with care. For example, in table PCT336, Total Disabilities Tallied by Age by Type of Disability for the Civilian Noninstitutionalized Population 5 Years and Over With Disabilities. In this table, the second line of data, "Total disabilities tallied for people 5 to 15 years," does not refer to the number of people 5 to 15 years of age, or to the number of people 5 to 15 years of age who have a disability. Rather, it is the sum of the number of all disabilities reported among the population age 5 to 15 years. Lines in the table referencing specific disabilities are more easily interpreted. For example, the third line of data, "Sensory disability," refers to the number of sensory disabilities reported among people age 5 to 15 years (or the number of people 5 to 15 years of age who have a sensory disability).

Data users wanting to know the percent of civilian noninstitutionalized people 5 to 15 years of age with, for example, a sensory disability should divide line 3 from Table PCT36 with the sum of lines 3 and 27 from table PCT37, Sex by Age by Disability Status by Employment Status for the Civilian Noninstitutionalized Population 5 Years and Over.

## Guam Summary File Data Note 6

In the Guam Summary File, data for matrices PCT18, PCT19, and PCT80 concerning grandparents who are living with grandchildren are restricted to persons in households similar to other summary file products. These numbers may be slightly different from the profile tables which are for the total population.

## Guam Summary File Data Note 7

The values shown in the Guam Summary File for SEWAGE DISPOSAL may differ slightly from those found in the Guam Demographic Profile. The summary file allows a "Sewer/Septic" response even if the source of water for a housing unit is located outside the building and provides only cold water. In the demographic profile, housing units with a source of water that was located outside the building and provided only cold water were assigned to the "Other means" category of SEWAGE DISPOSAL.

## Guam Summary File Data Note 8

In the Guam Summary File, table PCT75 data for "Nonfamily householders," nonfamily householders "Not living alone," and "Other unrelated individuals" have been corrected. Some respondents who were tallied as nonfamily householders "Not living alone" are now correctly tallied as "Other unrelated individuals." In American FactFinder and on the FTP site, these data have been replaced.

## Guam Summary File Data Note 9

There is an error in the way the imputation flag for citizenship was set in Table PBG92. This error led to an understatement of the number of people for whom citizenship was imputed. People who had their place of birth (i.e., country of birth) imputed as the United States, Puerto Rico, Guam, the U.S. Virgin Islands, or the Northern Marianas should also have had their citizenship flag set to imputed. However, this did not occur. This error will be corrected in future releases of the ACS data files.

## Guam Summary File Technical Documentation Note 1

In the Guam Summary File, the universe for table PBG15, Main Reason for Moving to Guam, changed from "Persons born outside Guam" to "Population born outside Guam."

# Guam Summary File Technical Documentation Note 2 

In the Guam Summary File, "excluding" was changed to "except" in table PBG42, line "Other services (excluding public administration)."

## Guam Summary File Technical Documentation Note 3

In the Guam summary file, the original release did not include the correct data for the last three lines of table PCT32 for summary levels 160 (State-Place) and 155 (State-Place-County). The data shown in the last three lines of table PCT32 should have appeared in the first three lines of table PCT33. As a result, all of the data in tables PCT33 thru PCT37 were off by three cells. The file was corrected and reissued in American FactFinder and on the Census FTP site on January 24, 2003.

## Guam Summary File Technical Documentation Note 4

In the Guam Summary File, the reference to PCT45 in the Data Dictionary (Chapter 7 in the technical documentation) was corrected. The file segment for cells 1 through 171 of PCT45 was changed from segment 16 to segment 15 . The file segment for cells 172 through 341 of PCT45 remains segment 16 .

## Guam Summary File Technical Documentation Note 5

In the Guam Summary File, the lines entitled "In married-couple families" of Table PCT71, Poverty Status in 1999 by Age by Household Type, were changed to "In married-couple family households;" the lines entitled "In other families" were changed to "In other family households;" and the lines entitled "Unrelated individuals" were changed to "In nonfamily households and group quarters."

## Guam Summary File Technical Documentation Note 6

The Language section of the Code List appendix had a spelling error. It has been corrected to read as follows:

772 Tahitian

## Guam Summary File Technical Documentation Note 7

The following was inadvertently left off of the Acknowledgments section:
Data collection and associated field operations were carried out by the government of each area through a special agreement between the Census Bureau and the following Governors: Honorable Tauese P. F. Sunia, the late Governor of American Samoa, assisted by Ali'imau H. Scanlan, Jr., Census Area Manager, and Vaito'elau Filiga, Assistant Census Area Manager; Honorable Pedro P. Tenorio, former Governor of the Commonwealth of the Northern Mariana Islands, assisted by Sohale Samarai, Census Area Manager; Honorable Carl T.C. Gutierrez, former Governor of Guam, assisted by Ed Bitanga, Census Area Manager; and Honorable Charles W. Turnbull, Governor of the United States Virgin Islands, assisted by Dr. Frank L. Mills, Census Area Manager.

## INTRODUCTION-GEOGRAPHIC PRESENTATION OF DATA

In decennial census data products, geographic entities usually are presented in an hierarchical arrangement or as an inventory listing.

## Hierarchical Presentation

An hierarchical geographic presentation shows the geographic entities in a superior/subordinate structure. This structure is derived from the legal, administrative, or areal relationships of the entities. The hierarchical structure is depicted in report tables by means of indentation, and is explained for computer-readable media in the geographic coverage portion of the abstract in the technical documentation. An example of hierarchical presentation for the Pacific Island Areas is the "standard census geographic hierarchy": census block, within block group, within census tract, within place, within minor civil division, within first-order subdivision, within each Pacific Island Area. Graphically, this is shown as:

Pacific Island Area
First-order subdivision
Minor civil division
Place (or part)
Census tract (or part)
Block group (or part)
Census block

## Inventory Presentation

An inventory presentation of geographic entities is one in which all entities of the same type are shown in alphabetical, code, or geographic sequence, without reference to their hierarchical relationships. Generally, an inventory presentation shows totals for entities that may be split in a hierarchical presentation, such as place, census tract, or block group. An example of a series of inventory presentations is: Pacific Island Area, followed by all of its first-order subdivisions, followed by all the places. Graphically, this is shown as:

```
Pacific Island Area
Subdivision A
Subdivision B
Subdivision C
Place X
Place Y
Place Z
```

## AREA MEASUREMENT

Area measurement data provide the size, in square units (metric and nonmetric) of geographic entities for which the U.S. Census Bureau tabulates and disseminates data. Area is calculated from the specific boundary recorded for each entity in the Census Bureau's geographic database (see TIGER ${ }^{\circledR}$ database). These area measurements are recorded as whole square meters. (To convert square meters to square kilometers, divide by $1,000,000$; to convert square kilometers to square miles, divide by 2.589988 ; to convert square meters to square miles, divide by $2,589,988$.)

The U.S. Census Bureau provides area measurement data for both land area and total water area. The water area figures for the Pacific Island Areas include inland, coastal, and territorial water. (For the 1990 census, the Census Bureau provided area measurements for land and total water; water area for the inland, coastal, and territorial water classifications was available in the Geographic Identification Code Scheme product only.) "Inland water" consists of any lake, reservoir, pond, or similar body of water that is recorded in the Census Bureau's geographic database. It also includes any river, creek, canal, stream, or similar feature that is recorded in that database as a two-dimensional feature (rather than as a single line). The portions of the oceans and related large embayments that belong to the United States and its territories are classified as "coastal" and "territorial" waters. Rivers and bays that empty into these bodies of water are treated as "inland water" from the point beyond which they are narrower than one nautical mile across. Identification of land and inland, coastal, and territorial waters is for data presentation purposes only, and does not necessarily reflect their legal definitions.

Land and water area measurements may disagree with the information displayed on U.S. Census Bureau maps and in the TIGER ${ }^{\circledR}$ database because, for area measurement purposes, features identified as "intermittent water" and "glacier" are reported as land area. For this reason, it may not be possible to derive the land area for an entity by summing the land area of its component census blocks. In addition, the water area measurement reported for some geographic entities includes water that is not included in any lower-level geographic entity. Therefore, because water is contained only in a higher-level geographic entity, summing the water measurements for all the component lower-level geographic entities will not yield the water area of that higher-level entity. This occurs, for example, where water is associated with a first-order subdivision but is not within the legal boundary of any minor civil division. Crews-of-vessels entities (see CENSUS TRACT and CENSUS BLOCK) do not encompass territory and therefore have no area measurements.

The accuracy of any area measurement data is limited by the accuracy inherent in (1) the location and shape of the various boundary information in the TIGER ${ }^{\circledR}$ database, (2) the location and shapes of the shorelines of water bodies in that database, and (3) rounding affecting the last digit in all operations that compute and/or sum the area measurements.

## BLOCK GROUP (BG)

A block group (BG) consists of all census blocks having the same first digit of their four-digit identifying numbers within a census tract. For example, block group 3 ( BG 3 ) within a census tract includes all blocks numbered from 3000 to 3999. BGs generally contain between 600 and 3,000 people, with an optimum size of 1,500 people. BGs on special places must contain a minimum of 300 people. (Special places include correctional institutions, military installations, college campuses, workers' dormitories, hospitals, nursing homes, and group homes.)

Most BGs were delineated by local participants as part of the U.S. Census Bureau's Participant Statistical Areas Program. The Census Bureau delineated BGs only where a local, state, or tribal government declined to participate or where the Census Bureau could not identify a potential local or tribal participant.

BGs never cross the boundaries of states (or statistically equivalent entities), and first-order subdivisions. BGs never cross the boundaries of census tracts, but may cross the boundary of any other geographic entity required as a census block boundary (see CENSUS BLOCK).

In decennial census data tabulations, a BG may be split to present data for every unique combination of minor civil division, place, or other tabulation entity shown in the data products. For example, if BG 3 is partly in a place and partly outside the place, there are separate tabulated
records for each portion of BG 3. BGs are used in tabulating data nationwide, as was done for the 1990 census, and for all block-numbered areas in the 1980 census. For data presentation purposes, BGs are a substitute for the enumeration districts (EDs) used for reporting data in the Pacific Island Areas for censuses before 1990. Also, BGs are the lowest level of the geographic hierarchy for which the U.S. Census Bureau tabulates and presents sample data.

## BOUNDARY CHANGES

Many of the legal and statistical entities for which the U.S. Census Bureau tabulates decennial census data have had boundary changes between the 1990 census and Census 2000; that is, between January 2, 1990 and January 1, 2000. Boundary changes to legal entities result from:

1. Annexations to or detachments from legally established governmental units.
2. Mergers or consolidations of two or more governmental units.
3. Establishment of new governmental units.
4. Disincorporations or disorganizations of existing governmental units.
5. Changes in treaties or executive orders, and governmental action placing additional lands in trust.
6. Decisions by federal, state, and local courts.
7. Redistricting for congressional districts or county subdivisions that represent single-member districts for election to a county governing board.

Statistical entity boundaries generally are reviewed by local, state, or tribal governments and can have changes to adjust boundaries to visible features, to better define the geographic area each encompasses, or to account for shifts and changes in the population distribution within an area.

The historical counts shown for the first-order subdivisions, minor civil divisions, and places of the Pacific Island Areas are not updated for such changes, and thus reflect the population and housing units in each entity as delineated at the time of each decennial census. Boundary changes are not reported for some entities, such as census designated places and block groups.

Changes to the boundaries for census tracts and, for the first time, for census blocks are available in relationship files, which are only available in computer-readable form. The census tract relationship files feature the relationship of census tracts/block numbering areas at the time of the 1990 census to census tracts for Census 2000, and vice versa, including partial relationships. For the first time, the census tract relationship files show a measure of the magnitude of change using the proportion of the length of roads and sides of roads contained in partial census tracts. This information can be used to proportion the data for the areas where census tracts have changed.

The census block relationship files, which are available only in computer-readable form, present relationships of the 1990 census and Census 2000 blocks on the basis of whole blocks or part blocks ("P"). The following relationships can be derived:

|  | 1990 census block | 2000 census block |
| :---: | :---: | :---: |
| One to one | 601 | 1017 |
| One to many | 101 P | 3028 |
|  | 101 P | 2834 |
| Many to one. | 410 | 2554 P |
|  | 503 | 2554 P |
| Many to many | 404 | 1007 P |
|  | 501 P | 1007 P |
|  | 502 P | 1008 P |

Block relationship files are available to compare the following sets of census blocks:
1990 tabulation block to 2000 collection block
2000 collection block to 2000 tabulation block
1990 tabulation block to 2000 tabulation block
Census tract relationship files and block relationship files are not geographic equivalency files. For a true areal comparison between the census tracts/block numbering areas and blocks used for the 1990 census and the census tracts and blocks used for Census 2000 (as well as other geographic areas), it is necessary to use the 2000 TIGER/Line ${ }^{\circledR}$ files. The 2000 TIGER/Line ${ }^{\circledR}$ files will contain 1990 and 2000 boundaries for first-order subdivisions, minor civil divisions, places, census tracts, census blocks, and by derivation from the census blocks, block groups.

## CENSUS BLOCK

Census blocks are areas bounded on all sides by visible features, such as streets, roads, streams, and railroad tracks, and by invisible boundaries, such as city, town, township, and county limits, property lines, and short, imaginary extensions of streets and roads. Generally, census blocks are small in area; for example, a block bounded by city streets. However, census blocks in sparsely settled areas may contain many square miles of territory.

All territory in the United States, Puerto Rico, and the Island Areas has been assigned block numbers, as was the case for the 1990 census. To improve operational efficiency and geographic identifications, the U.S. Census Bureau has introduced different numbering systems for tabulation blocks used in decennial census data products, and for collection blocks, used in administering the census. (In 1990, there generally was a single numbering system.) Collection block numbers are available only in the TIGER/Line ${ }^{\circledR}$ data products; the Census Bureau does not tabulate data for collection blocks.

Many tabulation blocks, used in decennial census data products, represent the same geographic area as the collection blocks used in the Census 2000 enumeration process. Where the collection blocks include territory in two or more geographic entities, each unique piece required for data tabulation is identified as a separate tabulation block with a separate block number. It is possible for two or more collection blocks to be combined into a single tabulation block. This situation can occur when a visible feature established as a collection block boundary is deleted during the field update operation. Tabulation blocks do not cross the boundaries of any entity for which the U.S. Census Bureau tabulates data, including census tracts, first-order subdivisions, minor civil divisions, places, and urban and rural areas. Tabulation blocks also generally do not cross the boundaries of certain landmarks, including military installations, national parks, and national monuments.

Tabulation blocks are identified uniquely within census tract by means of a four-digit number. (The 1990 census block numbers had three digits, with a potential alphabetic suffix.) The Census 2000 collection blocks are numbered uniquely within first-order subdivision and consist of four or five digits. For its Census 2000 data tabulations, the U.S. Census Bureau created a unique set of census block numbers immediately before beginning the tabulation process. These are the census block numbers seen in the data presentations. For the 1990 census, the Census Bureau created a separate block with a suffix of "Z" to identify crews-of-vessels population. For Census 2000, crews-of-vessels population is assigned to the land block identified by the Census Bureau as associated with the homeport of the vessel.

The U.S. Census Bureau introduced a different method for identifying the water areas of census blocks. For the 1990 census, water was not uniquely identified within a census block; instead, all water area internal to a block group was given a single block number ending in "99" (for example, in block group 1, all water was identified as block 199). A suffix was added to each water block number where the block existed in more than one tabulation entity within its block group. For Census 2000, water area located completely within the boundary of a single land tabulation block has the same block number as that land block. Water area that touches more than one land block is assigned a unique block number not associated with any adjacent land block. The water block numbers begin with the block group number followed by " 999 " and proceed in descending order
(for example, in block group 3, the numbers assigned to water areas that border multiple land blocks are 3999, 3998, etc.). In some block groups, the numbering of land blocks might use enough of the available numbers to reach beyond the 900 range within the block group. For this reason, and because some land blocks include water (ponds and small lakes), no conclusions about whether a block is all land or all water can be made by looking at the block number. The land/water flag, set at the polygon level in the TIGER ${ }^{\circledR}$ database and shown in TIGER/Line ${ }^{\circledR}$ and statistical data tabulation files, is the only way to know if a block is all water when viewing the computer files. On maps, water areas are shown with a screen symbol.

## CENSUS REGION AND CENSUS DIVISION

For statistical purposes, the United States is divided into four census regions, which are further subdivided into nine census divisions. The Pacific Island Areas are not assigned to any region or division.

## CENSUS TRACT

Census tracts are small, relatively permanent statistical subdivisions of a county or statistically equivalent entity delineated by local participants as part of the U.S. Census Bureau's Participant Statistical Areas Program. The Census Bureau delineated census tracts where no local participant existed or where a local or tribal government declined to participate. The primary purpose of census tracts is to provide a stable set of geographic units for the presentation of decennial census data. This is the first decennial census for which the entire United States and its territories are covered by census tracts. For the 1990 census, some areas had census tracts and others, such as the Pacific Island Areas, had block numbering areas (BNAs). For Census 2000, all BNAs were replaced by census tracts, which may or may not represent the same areas

Census tracts in the United States, Puerto Rico, and the Virgin Islands of the United States generally have between 1,500 and 8,000 people, with an optimum size of 4,000 people. For the Pacific Island Areas, the optimum size is 2,500 people. First-order subdivisions with fewer than 1,500 people have a single census tract. Census tracts that comprise special places must contain a minimum of 1,000 people. (Special places include correctional institutions, military installations, college campuses, workers' dormitories, hospitals, nursing homes, and group homes.) When first delineated, census tracts are designed to be relatively homogeneous with respect to population characteristics, economic status, and living conditions. The spatial size of census tracts varies widely depending on the density of settlement. Census tract boundaries are delineated with the intention of being maintained over many decades so that statistical comparisons can be made from decennial census to decennial census. However, physical changes in street patterns caused by highway construction, new developments, and so forth, may require occasional boundary revisions. In addition, census tracts occasionally are split due to population growth or combined as a result of substantial population decline.

Census tracts are identified by a four-digit basic number and may have a two-digit numeric suffix; for example, 6059.02. The decimal point separating the four-digit basic tract number from the two-digit suffix is shown in the printed reports and on census maps. In computer-readable files, the decimal point is implied. Many census tracts do not have a suffix; in such cases, the suffix field is either left blank or is zero-filled. Leading zeros in a census tract number (for example, 002502) are shown only in computer-readable files. Census tract suffixes may range from . 01 to .98. For the 1990 census, the .99 suffix was reserved for census tracts/block numbering areas that contained only crews-of-vessels population; for Census 2000, the crews-of-vessels population is included with the related census tract.

Census tract numbers range from 1 to 9999 and are unique within a first-order subdivision. The number 0000 in computer-readable files identifies a census tract delineated to provide complete coverage of water area in territorial seas.

## CONGRESSIONAL DISTRICT (CD)

American Samoa, Guam, the Virgin Islands of the United States, and the District of Columbia are represented in the U.S. House of Representatives by a delegate, who may not vote on the floor of the House of Representatives, but may vote on legislation as it is considered by committees to
which they have been named. In computer-readable data products that display a congressional district field, the two-digit Federal Information Processing Standards (FIPS) code "98" is used to identify such representational areas. The Northern Mariana Islands does not have representation in Congress. The FIPS code "99" identifies areas with no representation in Congress.

## FIRST-ORDER SUBDIVISION

"First-order subdivisions" are the highest-level legal subdivisions of a state (in the United States) or a statistically equivalent entity. In the United States, this entity usually is called a "county." The entities that serve as first-order subdivisions for census purposes in the Pacific Island Areas are as follows:

- American Samoa: Districts (3) and islands (2)
- Northern Mariana Islands: Municipalities (4).
- Guam: No primary divisions; the entire area is considered equivalent to a first-order subdivision.

Each first-order subdivision is assigned a three-digit Federal Information Processing Standards (FIPS) code that is unique within Pacific Island Area. These codes are assigned in alphabetical order of first-order subdivision within each Pacific Island Area.

## GEOGRAPHIC CODE

Geographic codes are shown primarily in computer-readable data products, such as computer tape and CD-ROM/DVD media, including data tabulations and data tables associated with computer-readable boundary files, but they also are shown on some U.S. Census Bureau maps. Census codes are used only if there is no Federal Information Processing Standards (FIPS) code for the same geographic entity or if the FIPS code is not adequate for data presentation. A code that is not identified as either "census" or "FIPS" is usually a census code for which there is no FIPS equivalent. Entities that use only FIPS codes in Census Bureau products are congressional district, first-order subdivision, minor civil division, place, and state (or statistically equivalent entity).

## Census Code

Census codes are assigned for a variety of geographic entities, including urbanized area and urban cluster. The structure, format, and meaning of census codes used in U.S. Census Bureau data products appear in the appropriate technical documentation.

## Federal Information Processing Standards (FIPS) Code

Federal Information Processing Standards (FIPS) codes are assigned for a variety of geographic entities, including congressional district, first-order subdivision, minor civil division, place, and state (or statistically equivalent entity). The structure, format, and meaning of FIPS codes used in U.S. Census Bureau data products appear in the appropriate technical documentation.

The objective of FIPS codes is to improve the ability to use the data resources of the federal government and avoid unnecessary duplication and incompatibilities in the collection, processing, and dissemination of data. The FIPS codes and FIPS code documentation are available online at http://www.itl.nist.gov/fipspubs/index.htm. Further information about the FIPS 5-2, 6-4, and 9-1 publications (states, counties, and congressional districts, respectively) is available from the Geographic Areas Branch, Geography Division, U.S. Census Bureau, Washington, DC 20233-7400, telephone 301-457-1099. Further information about the FIPS 55-DC3 publication (places, consolidated cities, county subdivisions, and noncensus locational entities) is available from the Geographic Names Office, National Mapping Division, U.S. Geological Survey, 523 National Center, Reston, VA 20192, telephone 703-648-4544.

## United States Postal Service (USPS) Code

United States Postal Service (USPS) codes for states and statistically equivalent entities are used in all decennial census data products. The codes are two-character alphabetic abbreviations. These codes are the same as the Federal Information Processing Standards (FIPS) two-character alphabetic abbreviations.

## INTERNAL POINT

An internal point is a set of geographic coordinates (latitude and longitude) that is located within a specified geographic entity. A single point is identified for each entity; for many entities, this point represents the approximate geographic center of that entity. If the shape of the entity causes this point to be located outside the boundary of the entity or in a water body, it is relocated to land area within the entity. In computer-readable products, internal points are shown to six decimal places; the decimal point is implied.

The first character of the latitude or longitude is a plus (+) or a minus (-) sign. A plus sign in the latitude identifies the point as being in the Northern Hemisphere, while a minus sign identifies a location in the Southern Hemisphere. For longitude, a plus sign identifies the point as being in the Eastern Hemisphere, while a minus sign identifies a location in the Western Hemisphere.

## ISLAND AREAS OF THE UNITED STATES

The Island Areas of the United States are American Samoa, Guam, the Commonwealth of the Northern Mariana Islands (Northern Mariana Islands), and the Virgin Islands of the United States. The U.S. Census Bureau treats the Island Areas as entities that are statistically equivalent to states for data presentation purposes. Geographic definitions specific to the Island Areas are shown in the appropriate publications and documentation that accompany the data products for the Island Areas.

American Samoa, Guam, and the Northern Mariana Islands often are referred to collectively as the "Pacific Island Areas." Sometimes the Island Areas are referred to as "Island Territories" or "Insular Areas." For the 1990 and previous censuses, the U.S. Census Bureau referred to the entities as "Outlying Areas." The term "U.S. Minor Outlying Islands" refers to certain small islands under U.S. jurisdiction in the Caribbean and Pacific: Baker Island, Howland Island, Jarvis Island, Johnston Atoll, Kingman Reef, Midway Islands, Navassa Island, Palmyra Atoll, and Wake Island.

## MINOR CIVIL DIVISION (MCD)

Minor civil divisions (MCDs) are the primary governmental or administrative divisions of a first-order subdivision. In the Pacific Island Areas, the U.S. Census Bureau recognizes the following entities as MCDs:

- American Samoa: Counties within the three districts; the two islands have no legal subdivisions.
- Northern Mariana Islands: Municipal districts.
- Guam: Election districts.

The MCDs in American Samoa serve as general-purpose governments. The MCDs in Guam and the Northern Mariana Islands are geographic subdivisions of the first-order subdivision(s) and are not governmental units.

Each MCD is assigned a five-digit Federal Information Processing Standards (FIPS) code in alphabetical order within each Pacific Island Area.

## PLACE

Places, for the reporting of decennial census data for the Pacific Island Areas, include census designated places and incorporated places. Each place is assigned a five-digit Federal Information Processing Standards (FIPS) code, based on the alphabetical order of the place name within each state or statistically equivalent entity. If place names are duplicated and they represent distinctly different areas, a separate code is assigned to each place name alphabetically by primary first-order subdivision in which each place is located.

## Census Designated Place (CDP)

Census designated places (CDPs) are delineated for each decennial census to provide census data for concentrations of population, housing, and commercial structures that are identifiable by name but are not within an incorporated place. CDP boundaries usually are defined in cooperation
with state, local, and tribal officials. These boundaries, which usually coincide with visible features or the boundary of an adjacent incorporated place or other legal entity boundary, have no legal status, nor do these places have officials elected to serve traditional municipal functions. CDP boundaries may change from one decennial census to the next with changes in the settlement pattern; a CDP with the same name as in an earlier census does not necessarily have the same boundary.
For Census 2000, for the first time, CDPs did not need to meet a minimum population threshold to qualify for tabulation of census data. For the 1990 census and earlier censuses, the U.S. Census Bureau required CDPs to qualify on the basis of various minimum population size criteria.

Beginning with the 1950 census, the U.S. Census Bureau, in cooperation with state and local governments, identified and delineated boundaries and names for CDPs. In the data products issued in conjunction with Census 2000, the name of each such place is followed by "CDP," as was the case for the 1990 and 1980 censuses. In the data products issued in conjunction with the 1950, 1960, and 1970 censuses, these places were identified by "(U)," meaning "unincorporated place."

All places in Guam and the Northern Mariana Islands are CDPs. There are no CDPs in American Samoa; the U.S. Census Bureau treats the traditional villages as statistically equivalent to incorporated places.

## Incorporated Place

Incorporated places recognized in decennial census data products are legally defined entities that represent concentrations of population. The U.S. Census Bureau treats the villages in American Samoa as incorporated places because they have their own officials, who have specific legal powers as authorized in the American Samoa Code. The village boundaries are traditional rather than being specific, legally defined locations. There are no incorporated places in Guam and the Northern Mariana Islands.

## POPULATION OR HOUSING UNIT DENSITY

Population and housing unit density are computed by dividing the total population or number of housing units within a geographic entity (for example, first-order subdivision, minor civil division, place) by the land area of that entity measured in square kilometers or square miles. Density is expressed as both "people (or housing units) per square kilometer" and "people (or housing units) per square mile" of land area.

## PUBLIC USE MICRODATA AREA (PUMA)

A public use microdata area (PUMA) is a decennial census area for which the U.S. Census Bureau provides specially selected extracts of raw data from a small sample of long-form census records that are screened to protect confidentiality. These extracts are referred to as "public use microdata sample (PUMS)" files. Since 1960, data users have been using these files to create their own statistical tabulations and data summaries.

For Census 2000, state, District of Columbia, and Puerto Rico participants, following U.S. Census Bureau criteria, delineated two types of PUMAs within their states. PUMAs of one type comprise areas that contain at least 100,000 people. The PUMS files for these PUMAs contain a 5 -percent sample of the long-form records. The other type of PUMAs, super-PUMAs, comprise areas of at least 400,000 people. The sample size is 1 percent for the PUMS files for super-PUMAs. The larger 1 -percent PUMAs are aggregations of the smaller 5-percent PUMAs.
For Guam, the U.S. Census Bureau established a single PUMA consisting of a 10 -percent sample file. American Samoa and the Northern Mariana Islands do not have PUMAs.

## STATE (OR STATISTICALLY EQUIVALENT ENTITY)

States are the primary governmental divisions of the United States. The District of Columbia is treated as a statistical equivalent of a state for data presentation purposes. For Census 2000, the U.S. Census Bureau also treats a number of entities that are not legal divisions of the United States as statistically equivalent to a state: American Samoa, the Commonwealth of the Northern Mariana Islands, Guam, Puerto Rico, and the Virgin Islands of the United States.

Each state and statistically equivalent entity is assigned a two-digit numeric Federal Information Processing Standards (FIPS) code in alphabetical order by state name, followed in alphabetical order by Puerto Rico and the Island Areas. Each state and statistically equivalent entity also is assigned a two-letter FIPS/U.S. Postal Service code and a two-digit census code.

## TIGER® DATABASE

TIGER $^{\circledR}$ is an acronym for the Topologically Integrated Geographic Encoding and Referencing system or database. It is a digital (computer-readable) geographic database that automates the mapping and related geographic activities required to support the U.S. Census Bureau's census and survey programs. The Census Bureau developed the TIGER ${ }^{\circledR}$ System to automate the geographic support processes needed to meet the major geographic needs of the 1990 census: producing the cartographic products to support data collection and map presentations, providing the geographic structure for tabulation and dissemination of the collected statistical data, assigning residential and employer addresses to the correct geographic location and relating those locations to the geographic entities used for data tabulation, and so forth. The content of the TIGER ${ }^{\circledR}$ database is undergoing continuous updates, and is made available to the public through a variety of TIGER/Line ${ }^{\circledR}$ files that may be obtained free of charge from the Internet or packaged on CD-ROM or DVD from Customer Services, U.S. Census Bureau, Washington, DC 20233-1900; telephone 301-457-4100; Internet http://www.census.gov/geo/www/tiger.

## UNITED STATES

The United States consists of the 50 states and the District of Columbia.

## URBAN AND RURAL

The U.S. Census Bureau classifies as urban all territory, population, and housing units located within urbanized areas (UAs) and urban clusters (UCs). It delineates UA and UC boundaries to encompass densely settled territory, which generally consists of:

- A cluster of one or more block groups or census blocks each of which has a population density of at least 1,000 people per square mile at the time, and
- Surrounding block groups and census blocks each of which has a population density of at least 500 people per square mile at the time, and
- Less densely settled blocks that form enclaves or indentations, or are used to connect discontiguous areas with qualifying densities.

Rural consists of all territory, population, and housing units located outside of UAs and UCs.
Geographic entities such as first-order subdivisions, minor civil divisions, and places often contain both urban and rural territory, population, and housing units.

The urban and rural classification applies to the 50 states, the District of Columbia, Puerto Rico, American Samoa, Guam, the Northern Mariana Islands, and the Virgin Islands of the United States. There are UCs in all the Pacific Island Areas, but only the Northern Mariana Islands has a UA (Saipan).

## Urbanized Area (UA)

An urbanized area (UA) consists of densely settled territory that contains 50,000 or more people, except in Guam (see below). The U.S. Census Bureau delineates UAs to provide a better separation of urban and rural territory, population, and housing in the vicinity of large places

## Urban Cluster (UC)

An urban cluster (UC) consists of densely settled territory that has at least 2,500 people but fewer than 50,000 people, except in Guam. By agreement with the Government of Guam, the U.S. Census Bureau recognizes Hagåtña as a UC rather than an urbanized area.

The U.S. Census Bureau introduced the UC for Census 2000 to provide a more consistent and accurate measure of the population concentration in and around places. UCs are defined using the same criteria that are used to define UAs. UCs replace the provision in the 1990 and previous censuses that defined as urban only those places with 2,500 or more people located outside of urbanized areas.

## Urban Area Title

The title of each urbanized area (UA) and urban cluster (UC) may contain up to three incorporated place names, and will include the two-letter U.S. Postal Service abbreviation for each state into which the UA extends. However, if the UA or UC does not contain an incorporated place, the urban area title will include the single name of a census designated place, minor civil division, or populated place recognized by the U.S. Geological Survey's Geographic Names Information System.

Each UA and UC is assigned a five-digit numeric code, based on a national alphabetical sequence of all urban area names. A separate flag is included in data tabulation files to differentiate between UAs and UCs. In printed reports, the differentiation between UAs and UCs is included in the name.

## Urban Area Central Place

A central place functions as the dominant center of an urban area. The U.S. Census Bureau identifies one or more central places for each urbanized area (UA) or urban cluster (UC) that contains a place. Any incorporated place or census designated place (CDP) that is in the title of the urban area is a central place of that UA or UC. In addition, other incorporated places and CDPs that have an urban population of 50,000 , or an urban population of at least 2,500 people and at least $2 / 3$ the population of the largest place within the urban area, also are central places.

## Extended Place

As a result of the urbanized area (UA) and urban cluster (UC) delineations, an incorporated place or census designated place may be partially within and partially outside of a UA or UC. Any place that is split by a UA or UC is referred to as an extended place.
Documentation of the UA, UC, and extended place criteria is available from the Geographic Areas Branch, Geography Division, U.S. Census Bureau, Washington, DC 20233-7400; telephone 301-457-1099.

## POPULATION CHARACTERISTICS

Contact list: To obtain additional information on these and other Census 2000 subjects, see the list of Census 2000 Contacts on the Internet at http://www.census.gov/contacts/www/ c-census2000.html.

## AGE

The data on age were derived from answers to questionnaire Item 4. The age classification is based on the age of the person in complete years as of April 1, 2000. The age of the person usually was derived from their date of birth information. Their reported age was used only when date of birth information was unavailable.

Data on age are used to determine the applicability of some of the sample questions for a person and to classify other characteristics in census tabulations. Age data are needed to interpret most social and economic characteristics used to plan and examine many programs and policies. Therefore, age is tabulated by single years of age and by many different groupings, such as 5-year age groups.

Median age. Median age divides the age distribution into two equal parts: one-half of the cases falling below the median age and one-half above the median. Median age is computed on the basis of a single year of age standard distribution (see the "Standard Distributions" section under "Derived Measures"). Median age is rounded to the nearest tenth. (For more information on medians, see "Derived Measures.")

Limitation of the data. The most general limitation for many decades has been the tendency of people to overreport ages or years of birth that end in zero or 5 . This phenomenon is called "age heaping." In addition, the counts in the 1970 and 1980 censuses for people 100 years old and over were substantially overstated. So also were the counts of people 69 years old in 1970 and 79 years old in 1980. Improvements have been made since then in the questionnaire design and in the imputation procedures that have minimized these problems.

Review of detailed 1990 census information indicated that respondents tended to provide their age as of the date of completion of the questionnaire, not their age as of April 1, 1990. One reason this happened was that respondents were not specifically instructed to provide their age as of April 1, 1990. Another reason was that data collection efforts continued well past the census date. In addition, there may have been a tendency for respondents to round their age up if they were close to having a birthday. It is likely that approximately 10 percent of people in most age groups were actually 1 year younger. For most single years of age, the misstatements were largelyoffsetting. The problem is most pronounced at age zero because people lost to age 1
probably were not fully offset by the inclusion of babies born after April 1, 1990. Also, there may have been more rounding up to age 1 to avoid reporting age as zero years. (Age in complete months was not collected for infants under age 1.)

The reporting of age 1 year older than true age on April 1, 1990, is likely to have been greater in areas where the census data were collected later in calendar year 1990. The magnitude of this problem was much less in the 1960, 1970, and 1980 censuses where age was typically derived from respondent data on year of birth and quarter of birth.

These shortcomings were minimized in Census 2000 because age was usually calculated from exact date of birth and because respondents were specifically asked to provide their age as of April 1, 2000. (For more information on the design of the age question, see the section below that discusses "Comparability.")

Comparability. Age data have been collected in every census. For the first time since 1950, the 1990 data were not available by quarter year of age. This change was made so that coded information could be obtained for both age and year of birth. In 2000, each individual has both an age and an exact date of birth. In each census since 1940, the age of a person was assigned when it was not reported. In censuses before 1940, people of unknown age were shown as a separate category. Since 1960, assignment of unknown age has been performed by a general procedure described as "imputation." The specific procedures for imputing age have been different in each census. (For more information on imputation, see "Accuracy of the Data.")

## CITIZENSHIP STATUS

The data on citizenship were derived from answers to questionnaire Item 11. On the Pacific Island Areas questionnaires, respondents were asked to select one of six categories: (1) born in the Area, (2) born in the United States or another U.S. territory or commonwealth, (3) born elsewhere of U.S. parent or parents, (4) a U.S. citizen by naturalization, (5) not a U.S. citizen or national (permanent resident), and (6) not a U.S. citizen or national (temporary resident).

Persons born in American Samoa are U.S. nationals.
Citizen. This category includes respondents who indicated that they were born in the United States, Puerto Rico, a U.S. Island Area (such as Guam), or elsewhere of a U.S. parent or parents. People who indicated that they were U.S. citizens through naturalization are also citizens.

Not a citizen. This category includes respondents who indicated that they were not U.S. citizens, but who indicated that they were either temporary or permanent residents of the Island Area.

Native. The native population includes people born in the United States, Puerto Rico, or the U.S. Island Areas (such as the Commonwealth of the Northern Mariana Islands). People who were born in a foreign country but have at least one U.S. parent also are included in this category. The native population includes anyone who was a U.S. citizen at birth.

Foreign born. The foreign-born population includes all people who were not U.S. citizens at birth. Foreign-born people are those who indicated they were either a U.S. citizen by naturalization or they were not a citizen of the United States, such as respondents who indicated that they were either temporary or permanent residents of a U.S. Island Area.

Census 2000 does not ask about immigration status. The population surveyed includes all people who indicated that the Pacific Island Areas was their usual place of residence on the census date. The foreign-born population includes: immigrants (legal permanent residents), temporary migrants (e.g., students), humanitarian migrants (e.g., refugees), and unauthorized migrants (people illegally residing in a Pacific Island Area).

The foreign-born population is shown by selected area, country, or region of birth. The places of birth shown in data products were chosen based on the number of respondents who reported that area or country of birth. (See "Place of Birth.")

Comparability. The citizenship status questions for the 2000 decennial census and the 1990 decennial census are identical.

## DISABILITY STATUS

The data on disability status were derived from answers to questionnaire Items 17 and 18. Item 17 was a two-part question that asked about the existence of the following long-lasting conditions: (a) blindness, deafness, or a severe vision or hearing impairment (sensory disability) and (b) a condition that substantially limits one or more basic physical activities, such as walking, climbing stairs, reaching, lifting, or carrying (physical disability). Item 17 was asked of the population 5 years old and over.

Item 18 was a four-part question that asked if the individual had a physical, mental, or emotional condition lasting 6 months or more that made it difficult to perform certain activities. The four activity categories were: (a) learning, remembering, or concentrating (mental disability); (b) dressing, bathing, or getting around inside the home (self-care disability); (c) going outside the home alone to shop or visit a doctor's office (going outside the home disability); and (d) working at a job or business (employment disability). Categories 18 a and 18 b were asked of the population 5 years old and over; 18c and 18d were asked of the population 16 years old and over.

For data products that use the items individually, the following terms are used: sensory disability for 17a, physical disability for 17 b , mental disability for 18 a , self-care disability for 18 b , going outside the home disability for 18c, and employment disability for 18d.

For data products that use a disability status indicator, individuals were classified as having a disability if any of the following three conditions were true: (1) they were 5 years old and over and had a response of "yes" to a sensory, physical, mental or self-care disability; (2) they were 16 years old and over and had a response of "yes" to going outside the home disability; or (3) they were 16 to 64 years old and had a response of "yes" to employment disability.

Comparability. The 1990 census data products did not include a general disability status indicator. Furthermore, a comparable indicator could not be constructed since the conceptual framework of the 1990 census was more limited. The questionnaire included only three types of disability in questions with four subparts. The questions asked about whether an individual had a condition that had lasted for 6 months or more and that (1) limited the kind or amount of work that he or she could do at a job, (2) prevented the individual from working at a job, (3) made it difficult to go outside the home alone (for example, to shop or visit a doctor's office), and (4) made it difficult to take care of his or her own personal needs, such as bathing, dressing, or getting around inside the home. The 1990 disability questions were asked of the population 15 years old and over.

## EDUCATIONAL ATTAINMENT

Data on educational attainment, which were derived from answers to questionnaire Item 8 a , was asked of the population 25 years old and over. However, when educational attainment is cross-tabulated by other variables, the universe may change. (For example, when educational attainment is crossed by disability status, the data are tabulated for the civilian noninstitutionalized population 18 to 34 years old.) People are classified according to the highest degree or level of school completed.

The order in which degrees were listed on the questionnaire suggested that doctorate degrees were "higher" than professional school degrees, which were "higher" than master's degrees. The question included instructions for people currently enrolled in school to report the level of the previous grade attended or the highest degree received. Respondents who did not report educational attainment or enrollment level were assigned the attainment of a person of the same age, ethnic origin or race, occupation and sex, where possible, who resided in the same or a nearby area. Respondents who filled more than one box were edited to the highest level or degree reported.

The question included a response category that allowed respondents to report completing the 12 th grade without receiving a high school diploma. It allowed people who received either a high school diploma or the equivalent, for example, passed the Test of General Educational Development (G.E.D.) and did not attend college, to be reported as "high school graduate(s)." The category "Associate degree" included people whose highest degree is an associate degree, which generally requires 2 years of college level work and is either in an occupational program that prepares them for a specific occupation, or an academic program primarily in the arts and sciences. The course work may or may not be transferable to a bachelor's degree. Master's degrees include the traditional MA and MS degrees and field-specific degrees, such as MSW, MEd, MBA, MLS, and MEng. Some examples of professional degrees include medicine, dentistry, chiropractic, optometry, osteopathic medicine, pharmacy, podiatry, veterinary medicine, law, and theology. Vocational and technical training, such as barber school training; business, trade, technical, and vocational schools; or other training for a specific trade, are specifically excluded.

High school graduate or higher. This category includes people whose highest degree was a high school diploma or its equivalent, people who attended college but did not receive a degree, and people who received a college, university, or professional degree. People who reported completing the 12 th grade but not receiving a diploma are not high school graduates.

Not enrolled, not high school graduate. This category includes people of compulsory school attendance age or above who were not enrolled in school and were not high school graduates. These people may be referred to as "high school dropouts." However, there is no criterion regarding when they "dropped out" of school, so they may have never attended high school.

Comparability. Educational attainment questions on years of school completed were included in the censuses of Guam and American Samoa beginning in 1950. In 1940, a single question on years was asked. For the Commonwealth of the Northern Mariana Islands, the questions were first asked in 1970. In 1950, a single question on highest grade of school completed was asked. In the 1960 to 1980 censuses, a two-part question was used to construct highest grade or year of school completed. The question asked (1) the highest grade of school attended and (2) whether that grade was finished. For people who have not attended college, the response categories in the current educational attainment question should produce data that are comparable to data on highest grade completed from earlier censuses. For people who attended college, there is less comparability between years of school completed and highest degree.

Beginning in 1990, the response categories for people who have attended college were modified from earlier censuses because there was some ambiguity in interpreting responses in terms of the number of years of college completed. For instance, it was not clear whether "completed the fourth year of college," "completed the senior year of college," and "college graduate" were synonymous. Research conducted shortly before the 1990 census suggests that these terms were more distinct than in earlier decades, and this change may have threatened the ability to estimate the number of "college graduates" from the number of people reported as having completed the fourth or a higher year of college. It was even more difficult to make inferences about post-baccalaureate degrees and "Associate" degrees from highest year of college completed. Thus, comparisons of post-secondary educational attainment in the 2000 and 1990 censuses with data from the earlier censuses should be made with great caution.

Changes between 1990 and Census 2000 were slight. The two associate degree categories in 1990 were combined into one for Census 2000. "Some college, no degree" was split into two categories, "Some college credit, but less than 1 year," and " 1 or more years of college, no degree." Prior to 1990 , the college levels reported began with "Completed 1 year of college." Beginning in 1990, the first category was "Some college, no degree," which allowed people with less than 1 year of college to be given credit for college. Prior to 1990, they were included in "High school, 4 years." The two revised categories will accommodate comparisons with either data series and allow the tabulation of students who completed at least 1 year of college, as some data users wish. This will not change the total number who completed some college.

The category "12th grade, no diploma" was counted as high school completion or "Completed high school, 4 years" prior to 1990 and as "Less than high school graduate" in 1990 and 2000. In
the 1960 and subsequent censuses, people for whom educational attainment was not reported were assigned the same attainment level as a similar person whose residence was in the same or a nearby area. In the 1940 and 1950 censuses, people for whom educational attainment was not reported were not allocated.

In censuses prior to 1990, "median school years completed" was used as a summary measure of educational attainment. Using the current educational attainment question, the median can only be calculated for groups of which less than half the members have attended college. "Percent high school graduate or higher" and "percent bachelor's degree or higher" are summary measures that can be calculated from the present data and offer quite readily interpretable measures of differences between population subgroups.

## EMPLOYMENT STATUS

The data on employment status (referred to as labor force status in previous censuses), were derived from answers to questionnaire Items 23 and 27 , which were asked of the population 15 years old and over. The series of questions on employment status was designed to identify, in this sequence: (1) people who worked at any time during the reference week; (2) people who did not work during the reference week, but who had jobs or businesses from which they were temporarily absent (excluding people on layoff); (3) people on temporary layoff who expected to be recalled to work within the next 6 months or who had been given a date to return to work, and who were available for work during the reference week; and (4) people who did not work during the reference week, who had looked for work during the reference week or the three previous weeks, and who were available for work during the reference week. (For more information, see "Reference Week.")

The employment status data shown in Census 2000 tabulations relate to people 16 years old and over. In the 1940, 1950, and 1960 censuses, employment status data were presented for people 14 years old and over. The change in the universe was made in 1970 to agree with the official measurement of the labor force as revised in January 1967 by the U.S. Department of Labor. The 1970 census was the last to show employment data for people 14 and 15 years old.

Employed. All civilians 16 years old and over who were either (1) "at work" - those who did any work at all during the reference week as paid employees, worked in their own business or profession, worked on their own farm, or worked 15 hours or more as unpaid workers on a family farm or in a family business; or (2) were "with a job but not at work" - those who did not work during the reference week, but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, industrial dispute, vacation, or other personal reasons. Excluded from the employed are people whose only activity consisted of work around their own house (painting, repairing, or own home housework) or unpaid volunteer work for religious, charitable, and similar organizations. Also excluded are all institutionalized people and people on active duty in the United States Armed Forces.

Civilian employed. This term is defined exactly the same as the term "employed" above.
Unemployed. All civilians 16 years old and over were classified as unemployed if they were neither "at work" nor "with a job but not at work" during the reference week, were looking for work during the last 4 weeks, and were available to start a job. Also included as unemployed were civilians 16 years old and over who: did not work at all during the reference week, were on temporary layoff from a job, had been informed that they would be recalled to work within the next 6 months or had been given a date to return to work, and were available to return to work during the reference week, except for temporary illness. Examples of job seeking activities were:

- Registering at a public or private employment office
- Meeting with prospective employers
- Investigating possibilities for starting a professional practice or opening a business
- Placing or answering advertisements
- Writing letters of application
- Being on a union or professional register

Civilian labor force. Consists of people classified as employed or unemployed in accordance with the criteria described above.

Labor force. All people classified in the civilian labor force (i.e., "employed" and "unemployed" people), plus members of the U.S. Armed Forces (people on active duty with the United States Army, Air Force, Navy, Marine Corps, or Coast Guard).

Not in labor force. All people 16 years old and over who are not classified as members of the labor force. This category consists mainly of students, individuals taking care of home or family, retired workers, seasonal workers enumerated in an off-season who were not looking for work, institutionalized people (all institutionalized people are placed in this category regardless of any work activities they may have done in the reference week), and people doing only incidental unpaid family work (fewer than 15 hours during the reference week).

Subsistence activity. A person is engaged in subsistence activities if he or she mainly produces goods for his or her own or family's use and needs, such as growing/gathering food, fishing, cutting copra for home use, raising livestock, making handicrafts for home use, and other productive activities not primarily for commercial purposes. When subsistence activity categories are shown with the "Employed" and the "Not in labor force" categories of the employment status concept, they relate to activities engaged in during the census reference week. Persons who did subsistence activity only during the reference week are not classified as "employed," unless they were "with a job but not at work." (For more information, see "Employed.")

Worker. The terms "worker" and "work" appear in connection with several subjects: employment status, journey-to-work, class of worker, and work status in 1999. Their meaning varies and, therefore, should be determined by referring to the definition of the subject in which they appear. When used in the concepts "Workers in Family," "Workers in Family in 1999," and "Full-Time, Year-Round Workers," the term "worker" relates to the meaning of work defined for the "Work Status in 1999" subject.

Full-time, year-round workers. See "Work status in 1999."
Limitation of the data. The census may understate the number of employed people because people who have irregular, casual, or unstructured jobs sometimes report themselves as not working. The number of employed people "at work" is probably overstated in the census (and conversely, the number of employed "with a job, but not at work" is understated) since some people who were on vacation or sick leave erroneously reported themselves as working. This problem has no effect on the total number of employed people. The reference week for the employment data is not the same calendar week for all people. Since people can change their employment status from 1 week to another, the lack of a uniform reference week may mean that the employment data do not reflect the reality of the employment situation of any given week. (For more information, see "Reference Week.")

Comparability. The questionnaire items and employment status concepts for Census 2000 are essentially the same as those used in the 1970 to 1990 censuses. However, these concepts differ in many respects from those associated with the 1950 and 1960 censuses. Since employment data from the census are obtained from respondents in households, they differ from statistics based on reports from individual business establishments, farm enterprises, and certain government programs. People employed at more than one job are counted only once in the census and are classified according to the job at which they worked the greatest number of hours during the reference week. In statistics based on reports from business and farm establishments, people who work for more than one establishment may be counted more than once. Moreover, some establishment-based tabulations may exclude private household workers, unpaid family workers, and self-employed people, but may include workers less than 16 years old. Census tabulations count people who had a job but were not at work among the employed, but these
people may be excluded from employment figures based on establishment payroll reports. Furthermore, census employment tabulations include people on the basis of place of residence regardless of where they work; whereas, establishment data report people at their place of work regardless of where they live. This latter consideration is particularly significant when comparing data for workers who commute between areas.

For several reasons, the unemployment figures of the Census Bureau are not comparable with published figures on unemployment compensation claims. For example, figures on unemployment compensation claims exclude people who have exhausted their benefit rights, new workers who have not earned rights to unemployment insurance, and people losing jobs not covered by unemployment insurance systems (including some workers in agriculture, domestic services, and religious organizations, and self-employed and unpaid family workers). In addition, the qualifications for drawing unemployment compensation differ from the definition of unemployment used by the Census Bureau. People working only a few hours during the week and people with a job, but not at work are sometimes eligible for unemployment compensation but are classified as "employed" in the census. Differences in the geographical distribution of unemployment data arise because the place where claims are filed may not necessarily be the same as the place of residence of the unemployed worker.

The figures on employment status from the decennial census are generally comparable with similar data collected in the Current Population Survey, which is the official source of the monthly national unemployment rate. However, some differences may exist because of variations between the two data sources in enumeration and processing techniques.

## ETHNIC ORIGIN AND RACE

The data on ethnic origin or race were derived from answers to questionnaire Item 5 . The question was based on self-identification and was open-ended (respondents were required to provide the answer). Ethnic origin refers to an individual's origin or descent, "roots," heritage, or place where the individual or his/her parents or ancestors were born. Respondents reported their ethnic group regardless of the number of generations removed from their place or origin. Responses to the ethnic origin or race question reflected the groups with which respondents identified and not necessarily the degree of attachment or association the individual had with the particular group(s).

The racial classification used by the Census Bureau adheres to the October 30, 1997, Federal Register Notice entitled "Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity" issued by the Office of Management and Budget (OMB). These standards govern the categorization of race in census data products. The OMB identified five minimum race categories (White, Black or African American, American Indian or Alaska Native, Asian, and Native Hawaiian or Other Pacific Islander). In addition to the five race groups, the OMB also states that respondents should be offered the option of selecting one or more races. This option was first introduced in Census 2000 for stateside data collection and tabulation, but has been used in the outlying areas since 1980.

Ethnic origin or race is different from other population characteristics that are sometimes regarded as indicators of ethnicity, namely country of birth and language spoken at home. A large number of people reported their ethnic origin or race by specifying a single ethnic group, but some reported two, three, or more ethnic groups. Responses were coded by a procedure that allowed for identification of the first two responses reported.

In tabulations, multiple groups are designated in general open-ended categories, such as "Chamorro and other group(s)," rather than in specific multiple ethnic groups, such as "Chamorro-Carolinian." A few responses consisting of two terms (for example, French Canadian) were considered as a single group and thus, were coded and tabulated as a single ethnicity. Responses such as "Polish-American" or "Italian-American" were tabulated as a single entry (that is, "Polish" or "Italian"). American was accepted as a unique ethnicity if it was given alone, with an ambiguous response, or with state names. If the respondent listed any other ethnic identity such as "Chamorro-American," generally the "American" portion of the response was not coded.

Limitation of the Data. The Census Bureau cannot collect information on religion. Entries of religious groups were not coded separately, but were tabulated in the category "Ethnic group not specified."

Comparability. A question on ethnic origin or race was first asked as an open-ended item in the 1980 census. In Census 2000, much like in previous censuses, respondents were allowed to report more than two ethnic or race groups, but only the first two groups identified were coded. The Census 2000 ethnic origin and race data were imputed using information from other items (parental birthplace and language), other members of the housing unit, or other people in nearby housing units.

## FERTILITY

Children ever born. The data on fertility (also referred to as "children ever born") were derived from answers to questionnaire Item 20a, which asked women 15 years old and over-regardless of their marital status-how many babies they have ever had. Stillbirths, stepchildren, and adopted children were excluded from the number of children ever born.

Data are most frequently presented in terms of the aggregate number of children ever born to women in specified population groups and in terms of the rate per 1,000 women. For the purposes of calculating the aggregate, the open-ended responses category " 15 or more" is assigned a value of 15 .

Comparability: The wording of the question on children ever born was the same in 2000 as in 1990. Data presented for children ever born between 1990 and 2000 are comparable.

## GRADE IN WHICH ENROLLED

The data on grade or level in which enrolled were derived from questionnaire Item 7b. People who were enrolled in school were classified as enrolled in "Prekindergarten," "Kindergarten," "Grade 1 to Grade 4," "Grade 5 to Grade 8," "Grade 9 to Grade 12," "College undergraduate years (freshman to senior)" or "Graduate and professional school (for example: medical, dental, or law school)."

Comparability. Grade of enrollment was first available in the 1940 census, where it was obtained from responses to the question on years attending school. In 1950, the grade was derived from highest grade completed. From 1960 to 1980, grade of enrollment was obtained from the highest grade attended in the two-part question used to measure educational attainment. (For more information, see the discussion under "Educational Attainment.") The form of the question from which level of enrollment was derived in the 1990 census most closely corresponds to the question used in 1950. While data from prior censuses can be aggregated to provide levels of enrollment comparable to the 1990 census and Census 2000, the data from these sources cannot be disaggregated to show single grade of enrollment as in previous censuses.

In the 1990 census, people who were enrolled in school were classified as enrolled in "preprimary school," "elementary or high school," or "college," according to their response to the questionnaire item on highest level of school completed or highest degree received. Those who were enrolled and reported completing nursery school or less were classified as enrolled in "preprimary school," which includes kindergarten. Similarly, those enrolled who had completed at least kindergarten, but not high school, were classified as enrolled in elementary or high school. The enrolled who also reported completing high school or some college or having received a post-secondary degree were classified as enrolled in "college." Those who reported completing the twelfth grade but receiving "NO DIPLOMA" were classified as enrolled in high school.

The Census 2000 question is the first to be asked only of the enrolled and does not serve to measure both year of enrollment and educational attainment. While the attainment item in 1990 served the needs for educational attainment data better than the question used in earlier censuses, it did not serve reporting of enrollment level well.

## GRANDPARENTS AS CAREGIVERS

The data on grandparents as caregivers were derived from answers to questionnaire Item 21, which was asked of the population 15 years old and over. Data were collected on whether a
grandchild lives in the household, whether the grandparent has responsibility for the basic needs of the grandchild, and the duration of that responsibility. Because of the very low number of people under 30 years old who are grandparents, data are only shown for people 30 years old and over.

Existence of a grandchild in the household. This was determined by a "Yes" answer to the question, "Does this person have any of his/her own grandchildren under the age of 18 living in this house or apartment?"

Responsibility for basic needs. This question determines if the grandparent is financially responsible for food, shelter, clothing, day care, etc., for any or all grandchildren living in the household.

Duration of responsibility. The answer refers to the grandchild for whom the grandparent has been responsible for the longest period of time. Duration categories ranged from less than 6 months to 5 years or more.

Comparability. These questions are new to Census 2000. The Personal Responsibility and Work Opportunity Reconciliation Act of 1996 mandated that the decennial census collect data on this subject.

## GROUP QUARTERS

The group quarters population includes all people not living in households. Two general categories of people in group quarters are recognized: (1) the institutionalized population and $(2)$ the noninstitutionalized population.

Institutionalized population. Includes people under formally authorized, supervised care or custody in institutions at the time of enumeration. Such people are classified as "patients or inmates" of an institution regardless of the availability of nursing or medical care, the length of stay, or the number of people in the institution. Generally, the institutionalized population is restricted to the institutional buildings and grounds (or must have passes or escorts to leave) and thus have limited interaction with the surrounding community. Also, they are generally under the care of trained staff who have responsibility for their safekeeping and supervision.

Type of institution. The type of institution was determined as part of census enumeration activities. For institutions that specialize in only one specific type of service, all patients or inmates were given the same classification. For institutions that had multiple types of major services (usually general hospitals and Veterans’ Administration hospitals), patients were classified according to selected types of wards. For example, in psychiatric wards of hospitals, patients were classified in "mental (psychiatric) hospitals"; in general hospital wards for people with chronic diseases, patients were classified in "other hospitals for the chronically ill." Each patient or inmate was classified in only one type of institution. Institutions include the following types:

Correctional institutions. Includes prisons, federal detention centers, military disciplinary barracks and jails, police lockups, halfway houses used for correctional purposes, local jails, and other confinement facilities, including work farms.

Prisons. Where people convicted of crimes serve their sentences. In some census products, the prisons are classified by two types of control: (1) "federal" (operated by the Bureau of Prisons of the Department of Justice) and (2) "state." In census products this category includes federal detention centers. Residents who are criminally insane were classified on the basis of where they resided at the time of enumeration: (1) in institutions (or hospital wards) operated by departments of correction or similar agencies, or (2) in institutions operated by departments of mental health or similar agencies.

Federal detention centers. Operated by the Immigration and Naturalization Service (INS) and the Bureau of Prisons. These facilities include: detention centers used by the Park Police; Bureau of Indian Affairs Detention Centers; INS Centers, such as the INS Federal Alien

Detention Facility; INS Processing Centers; INS Contract Detention Centers used to detain aliens under exclusion or deportation proceedings, as well as those aliens who have not been placed into proceedings, such as custodial required departures; and INS Detention Centers operated within local jails, and state and federal prisons.

Military disciplinary barracks and jails. Operated by military police and used to hold people awaiting trial or convicted of violating military laws.
Local jails and other confinement facilities. Includes facilities operated by counties and cities that primarily hold people beyond arraignment, usually for more than 48 hours and police lockups operated by county and city police that hold people for 48 hours or less only if they have not been formally charged in court. Also, includes work farms used to hold people awaiting trial or serving time on relatively short sentences and jails run by private businesses under contract for local governments (but not by state governments).

Halfway houses. Operated for correctional purposes and include probation and restitution centers, prerelease centers, and community-residential centers.

Other types of correctional institutions. Privately operated correctional facilities and correctional facilities specifically for alcohol or drug abuse.

Nursing homes. Comprises a heterogeneous group of places providing continuous nursing and other services to patients. The majority of patients are elderly, although people who require nursing care because of chronic physical conditions may be found in these homes regardless of their age. Included in this category are skilled-nursing facilities, intermediate-care facilities, long-term care rooms in wards or buildings on the grounds of hospitals, or long-term care rooms/nursing wings in congregate housing facilities. Also included are nursing, convalescent, and rest homes, such as soldiers', sailors', veterans', and fraternal or religious homes for the aged, with nursing care.

Mental (psychiatric) hospitals. Includes hospitals or wards for the criminally insane not operated by a prison and psychiatric wards of general hospitals and veterans' hospitals. Patients receive supervised medical/nursing care from formally trained staff.

Hospitals or wards for chronically ill. Includes hospitals for patients who require long-term care, including those in military hospitals and wards for the chronically ill located on military bases; or other hospitals or wards for the chronically ill, which include tuberculosis hospitals or wards; wards in general and Veterans’ Administration hospitals for the chronically ill; neurological wards; hospices and homes for chronically ill patients; wards for patients with Hansen's Disease (leprosy) and other incurable diseases; and other unspecified wards for the chronically ill. Patients who had no usual home elsewhere were enumerated as part of the institutional population in the wards of general and military hospitals. Most hospital patients are at the hospital temporarily and were enumerated at their usual place of residence. In some census products, patients in hospitals or wards for the chronically ill are classified in three categories: (1) military hospitals or wards for chronically ill, (2) other hospitals or wards for chronically ill, and (3) hospices or homes for chronically ill.

Schools, hospitals, or wards for the mentally retarded. Includes those institutions such as wards in hospitals for the mentally retarded and intermediate-care facilities for the mentally retarded that provide supervised medical/nursing care from formally trained staff.

Schools, hospitals, or wards for the physically handicapped. Includes three types of institutions: institutions for the blind, those for the deaf, and orthopedic wards and institutions for the physically handicapped. Institutions for people with speech problems are classified with "institutions for the deaf." The category "orthopedic wards and institutions for the physically handicapped" includes those institutions providing relatively long-term care to accident victims and to people with polio, cerebral palsy, and muscular dystrophy.

Hospitals and wards for drug/alcohol abuse. Includes hospitals and wards for drug/alcohol abuse. These facilities are equipped medically and designed for the diagnosis and treatment of medical or psychiatric illnesses associated with alcohol or drug abuse. Patients receive supervised medical care from formally trained staff.

Wards in general hospitals for patients who have no usual home elsewhere. Includes maternity, neonatal, pediatric (including wards for boarder babies), and surgical wards of hospitals and wards for people with infectious diseases. If not shown separately, this category includes wards in military hospitals for patients who have no usual home elsewhere.

Wards in military hospitals for patients who have no usual home elsewhere. (See above definition for "Wards in general hospitals for patients who have no usual home elsewhere.")

Juvenile institutions. Includes homes, schools, and other institutions providing care for children (short- or long-term care). Juvenile institutions include the following types:

Homes for abused, dependent, and neglected children. Includes orphanages and other institutions that provide long-term care (usually more than 30 days) for children.

Residential treatment centers. Includes those institutions that primarily serve children who, by clinical diagnosis, are moderately or seriously disturbed emotionally. Also, these institutions provide long-term treatment services, usually supervised or directed by a psychiatrist.

Training schools for juvenile delinquents. Includes residential training schools or homes, and industrial schools, camps, or farms for juvenile delinquents.

Public training schools for juvenile delinquents. Usually operated by a state agency (for example, department of welfare, corrections, or a youth authority). Some are operated by county and city governments. These public training schools are specialized institutions serving delinquent children, generally between the ages of 10 and 17 years old, all of whom are committed by the courts.

Private training schools. Operated under private auspices. Some of the children they serve are committed by the courts as delinquents. Others are referred by parents or social agencies because of delinquent behavior. One difference between private and public training schools is that, by their administrative policy, private schools have control over their selection and intake.

Detention centers. Includes institutions providing short-term care (usually 30 days or less) primarily for delinquent children pending disposition of their cases by a court. This category also covers diagnostic centers. In practice, such institutions may be caring for both delinquent and neglected children pending court disposition.

Noninstitutionalized population. Includes people who live in group quarters other than institutions. Includes staff residing in military and nonmilitary group quarters on institutional grounds who provide formally authorized, supervised care or custody for the institutionalized population.

Group Homes. Includes "community-based homes" that provide care and supportive services. Such places include homes for the mentally ill, mentally retarded, and physically handicapped; drug/alcohol halfway houses not operated for correctional purposes; communes; and maternity homes for unwed mothers.

Homes for the mentally ill. Includes community-based homes that provide care primarily for the mentally ill. Homes that combine treatment of the physically handicapped with treatment of the mentally ill are counted as homes for the mentally ill.

Homes for the mentally retarded. Includes community-based homes that provide care primarily for the mentally retarded. Homes that combine treatment of the physically handicapped with treatment of the mentally retarded are counted as homes for the mentally retarded.

Homes for the physically handicapped. Includes community-based homes for the blind, for the deaf, and other community-based homes for the physically handicapped. People with speech problems are classified with homes for the deaf. Homes that combine treatment of
the physically handicapped with treatment of the mentally ill are counted as homes for the mentally ill. Homes that combine treatment of the physically handicapped with treatment of the mentally retarded are counted as homes for the mentally retarded.

Homes or halfway houses for drug/alcohol abuse. Includes people with no usual home elsewhere in places that provide community-based care and supportive services to people suffering from a drug/alcohol addiction and to recovering alcoholics and drug abusers. Places providing community-based care for drug and alcohol abusers include group homes, detoxification centers, quarterway houses (residential treatment facilities that work closely with accredited hospitals), halfway houses, and recovery homes for ambulatory, mentally competent recovering alcoholics and drug abusers who may be reentering the work force.

Other group homes. Includes people with no usual home elsewhere in communes, foster care homes, and maternity homes for unwed mothers. Most of these types of places provide communal living quarters, generally for people who have formed their own community in which they have common interests and often share or own property jointly. The maternity homes for unwed mothers provide domestic care for unwed mothers and their children. These homes may provide social services and postnatal care within the facility, or may make arrangements for women to receive such services in the community. Nursing services are usually available in the facility.

Religious group quarters. Includes, primarily, group quarters for nuns teaching in parochial schools and for priests living in rectories. It also includes other convents and monasteries, except those associated with a general hospital or an institution.

College quarters off campus. Includes university-owned off-campus housing, if the place is reserved exclusively for occupancy by college students who do not have their families living with them. In census products, people in this category are classified as living in a college dormitory.

College dormitories. Includes college students in dormitories (provided the dormitory is restricted to students who do not have their families living with them), fraternity and sorority houses, and on-campus residential quarters used exclusively for those in religious orders who are attending college. College dormitory housing includes university-owned, on-campus and off-campus housing for unmarried residents.

Military quarters. Includes military personnel living in barracks and dormitories on base, transient quarters on base for temporary residents (both civilian and military), and military ships. However, patients in military hospitals receiving treatment for chronic diseases or who had no usual home elsewhere, and people being held in military disciplinary barracks were included as part of the institutionalized population.

Agriculture workers' dormitories. Includes people in migratory farm workers' camps on farms, bunkhouses for ranch hands, and other dormitories on farms, such as those on "tree farms." (A tree farm is an area of forest land managed to ensure continuous commercial production.)

Other workers' dormitories. Includes people in logging camps, construction workers' camps, firehouse dormitories, job-training camps, energy enclaves (Alaska only), and nonfarm migratory workers' camps (for example, workers in mineral and mining camps).

Dormitories for nurses and interns in general and military hospitals. Includes group quarters for nurses and other staff members, excluding patients. If not shown separately, dormitories for nurses and interns in general and military hospitals are included in the category "Staff Residents of Institutions."

Job corps and vocational training facilities. Includes facilities that provide a full-time, year-round residential program offering a comprehensive array of training, education, and supportive services, including supervised dormitory housing, meals, and counseling for at-risk youth ages 16 through 24.

Emergency and transitional shelters (with sleeping facilities). Includes people without conventional housing who stayed overnight on March 27, 2000, in permanent and emergency housing, missions, Salvation Army shelters, transitional shelters, hotels and motels used to shelter people without conventional housing, and similar places known to have people without conventional housing staying overnight. Also included are shelters that operate on a first come, first-serve basis where people must leave in the morning and have no guaranteed bed for the next night OR where people know that they have a bed for a specified period of time (even if they leave the building every day). Shelters also include facilities that provide temporary shelter during extremely cold weather (such as churches). If shown, this category also includes shelters for children who are runaways, neglected, or without conventional housing.
Shelters for children who are runaways, neglected, or without conventional housing. Includes shelters/group homes that provide temporary sleeping facilities for juveniles. In census products, this category is included with emergency and transitional housing.

Shelters for abused women (shelters against domestic violence or family crisis centers). Includes community-based homes or shelters that provide domiciliary care for women who have sought shelter from family violence and who may have been physically abused. Most shelters also provide care for children of abused women. These shelters may provide social services, meals, psychiatric treatment, and counseling. In census products, this category is included with "other noninstitutional group quarters."

Soup kitchens. Includes soup kitchens, food lines, and programs distributing prepared breakfasts, lunches, or dinners on March 28, 2000. These programs may be organized as food service lines, bag or box lunches, or tables where people are seated, then served by program personnel. These programs may or may not have a place for clients to sit and eat the meal. In census products, this category is included with "other noninstitutional group quarters." This category excludes regularly scheduled mobile food vans.

Targeted nonsheltered outdoor locations. Includes geographically identifiable outdoor locations open to the elements where there is evidence that people who do not usually receive services at soup kitchens, shelters, and mobile food vans lived on March 29, 2000, without paying to stay there. Sites must have a specific location description that allowed a census enumeration team to physically locate the site; for example, "the Brooklyn Bridge at the corner of Bristol Drive" or "the 700 block of Taylor Street behind the old warehouse." Excludes pay-for-use campgrounds; drop-in centers; post offices; hospital emergency rooms; and commercial sites, including all-night theaters and all-night diners. In census products, this category is included with "other noninstitutional group quarters."

Crews of maritime vessels. Includes officers, crew members, and passengers of maritime U.S. flag vessels. All ocean-going and Great Lakes ships are included.
Residential facilities providing "protective oversight." Includes facilities providing assistance to people with disabilities.
Staff residents of institutions. Includes staff residing in military and nonmilitary group quarters on institutional grounds who provide formally authorized, supervised care or custody for the institutionalized population.

Other nonhousehold living situations. Includes people with no usual home elsewhere enumerated at locations such as YMCAs, YWCAs, and hostels. People enumerated at those places that did not have a usual home elsewhere are included in this category.
Living quarters for victims of natural disasters. Includes living quarters for people temporarily displaced by natural disasters.

Comparability. For Census 2000, the definition of the institutionalized population was consistent with the definition used in the 1990 census. As in 1990, the definition of "care" only includes people under organized medical or formally authorized, supervised care or custody. In Census 2000, the 1990 and 1980 rule of classifying ten or more unrelated people living together as living in noninstitutional group quarters was dropped. In 1970, the criteria was six or more unrelated people.

Several changes have occurred in the tabulation of specific types of group quarters. In Census 2000, police lockups were included with local jails and other confinement facilities, and homes for unwed mothers were included in "Other group homes"; in 1990, these categories were shown separately. For the first time, Census 2000 tabulates separately the following types of group quarters: military hospitals or wards for the chronically ill, other hospitals or wards for the chronically ill, hospices or homes for the chronically ill, wards in military hospitals with patients who have no usual home elsewhere, wards in general hospitals with patients who have no usual home elsewhere, and job corps and vocational training facilities. For Census 2000, rooming and boarding houses were classified as housing units rather than group quarters as in 1990.
As in 1990, workers' dormitories were classified as group quarters regardless of the number of people sharing the dormitory. In 1980, ten or more unrelated people had to share the dorm for it to be classified as a group quarters. In 1960, data on people in military barracks were shown only for men. In subsequent censuses, they include both men and women.
The phrase "institutionalized persons" in 1990 data products was changed to "institutionalized population" for Census 2000. In 1990, the Census Bureau used the phrase "other persons in group quarters" for people living in noninstitutional group quarters. In 2000, this group is referred to as the "noninstitutionalized population." The phrase "staff residents" was used for staff living in institutions in both 1990 and 2000.
In Census 2000, the category "emergency and transitional shelters" includes emergency shelters, transitional shelters, and shelters for children who are runaways, neglected, or without conventional housing. Those people tabulated at shelters for abused women, soup kitchens, regularly scheduled mobile food vans, and targeted nonsheltered outdoor locations were included in the category "other noninstitutional group quarters." Each of these categories were enumerated from March 27-29, 2000, during Service-Based enumeration. (For more information on the "Service-Based Enumeration" operation, see "Collection and Processing Procedures.")

## HOUSEHOLD TYPE AND RELATIONSHIP

## Household

A household includes all of the people who occupy a housing unit. (People not living in households are classified as living in group quarters.) A housing unit is a house, an apartment, a mobile home, a group of rooms, or a single room occupied (or if vacant, intended for occupancy) as separate living quarters. Separate living quarters are those in which the occupants live separately from any other people in the building and that have direct access from the outside of the building or through a common hall. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated people who share living quarters.
Average household size. A measure obtained by dividing the number of people in households by the total number of households (or householders). In cases where household members are tabulated by race or Hispanic origin, household members are classified by the race or Hispanic origin of the householder rather than the race or Hispanic origin of each individual. Average household size is rounded to the nearest hundredth.

## Relationship to Householder

Householder. The data on relationship to householder were derived from the question, "How is this person related to Person 1," which was asked of Persons 2 and higher in housing units. One person in each household is designated as the householder (Person 1). In most cases, the householder is the person, or one of the people, in whose name the home is owned, being bought, or rented. If there is no such person in the household, any adult household member 15 years old and over could be designated as the householder (i.e., Person 1).
Households are classified by type according to the sex of the householder and the presence of relatives. Two types of householders are distinguished: family householders and nonfamily householders. A family householder is a householder living with one or more individuals related to him or her by birth, marriage, or adoption. The householder and all of the people in the household related to him or her are family members. A nonfamily householder is a householder living alone or with nonrelatives only.

Spouse (husband/wife). A spouse (husband/wife) is a person married to and living with a householder. People in formal marriages, as well as people in common-law marriages, are included. The number of spouses is equal to the number of "married-couple families" or "married-couple households."

Child. A child is a son or daughter by birth, a stepchild, or an adopted child of the householder, regardless of the child's age or marital status. The category excludes sons-in-law, daughters-inlaw, and foster children.

Natural-born son/daughter. Natural-born son/daughter includes a son or daughter of the householder by birth, regardless of the age of the child.

Adopted son/daughter. Adopted son/daughter includes a son or daughter of the householder by legal adoption, regardless of the age of the child. If a stepson/stepdaughter of the householder has been legally adopted by the householder, the child is then classified as an adopted child.

Stepson/stepdaughter. Stepson/stepdaughter includes a son or daughter of the householder through marriage but not by birth, regardless of the age of the child. If a stepson/stepdaughter of the householder has been legally adopted by the householder, the child is then classified as an adopted child.

Own child. Own child is a never-married child under 18 years who is a son or daughter of the householder by birth, marriage (a stepchild), or adoption.

In certain tabulations, own children are further classified as living with two parents or with one parent only. Own children living with two parents are by definition found only in married-couple families. In a subfamily, an "own child" is a child under 18 years old who is a natural-born child, stepchild, or an adopted child of a mother in a mother-child subfamily, a father in father-child subfamily, or either spouse in a married-couple subfamily. (Note: In the tabulation under "EMPLOYMENT STATUS" of own children under 6 years by employment status of parents, the number of "own children" includes any child under 6 years old in a family or a subfamily who is a son or daughter, by birth, marriage, or adoption, of a member of the householder's family, but not necessarily of the householder.)

Related children. Related children include the sons and daughters of the householder (including natural-born, adopted, or stepchildren) and all other people under 18 years old, regardless of marital status, in the household, who are related to the householder, except the spouse of the householder. Foster children are not included since they are not related to the householder.

Other relatives. Other relatives include any household member related to the householder by birth, marriage, or adoption, but not included specifically in another relationship category. In certain detailed tabulations, the following categories may be shown:

Grandchild. A grandchild is a grandson or granddaughter of the householder.

Brother/sister. Brother/sister refers to the brother or sister of the householder, including stepbrothers, stepsisters, and brothers and sisters by adoption. Brothers-in-law and sisters-in-law are included in the "Other relative" category on the questionnaire.

Parent. Parent refers to the father or mother of the householder, including a stepparent or adoptive parent. Fathers-in-law and mothers-in-law are included in the "Parent-in-law" category on the questionnaire.

Parent-in-law. A parent-in-law is the mother-in-law or father-in-law of the householder.

Son-in-law/daughter-in-law. A son-in-law/daughter-in-law, by definition, is a spouse of the child of the householder.

Other relatives. Other relatives include anyone not listed in a reported category above who is related to the householder by birth, marriage, or adoption (brother-in-law, grandparent, nephew, aunt, cousin, and so forth).

Nonrelatives. Nonrelatives include any household member not related to the householder by birth, marriage, or adoption, including foster children. The following categories may be presented in more detailed tabulations:

Roomer, boarder. A roomer or boarder is a person who lives in a room in the household of Person 1 (householder). Some sort of cash or noncash payment (e.g., chores) is usually made for their living accommodations.

Housemate or roommate. A housemate or roommate is a person who is not related to the householder and who shares living quarters primarily to share expenses.

Unmarried partner. An unmarried partner is a person who is not related to the householder, who shares living quarters, and who has a close personal relationship with the householder.

Foster child. A foster child is a person who is under 18 years old placed by the local government in a household to receive parental care. They may be living in the household for just a brief period or for several years. Foster children are nonrelatives of the householder. If the foster child is also related to the householder, the child should be classified as that specific relative.

Other nonrelatives. Other nonrelatives includes individuals who are not related by birth, marriage, or adoption to the householder and who are not described by the categories given above.

## Unrelated Individual

An unrelated individual is: (1) a householder living alone or with nonrelatives only, (2) a household member who is not related to the householder, or (3) a person living in group quarters who is not an inmate of an institution.

## Family Type

A family includes a householder and one or more other people living in the same household who are related to the householder by birth, marriage, or adoption. All people in a household who are related to the householder are regarded as members of his or her family. A family household may contain people not related to the householder, but those people are not included as part of the householder's family in census tabulations. Thus, the number of family households is equal to the number of families, but family households may include more members than do families. A household can contain only one family for purposes of census tabulations. Not all households contain families since a household may be comprised of a group of unrelated people or of one person living alone.

Families are classified by type as either a "married-couple family" or "other family" according to the presence of a spouse. "Other family" is further broken out according to the sex of the householder.

Married-couple family. This category includes a family in which the householder and his or her spouse are enumerated as members of the same household.

## Other family:

Male householder, no wife present. This category includes a family with a male maintaining a household with no wife of the householder present.

Female householder, no husband present. This category includes a family with a female maintaining a household with no husband of the householder present.

Nonfamily household. This category includes a householder living alone or with nonrelatives only.

Average family size. A measure obtained by dividing the number of people in families by the total number of families (or family householders). In cases where this measure is tabulated by race or Hispanic origin, the race or Hispanic origin refers to that of the householder rather than to the race or Hispanic origin of each individual. Average family size is rounded to the nearest hundredth.

## Subfamily

A subfamily is a married couple with or without own children under 18 years old who are never-married, or a single parent with one or more own never-married children under 18 years old. A subfamily does not maintain their own household, but lives in a household where the householder or householder's spouse is a relative. Subfamilies are defined during the processing of the data.

In some labor force tabulations, both one-parent families and one-parent subfamilies are included in the total number of children living with one parent, while both married-couple families and married-couple subfamilies are included in the total number of children living with two parents.

## Unmarried-Partner Household

An unmarried-partner household is a household that includes a householder and an "unmarried partner." An "unmarried partner" can be of the same or of the opposite sex of the householder. An "unmarried partner" in an "unmarried-partner household" is an adult who is unrelated to the householder, but shares living quarters and has a close personal relationship with the householder. An unmarried-partner household may also be a family household or a nonfamily household, depending on the presence or absence of another person in the household who is related to the householder. There may be only one unmarried-partner per household, and an unmarried partner may not be included in a married-couple household as the householder cannot have both a spouse and an unmarried partner.

Comparability. The 1990 relationship category, "Natural-born or adopted son/daughter" has been replaced by "Natural-born son/daughter" and "Adopted son/daughter." The following categories were added in Census 2000: "Parent-in-law" and "Son-in-law/daughter-in-law." The 1990 nonrelative category, "Roomer, boarder, or foster child" was replaced by two categories: "Roomer, boarder" and "Foster child." In 2000, foster children had to be in the local government's foster care system to be so classified. In 1990, foster children were estimated to be those children in households who were not related to the householder and for whom there were no people 18 years old and over who may have been their parents. In 1990, stepchildren who were adopted by the householder were still classified as stepchildren. In 2000, stepchildren who were legally adopted by the householder were classified as adopted children. Some tables may show relationship to householder and be labeled "child." These tabulations include all marital status categories of natural-born, adopted, or stepchildren. Because of changes in editing procedures, same sex unmarried-partner households in 1990 should not compared with same sex unmarried-partner households in Census 2000.

## INCOME IN 1999

The data on income in 1999 were derived from answers to questionnaire Items 33 and 34, which were asked of the population 15 years old and over. "Total income" is the sum of the amounts reported separately for wage or salary income; net self-employment income; interest, dividends, or net rental or royalty income or income from estates and trusts; social security or railroad retirement income; Supplemental Security Income (SSI); public assistance or welfare payments; retirement, survivor, or disability pensions; remittance income; and all other income.
"Earnings" are defined as the sum of wage or salary income and net income from selfemployment. "Earnings" represent the amount of income received regularly for people 16 years old and over before deductions for personal income taxes, social security, bond purchases, union dues, medicare deductions, etc.

Receipts from the following sources are not included as income: capital gains, money received from the sale of property (unless the recipient was engaged in the business of selling such property); the value of income "in kind" from food stamps, public housing subsidies, medical care, employer contributions for individuals, etc.; withdrawal of bank deposits; money borrowed; tax refunds; exchange of money between relatives living in the same household; and gifts and lump-sum inheritances, insurance payments, and other types of lump-sum receipts.

## Income Type in 1999

The nine types of income reported in the census are defined as follows:

1. Wage or salary income. Wage or salary income includes total money earnings received for work performed as an employee during the calendar year 1999. It includes wages, salary, armed forces pay, commissions, tips, piece-rate payments, and cash bonuses earned before deductions were made for taxes, bonds, pensions, union dues, etc.
2. Self-employment income. Self-employment income includes both farm and nonfarm self-employment income. Nonfarm self-employment income includes net money income (gross receipts minus expenses) from one's own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. Farm self-employment income includes net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his or her own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, government farm programs, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, gravel, etc. Operating expenses include cost of feed, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not state and federal personal income taxes), etc. The value of fuel, food, or other farm products used for family living is not included as part of net income.
3. Interest, dividends, or net rental income. Interest, dividends, or net rental income includes interest on savings or bonds, dividends from stockholdings or membership in associations, net income from rental of property to others and receipts from boarders or lodgers, net royalties, and periodic payments from an estate or trust fund.
4. Social security income. Social security income includes social security pensions and survivors benefits, permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance, and railroad retirement insurance checks from the U.S. government. Medicare reimbursements are not included.
5. Supplemental Security Income (SSI). Supplemental Security Income (SSI) is a nationwide U.S. assistance program administered by the Social Security Administration that guarantees a minimum level of income for needy aged, blind, or disabled individuals. The census questionnaire for Puerto Rico asked about the receipt of SSI; however, SSI is not a federally administered program in Puerto Rico. Therefore, it is probably not being interpreted by most respondents the same as SSI in the United States. The only way a resident of Puerto Rico could have appropriately reported SSI would have been if they lived in the United States at any time during calendar year 1999 and received SSI.
6. Public assistance income. Public assistance income includes general assistance and Temporary Assistance to Needy Families (TANF). Separate payments received for hospital or other medical care (vendor payments) are excluded. This does not include Supplemental Security Income (SSI).
7. Retirement income. Retirement income includes: (1) retirement pensions and survivor benefits from a former employer; labor union; or federal, state, or local government; and the
U.S. military; (2) income from workers' compensation; disability income from companies or unions; federal, state, or local government; and the U.S. military; (3) periodic receipts from annuities and insurance; and (4) regular income from IRA and KEOGH plans. This does not include social security income.
8. Remittance income. Includes money received from relatives who are (1) civilians living outside the household or (2) in the military outside the household; for example, allotments.
9. All other income. All other income includes unemployment compensation, Veterans' Administration (VA) payments, alimony and child support, contributions received periodically from people not living in the household, military family allotments, and other kinds of periodic income other than earnings.

Income of households. This includes the income of the householder and all other individuals 15 years old and over in the household, whether they are related to the householder or not. Because many households consist of only one person, average household income is usually less than average family income. Although the household income statistics cover calendar year 1999, the characteristics of individuals and the composition of households refer to the time of enumeration (April 1, 2000). Thus, the income of the household does not include amounts received by individuals who were members of the household during all or part of calendar year 1999 if these individuals no longer resided in the household at the time of enumeration. Similarly, income amounts reported by individuals who did not reside in the household during 1999 but who were members of the household at the time of enumeration are included. However, the composition of most households was the same during 1999 as at the time of enumeration.

Income of families. In compiling statistics on family income, the incomes of all members 15 years old and over related to the householder are summed and treated as a single amount. Although the family income statistics cover calendar year 1999, the characteristics of individuals and the composition of families refer to the time of enumeration (April 1, 2000). Thus, the income of the family does not include amounts received by individuals who were members of the family during all or part of calendar year 1999 if these individuals no longer resided with the family at the time of enumeration. Similarly, income amounts reported by individuals who did not reside with the family during 1999 but who were members of the family at the time of enumeration are included. However, the composition of most families was the same during 1999 as at the time of enumeration.

Income of individuals. Income for individuals is obtained by summing the nine types of income for each person 15 years old and over. The characteristics of individuals are based on the time of enumeration (April 1, 2000), even though the amounts are for calendar year 1999.
Median income. The median divides the income distribution into two equal parts: one-half of the cases falling below the median income and one-half above the median. For households and families, the median income is based on the distribution of the total number of households and families including those with no income. The median income for individuals is based on individuals 15 years old and over with income. Median income for households, families, and individuals is computed on the basis of a standard distribution (see the "Standard Distributions" section under "Derived Measures"). Median income is rounded to the nearest whole dollar. Median income figures are calculated using linear interpolation if the width of the interval containing the estimate is $\$ 2,500$ or less. If the width of the interval containing the estimate is greater than $\$ 2,500$, Pareto interpolation is used. (For more information on medians and interpolation, see "Derived Measures.")
Aggregate income. Aggregate income is the sum of all incomes for a particular universe. Aggregate income is subject to rounding, which means that all cells in a matrix are rounded to the nearest hundred dollars. (For more information, see "Aggregate" under "Derived Measures.")

Mean income. Mean income is the amount obtained by dividing the aggregate income of a particular statistical universe by the number of units in that universe. Thus, mean household income is obtained by dividing total household income by the total number of households. (The aggregate used to calculate mean income is rounded. For more information, see "Aggregate income.")

For the various types of income, the means are based on households having those types of income. For households and families, the mean income is based on the distribution of the total number of households and families including those with no income. The mean income for individuals is based on individuals 15 years old and over with income. Mean income is rounded to the nearest whole dollar.

Care should be exercised in using and interpreting mean income values for small subgroups of the population. Because the mean is influenced strongly by extreme values in the distribution, it is especially susceptible to the effects of sampling variability, misreporting, and processing errors. The median, which is not affected by extreme values, is, therefore, a better measure than the mean when the population base is small. The mean, nevertheless, is shown in some data products for most small subgroups because, when weighted according to the number of cases, the means can be added to obtained summary measures for areas and groups other than those shown in census tabulations. (For more information on means, see "Derived Measures.")

Earnings. Earnings are defined as the sum of wage or salary income and net income from self-employment. "Earnings" represent the amount of income received regularly for people 16 years old and over before deductions for personal income taxes, social security, bond purchases, union dues, medicare deductions, etc.

Median earnings. The median divides the earnings distribution into two equal parts: one-half of the cases falling below the median earnings and one-half above the median. Median earnings is restricted to individuals 16 years old and over and is computed on the basis of a standard distribution (see the "Standard Distributions" section under "Derived Measures"). Median earnings figures are calculated using linear interpolation if the width of the interval containing the estimate is $\$ 2,500$ or less. If the width of the interval containing the estimate is greater than $\$ 2,500$, Pareto interpolation is used. (For more information on medians and interpolation, see "Derived Measures.")

Aggregate earnings. Aggregate earnings are the sum of wage/salary and net self-employment income for a particular universe of people 16 years old and over. Aggregate earnings are subject to rounding, which means that all cells in a matrix are rounded to the nearest hundred dollars. (For more information, see "Aggregate" under "Derived Measures.")

Mean earnings. Mean earnings is calculated by dividing aggregate earnings by the population 16 years old and over with earnings. (The aggregate used to calculate mean earnings is rounded. For more information, see "Aggregate earnings.") Mean earnings is rounded to the nearest whole dollar. (For more information on means, see "Derived Measures.")

Per capita income. Per capita income is the mean income computed for every man, woman, and child in a particular group. It is derived by dividing the total income of a particular group by the total population in that group. (The aggregate used to calculate per capita income is rounded. For more information, see "Aggregate" under "Derived Measures.") Per capita income is rounded to the nearest whole dollar. (For more information on means, see "Derived Measures.")

Limitation of the data. Since answers to income questions are frequently based on memory and not on records, many people tended to forget minor or sporadic sources of income and, therefore, underreport their income. Underreporting tends to be more pronounced for income sources that are not derived from earnings, such as public assistance, interest, dividends, and net rental income.

Extensive computer editing procedures were instituted in the data processing operation to reduce some of these reporting errors and to improve the accuracy of the income data. These procedures corrected various reporting deficiencies and improved the consistency of reported income items associated with work experience and information on occupation and class of worker. For example, if people reported they were self employed on their own farm, not incorporated, but had reported wage and salary earnings only, the latter amount was shifted to self-employment income. Also, if any respondent reported total income only, the amount was generally assigned to one of the types of income items according to responses to the work experience and class-of-worker
questions. Another type of problem involved nonreporting of income data. Where income information was not reported, procedures were devised to impute appropriate values with either no income or positive or negative dollar amounts for the missing entries. (For more information on imputation, see "Accuracy of the Data.")

In income tabulations for households and families, the lowest income group (for example, less than $\$ 2,500$ ) includes units that were classified as having no 1999 income. Many of these were living on income "in kind," savings, or gifts, were newly created families, or were families in which the sole breadwinner had recently died or left the household. However, many of the households and families who reported no income probably had some money income that was not reported in the census.

Comparability. The income data collected in the 2000 census are almost identical to the 1990 data. The only exception is the "public assistance" question. In 1990, this question asked respondents to report (1) Supplementary Security Income (SSI) payments made by federal or state welfare agencies to low income persons who were aged ( 65 years old and over), blind, or disabled; (2) Aid to Families With Dependent Children (AFDC), and (3) general assistance. In 2000, the Supplemental Security Income (SSI) question was asked separately from the general assistance question. All references to AFDC were dropped due to changes in the welfare programs during the 1990s. In 2000, each person 15 years old or over was asked to report:

- Wage or salary income
- Net self-employment income
- Interest, dividend, or net rental or royalty income
- Social security or railroad retirement income
- Supplemental Security Income (SSI)
- Public assistance income
- Retirement, survivor, or disability pensions
- Remittance income
- Income from all other sources

Between the 1980, 1990, and 2000 censuses, there were minor differences in the processing of the data. In all three censuses, all people with missing values in one or more of the detailed type of income items and total income were designated as allocated. Each missing entry was imputed as a "no" or as a dollar amount. If total income was reported and one or more of the type of income fields was not answered, then the entry in total income generally was assigned to one of the income types according to the socioeconomic characteristics of the income recipient. This person was designated as unallocated.

In 1980, 1990, and 2000, all nonrespondents with income not reported (whether householders or other people) were assigned the reported income of people with similar characteristics. (For more information on imputation, see Chapter 8, Accuracy of the Data.)

There was a difference in the method of computer derivation of aggregate income from individual amounts between the three census processing operations. In the 1980 census, income amounts less than $\$ 100,000$ were coded in tens of dollars, and amounts of $\$ 100,000$ or more were coded in thousands of dollars; $\$ 5$ was added to each amount coded in thousands of dollars. Entries of $\$ 999,000$ or more were treated as $\$ 999,500$ and losses of $\$ 9,999$ or more were treated as minus $\$ 9,999$. In both the 1990 and 2000 censuses, income amounts less than $\$ 999,999$ were entered in dollars. Amounts of \$999,999 or more were treated as $\$ 999,999$ and losses of $\$ 9,999$ or more were treated as minus $\$ 9,999$ in all of the computer derivations of aggregate income.

If a person reported a dollar amount in wage or salary or net self-employment, the person was considered unallocated only if no further dollar amounts were imputed for any additional missing entries.

## INDUSTRY, OCCUPATION, AND CLASS OF WORKER

The data on industry, occupation, and class of worker were derived from answers to questionnaire Items 29, 30, and 31, respectively, which were asked of the population 15 years old and over. Information on industry relates to the kind of business conducted by a person's employing organization; occupation describes the kind of work a person does on the job.

For employed people, the data refer to the person's job during the reference week. For those who worked at two or more jobs, the data refer to the job at which the person worked the greatest number of hours during the reference week. For unemployed people, the data refer to their last job. The industry and occupation statistics are derived from the detailed classification systems developed for Census 2000 as described below.

Respondents provided the data for the tabulations by writing on the questionnaires descriptions of their industry and occupation. All cases were coded by clerical staff, who converted the written questionnaire responses to codes by comparing these responses to entries in the Alphabetical Index of Industries and Occupations. For the industry codes, the coders also referred to an Employer Name List. This list, prepared from the American Business Index (ABI), contained the names of business establishments and their North American Industrial Classification System (NAICS) codes converted to population census equivalents. This list facilitated coding and maintained industrial classification comparability.

## Industry

The industry classification system used during Census 2000 was developed for the census and consists of 265 categories for employed people, classified into 14 major industry groups. From 1940 through 1990, the industrial classification has been based on the Standard Industrial Classification (SIC) Manual. The Census 2000 classification was developed from the 1997 North American Industry Classification System (NAICS) published by the Office of Management and Budget, Executive Office of the President. NAICS is an industry description system that groups establishments into industries based on the activities in which they are primarily engaged.

The NAICS differs from most industry classifications because it is a supply-based, or production-oriented economic concept. Census data, which were collected from households, differ in detail and nature from those obtained from establishment surveys. Therefore, the census classification system, while defined in NAICS terms, cannot reflect the full detail in all categories.

NAICS shows a more detailed hierarchical structure than that used for Census 2000. The expansion from 11 divisions in the SIC to 20 sectors in the NAICS provides groupings that are meaningful and useful for economic analysis. Various statistical programs that previously sampled or published at the SIC levels face problems with the coverage for 20 sectors instead of 11 divisions. These programs requested an alternative aggregation structure for production purposes which was approved and issued by the Office of Management and Budget on May 15, 2001, in the clarification Memorandum No. 2, "NAICS Alternate Aggregation Structure for Use by U.S. Statistical Agencies." Several census data products will use the alternative aggregation, while others, such as Summary File 3 and Summary File 4, will use more detail.

## Occupation

The occupational classification system used during Census 2000 consists of 509 specific occupational categories for employed people arranged into 23 major occupational groups. This classification was developed based on the Standard Occupational Classification (SOC) Manual: 2000, which includes a hierarchical structure showing 23 major occupational groups divided into 96 minor groups, 449 broad groups, and 821 detailed occupations. For Census 2000, tabulations with occupation as the primary characteristic present several levels of occupational detail.

Some occupation groups are related closely to certain industries. Operators of transportation equipment, farm operators and workers, and healthcare providers account for major portions of their respective industries of transportation, agriculture, and health care. However, the industry categories include people in other occupations. For example, people employed in agriculture
include truck drivers and bookkeepers; people employed in the transportation industry include mechanics, freight handlers, and payroll clerks; and people employed in the health care industry include occupations such as security guard and secretary.

## Class of Worker

The data on class of worker were derived from answers to questionnaire Item 31. The information on class of worker refers to the same job as a respondent's industry and occupation, categorizing people according to the type of ownership of the employing organization. The class of worker categories are defined as follows:

Private wage and salary workers. Private wage and salary workers include people who worked for wages, salary, commission, tips, pay-in-kind, or piece rates for a private for-profit employer or a private not-for-profit, tax-exempt, or charitable organization. Self-employed people whose business was incorporated are included with private wage and salary workers because they are paid employees of their own companies. Some tabulations present data separately for these subcategories: "for-profit," "not-for-profit," and "own business incorporated."

Government workers. Government workers includes people who were employees of any federal, tribal, state, or local governmental unit, regardless of the activity of the particular agency. For some tabulations, the data were presented separately for federal (includes tribal), state, and local governments. Employees of foreign governments, the United Nations, or other formal international organizations were classified as "federal government," unlike the 1990 census when they were classified as "private not-for-profit."

Self-employed in own not incorporated business workers. Self-employed in own not incorporated business workers includes people who worked for profit or fees in their own unincorporated business, professional practice, or trade, or who operated a farm.

Unpaid family workers. Unpaid family workers includes people who worked 15 hours or more without pay in a business or on a farm operated by a relative.

Self-employed in own incorporated business workers. In tabulations, this category is included with private wage and salary workers because they are paid employees of their own companies.

The industry category, "Public administration," is limited to regular government functions, such as legislative, judicial, administrative, and regulatory activities of governments. Other government organizations, such as schools, hospitals, liquor stores, and bus lines, are classified by industry according to the activity in which they are engaged. On the other hand, the class of worker government categories include all government workers.

In some cases, respondents supplied industry, occupation, or class of worker descriptions that were not sufficiently specific for a precise classification or did not report on these items at all. In the coding operation, certain types of incomplete entries were corrected using the Alphabetical Index of Industries and Occupations. For example, it was possible in certain situations to assign an industry code based on the occupation reported, or vice versa.
Following the coding operations, there was a computer edit and an allocation process. The edit first determined whether a respondent was in the universe that required an industry and occupation code. The codes for the three items (industry, occupation, and class of worker) were checked to ensure they were valid and were edited for their relation to each other. Invalid and inconsistent codes were either blanked or changed to a consistent code.

If one or more of the three codes was blank after the edit, a code was assigned from a "similar" person based on other items, such as age, sex, education, farm or nonfarm residence, and weeks worked. If all of the labor force and income data were blank, all of these economic items were assigned from one other person or one other household who provided all the necessary data.

Comparability. Comparability of industry and occupation data was affected by a number of factors, primarily the systems used to classify the questionnaire responses. For both the industry and occupation classification systems, the basic structures were generally the same from 1940 to

1970, but changes in the individual categories limited comparability of the data from one census to another. These changes were needed to recognize the "birth" of new industries and occupations, the "death" of others, the growth and decline in existing industries and occupations, and the desire of analysts and other users for more detail in the presentation of the data. Probably the greatest cause of noncomparability is the movement of a segment of a category to a different category in the next census. Changes in the nature of jobs and respondent terminology and refinement of category composition made these movements necessary. The 1990 occupational classification system was essentially the same as the 1980 census. However, the industry classification had minor changes between 1980 and 1990 that reflected changes to the Standard Industrial Classification (SIC).

In Census 2000, both the industry and occupation classifications had major revisions to reflect changes to the North American Industrial Classification System (NAICS) and the Standard Occupational Classification (SOC). The conversion of the census classifications in 2000 means that the 2000 classification systems are not comparable to the classifications used in the 1990 census and earlier.

Other factors that affected data comparability over the decades include the universe to which the data referred (in 1970, the age cutoff for labor force was changed from 14 years old to 16 years old); the wording of the industry and occupation questions on the questionnaire (for example, important changes were made in 1970); improvements in the coding procedures (the Employer Name List technique was introduced in 1960); and how the "not reported" cases were handled. Prior to 1970, they were placed in the residual categories, "industry not reported" and "occupation not reported." In 1970, an allocation process was introduced that assigned these cases to major groups. In Census 2000, as in 1980 and 1990, the "not reported" cases were assigned to individual categories. Therefore, the 1980, 1990, and Census 2000 data for individual categories include some numbers of people who would have been tabulated in a "not reported" category in previous censuses.

The following publications contain information on the various factors affecting comparability and are particularly useful for understanding differences in the occupation and industry information from earlier censuses: U.S. Census Bureau, Changes Between the 1950 and 1960 Occupation and Industry Classifications With Detailed Adjustments of 1950 Data to the 1960 Classifications, Technical Paper No. 18, 1968; U.S. Census Bureau, 1970 Occupation and Industry Classification Systems in Terms of Their 1960 Occupation and Industry Elements, Technical Paper No. 26, 1972; and U.S. Census Bureau, The Relationship Between the 1970 and 1980 Industry and Occupation Classification Systems, Technical Paper No. 59, 1988. For citations for earlier census years, see the 1980 Census of Population report, PC80-1-D, Detailed Population Characteristics.

The 1990 census introduced an additional class of worker category for "private not-for-profit" employers, which is also used for Census 2000. This category is a subset of the 1980 category "employee of private employer" so there is no comparable data before 1990. Also in 1990, employees of foreign governments, the United Nations, etc., were classified as "private not-for-profit," rather than "Federal Government" as in 1970, 1980, and Census 2000. While in theory, there was a change in comparability, in practice, the small number of U.S. residents working for foreign governments made this change negligible.

Comparability between the statistics on industry and occupation from Census 2000 and statistics from other sources is affected by many of the factors described in the "Employment Status" section. These factors are primarily geographic differences between residence and place of work, different dates of reference, and differences in counts because of dual job holdings. Industry data from population censuses cover all industries and all kinds of workers, whereas, data from establishments often exclude private household workers, government workers, and the self employed. Also, the replies from household respondents may have differed in detail and nature from those obtained from establishments.

Occupation data from the census and data from government licensing agencies, professional associations, trade unions, etc., may not be as comparable as expected. Organizational listings often include people not in the labor force or people devoting all or most of their time to another
occupation; or the same person may be included in two or more different listings. In addition, relatively few organizations, except for those requiring licensing, attained complete coverage of membership in a particular occupational field.

## JOURNEY TO WORK

## Place of Work

The data on place of work were derived from answers to questionnaire Item 24, which was asked of the population 15 years old and over. This question was asked of people who indicated in question 23 that they worked for pay or profit at some time during the reference week. (For more information, see "Reference Week.")

Data were tabulated for workers 16 years old and over; that is, members of the armed forces and civilians who were at work during the reference week. Data on place of work refer to the geographic location at which workers carried out their occupational activities during the reference week. The name of the general area of the place of work (island, U.S. state, commonwealth, territory, or foreign country) was asked, as well as the place (city, town, or village). If the person's employer operated in more than one location, the location or branch where the respondent worked was requested.

Limitation of the data. The data on place of work relate to a reference week; that is, the calendar week preceding the date on which the respondents completed their questionnaires or were interviewed by enumerators. This week is not the same for all respondents because the enumeration was not completed in 1 week.

However, for the majority of people, the reference week for Census 2000 is the week ending with April 1, 2000. The lack of a uniform reference week means that the place-of-work data reported in Census 2000 do not exactly match the distribution of workplace locations observed or measured during an actual work week.

The place-of-work data are estimates of people 16 years old and over who were both employed and at work during the reference week (including people in the armed forces). People who did not work during the reference week but had jobs or businesses from which they were temporarily absent due to illness, bad weather, industrial dispute, vacation, or other personal reasons are not included in the place-of-work data. Therefore, the data on place of work understate the total number of jobs or total employment in a geographic area during the reference week. It also should be noted that people who had irregular, casual, or unstructured jobs during the reference week may have erroneously reported themselves as not working.

The location where the individual worked most often during the reference week was recorded on the Census 2000 questionnaire. If a worker held two jobs, only data about the primary job (the one worked the greatest number of hours during the preceding week) was requested. People who regularly worked in several locations during the reference week were requested to give the address at which they began work each day. For cases in which daily work was not begun at a central place each day, the person was asked to provide as much information as possible to describe the area in which he or she worked most during the reference week.

Comparability. The wording of the question on place of work was substantially the same in Census 2000 as the 1990 census. For Census 2000 and the 1990 census, when place of work was not reported or the response was incomplete, a work location was allocated to the person based on their means of transportation to work, travel time to work, industry, and location of residence and workplace of others.

## Means of Transportation to Work

The data on means of transportation to work were derived from answers to questionnaire Item $25 a$, which was asked of the population 15 years old and over. This question was asked of people who indicated in question 23 that they worked at some time during the reference week. (For more information, see "Reference Week.") Means of transportation to work refers to the principal mode
of travel or type of conveyance that the worker usually used to get from home to work during the reference week. Data were tabulated for workers 16 years old and over; that is, members of the armed forces and civilians who were at work during the reference week.

People who used different means of transportation on different days of the week were asked to specify the one they used most often, that is, the greatest number of days. People who used more than one means of transportation to get to work each day were asked to report the one used for the longest distance during the work trip. The category "Car, truck, or private van/bus - drove alone" includes people who usually drove alone to work, as well as people who were driven to work by someone who then drove back home or to a nonwork destination during the reference week. The category "Car, truck, or private van/bus - carpooled" includes workers who reported that two or more people usually rode to work in the vehicle during the reference week. The category "Public transportation" includes workers who usually used a public van or bus, boat, or taxicab during the reference week. The category "Other means" includes workers who used a mode of travel that is not identified separately. The category "Other means" may vary from table to table, depending on the amount of detail shown in a particular distribution.

The means of transportation data for some areas may show workers using modes of public transportation that are not available in those areas (for example, taxicab riders in a metropolitan area where there actually is no taxicab service). This result is largely due to people who worked during the reference week at a location that was different from their usual place of work (such as people away from home on business in an area where taxicab service was available) and people who used more than one means of transportation each day but whose principal means was unavailable where they lived (for example, residents of areas who walked to a location and took the boat most of the distance to work).

## Private Vehicle Occupancy

The data on private vehicle occupancy were derived from answers to questionnaire Item 25b, which was asked of the population 15 years old and over. This question was asked of people who indicated in question 23 that they worked at some time during the reference week and who reported in question 25 a that their means of transportation to work was "Car, truck, or private van/bus." (For more information, see "Reference Week.") Data were tabulated for workers 16 years old and over; that is, members of the armed forces and civilians who were at work during the reference week.

Private vehicle occupancy refers to the number of people who usually rode to work in the vehicle during the reference week. The category "Drove alone," includes people who usually drove alone to work as well as people who were driven to work by someone who then drove back home or to a nonwork destination. The category "Carpooled," includes workers who reported that two or more people usually rode to work in the vehicle during the reference week.

Workers per car, truck, or private van/bus. This is obtained by dividing the number of people who reported using a car, truck, or private van/bus to get to work by the number of such vehicles that they used. The number of vehicles used is derived by counting each person who drove alone as one vehicle, each person who reported being in a 2-person carpool as one-half of a vehicle, each person who reported being in a three-person carpool as one-third of a vehicle, and so on, and then summing all the vehicles. Workers per car, truck, or private van/bus is rounded to the nearest hundredth.

## Time Leaving Home to Go to Work

The data on time leaving home to go to work were derived from answers to questionnaire Item $26 a$, which was asked of the population 15 years old and over. This question was asked of people who indicated in question 23 that they worked for pay or profit at some time during the reference week and who reported in question 25a that they worked outside their home. The departure time refers to the time of day that the person usually left home to go to work during the reference week. (For more information, see "Reference Week.") Data were tabulated for workers 16 years old and over; that is, members of the armed forces and civilians who were at work during the reference week.

## Travel Time to Work

The data on travel time to work were derived from answers to questionnaire Item 26b, which was asked of the population 15 years old and over. This question was asked of people who indicated in question 23 that they worked for pay or profit at some time during the reference week and who reported in question 25 a that they worked outside their home. Travel time to work refers to the total number of minutes that it usually took the person to get from home to work each day during the reference week. The elapsed time includes time spent waiting for public transportation, picking up passengers in carpools, and time spent in other activities related to getting to work. (For more information, see "Reference Week.") Data were tabulated for workers 16 years old and over; that is, members of the armed forces and civilians who were at work during the reference week.

Aggregate travel time to work (minutes). Aggregate travel time to work (minutes) is calculated by adding together all the number of minutes each worker traveled to work (one way) for specified travel times and/or means of transportation. Aggregate travel time to work is zero if the aggregate is zero, is rounded to 4 minutes if the actual aggregate is 1 to 7 minutes, and is rounded to the nearest multiple of 5 minutes for all other values (if the aggregate is not already evenly divisible by 5). (For more information, see "Aggregate" under "Derived Measures.")

Mean travel time to work (minutes). Mean travel time to work is the average travel time in minutes that workers usually took to get from home to work (one way) during the reference week. This measure is obtained by dividing the total number of minutes taken to get from home to work by the number of workers 16 years old and over who did not work at home. The travel time includes time spent waiting for public transportation, picking up passengers in carpools, and time spent in other activities related to getting to work. Mean travel times of workers having specific characteristics also are computed. For example, the mean travel time of workers traveling 45 or more minutes is computed by dividing the aggregate travel time of workers whose travel time was 45 or more minutes by the number of workers whose travel time was 45 or more minutes. Mean travel time to work is rounded to the nearest tenth. (For more information on means, see "Derived Measures.")

## LANGUAGE SPOKEN AT HOME AND RELATIVE FREQUENCY OF OTHER LANGUAGE AND ENGLISH USAGE

## Language Spoken at Home

Data on language spoken at home were derived from answers to questionnaire Items 9a and 9b. Data were edited to include in tabulations only the population 5 years old and over. Questions 9a and $9 b$ referred to languages spoken at home in an effort to measure the current use of languages other than English. People who knew languages other than English but did not use them at home or who only used them elsewhere were excluded.

A respondent was asked to mark "Yes" in question 9a if the person sometimes or always spoke a language other than English at home. For people who indicated that they spoke a language other than English at home in question 9a, but failed to specify the name of the language in question 9 b , the language was assigned based on the language of other speakers in the household, or on the language of a person of the same ethnic origin and other demographic characteristics. People for whom a language other than English was entered in question 9b, and for whom question 9a was blank were assumed to speak that other language at home.

The responses to Question 9b (specific language spoken) was written-in on the questionnaire and later given a three-digit code using a detailed list of languages, which distinguished more than 380 languages or language groups, in a separate clerical coding operation. The same list was used for the 1980 and 1990 censuses. If the respondent listed more than one non-English language, only the first was coded.

The write-in responses represented the names people used for languages they speak. They may not match the names or categories used by linguists. The sets of categories used are sometimes geographic and sometimes linguistic.

For the Pacific Islands, several general categories of languages were used. Different specific languages were identified separately for Guam, American Samoa and the Commonwealth of the Northern Mariana Islands.

Pacific Island languages include Carolinian, Chamorro, Chuukese, Hawaiian, Indonesian, Malay, Palau, Ponapean, Samoan, Tongan, Philippine languages (Tagalog, Bikol, Bisayan, Sebuano, llocano, Pampangan, and Pangasinan), other Micronesian languages, and other Polynesian languages.

Asian languages include Chinese, Japanese, Korean, languages of Southeast Asia, such as Vietnamese and Thai, Dravidian languages of India, such as Malayalam, Tamil, and Telugu, and the Turkic languages

Other languages not shown separately include Indo-European languages of Europe, India (the Indic languages, such as Hindi, Urdu, Bengali, Gujarati, and Punjabi), and the Middle East and other languages of the Americas, Africa, and the Middle East.

Household language. In households where one or more people (5 years old and over) speak a language other than English, the household language assigned to all household members is the non-English language spoken by the first person with a non-English language in the following order: householder, spouse, parent, sibling, child, grandchild, in-laws, other relatives, stepchild, unmarried partner, housemate or roommate, and other nonrelatives. Thus, a person who speaks only English may have a non-English household language assigned to him/her in tabulations of individuals by household language.

Relative frequency of other language and English usage. People who reported in 9a that they spoke a language other than English at home were asked to report in item 9c the frequency with which they spoke the other language relative to English in one of the following categories: "more frequently than English," "both, equally often," "less frequently than English," or "does not speak English."

Comparability. The language questions were asked for the first time in the 1980 census. The language categories shown in the tabulations are slightly different from earlier censuses. In the U.S. census a question is asked on ability to speak English rather than frequency of use.

## MARITAL STATUS

The data on marital status were derived from answers to questionnaire Item 6. The marital status classification refers to the status at the time of enumeration. Data on marital status are tabulated only for the population 15 years old and over.

Each person was asked whether they were "Now married," "Widowed," "Divorced," "Separated," or "Never married." Couples who live together (for example, people in common-law marriages) were able to report the marital status they considered to be the most appropriate.

Never married. Never married includes all people who have never been married, including people whose only marriage(s) was annulled.

Ever married. Ever married includes people married at the time of enumeration, along with those who are separated, widowed, or divorced.

Now married, except separated. Now married, except separated includes people whose current marriage has not ended through widowhood or divorce; or who are not currently separated. The category also may include people in common-law marriages if they consider this category the most appropriate. In certain tabulations, currently married people are further classified as "spouse present" or "spouse absent."

Separated. Separated includes people with legal separations, people living apart with intentions of obtaining a divorce, and people who are permanently or temporarily separated because of marital discord.

Widowed. This category includes widows and widowers who have not remarried.
Divorced. This category includes people who are legally divorced and who have not remarried.
Now married. All people whose current marriage has not ended by widowhood or divorce. This category includes people defined above as "separated."

Spouse present. Married people whose wives or husbands were enumerated as members of the same household or the same group quarters facility, including those whose spouses may have been temporarily absent for such reasons as travel or hospitalization.

Spouse absent. Married people whose wives or husbands were not enumerated as members of the same household or the same group quarters facility.

Separated. Defined above.
Spouse absent, other. Married people whose wives or husbands were not enumerated as members of the same household, excluding separated. For example, this includes any person whose spouse was employed and living away from home, in an institution, or away in the armed forces.

Differences between the number of currently married males and the number of currently married females occur because of reporting differences and because some husbands and wives have their usual residence in different areas. These differences also can occur because different weights are applied to the individual's data. Any differences between the number of "now married, spouse present" males and females are due solely to sample weighting procedures. By definition, the numbers would be the same.

Comparability. Census 2000 marital status definitions are the same as those used in 1990.

## MILITARY DEPENDENCY

The data on military dependency were derived from the answers to questionnaire Item 15. The item was used to determine whether a person who was not on active duty in the armed forces at the time of enumeration was either (1) a dependent of either (a) an active-duty member of the armed forces, or (b) a retired member of the armed forces or of an active-duty or retired member of the full-time National Guard or Armed Forces Reserve; or (2) not a military dependent. (For information on armed forces, see "Employment Status.")

Comparability This item was asked for the first time in 1990.

## PLACE OF BIRTH

The data on place of birth were derived from answers to questionnaire Item 10. Mother's place of birth and father's place of birth were derived from answers to questionnaire Items 14a and 14b. Each place of birth question asked to report the name of the island (village in American Samoa), U.S. state, commonwealth, territory, or foreign country where they or their parents were born. People not reporting a place of birth were assigned the birthplace of another family member or were imputed the response of another person with similar characteristics. People born outside the area were asked to report their place of birth according to current international boundaries. Since numerous changes in boundaries of foreign countries have occurred in the last century, some people may have reported their place of birth in terms of boundaries that existed at the time of their birth or emigration, or in accordance with their own national preference.

Nativity. Information on place of birth and citizenship status was used to classify the population into two major categories: native and foreign born. (See "Native" and "Foreign Born" under "Citizenship Status.")

Comparability. Similar data were shown in tabulations for the 1990 census.

## POVERTY STATUS IN 1999

The poverty data were derived from answers to questionnaire Items 33 and 34 , the same questions used to derive income data. (For more information, see "Income in 1999.") The Census Bureau uses the federal government's official poverty definition. The Social Security Administration (SSA) developed the original poverty definition in 1964, which federal interagency committees subsequently revised in 1969 and 1980. The Office of Management and Budget's (OMB's) Directive 14 prescribes this definition as the official poverty measure for federal agencies to use in their statistical work.

## Derivation of the Current Poverty Measure

When the Social Security Administration (SSA) created the poverty definition in 1964, it focused on family food consumption. The U.S. Department of Agriculture (USDA) used its data about the nutritional needs of children and adults to construct food plans for families. Within each food plan, dollar amounts varied according to the total number of people in the family and the family's composition, such as the number of children within each family. The cheapest of these plans, the Economy Food Plan, was designed to address the dietary needs of families on an austere budget.

Since the USDA's 1955 Food Consumption Survey showed that families of three or more people across all income levels spent roughly one-third of their income on food, the SSA multiplied the cost of the Economy Food Plan by three to obtain dollar figures for the poverty thresholds. Since the Economy Food Plan budgets varied by family size and composition, so too did the poverty thresholds. For 2-person families, the thresholds were adjusted by slightly higher factors because those households had higher fixed costs. Thresholds for unrelated individuals were calculated as a fixed proportion of the corresponding thresholds for 2-person families.

The poverty thresholds are revised annually to allow for changes in the cost of living as reflected in the Consumer Price Index (CPI-U). The poverty thresholds are the same for all parts of the country - they are not adjusted for regional, state or local variations in the cost of living. For a detailed discussion of the poverty definition, see U.S. Census Bureau, Current Population Reports, "Poverty in the United States: 1999," P-60-210.

## How Poverty Status is Determined

The poverty status of families and unrelated individuals in 1999 was determined using 48 thresholds (income cutoffs) arranged in a two dimensional matrix. The matrix consists of family size (from 1 person to 9 or more people) cross-classified by presence and number of family members under 18 years old (from no children present to 8 or more children present). Unrelated individuals and 2-person families were further differentiated by the age of the reference person (RP) (under 65 years old and 65 years old and over).

To determine a person's poverty status, one compares the person's total family income with the poverty threshold appropriate for that person's family size and composition (see table below). If the total income of that person's family is less than the threshold appropriate for that family, then the person is considered poor, together with every member of his or her family. If a person is not living with anyone related by birth, marriage, or adoption, then the person's own income is compared with his or her poverty threshold.

Weighted average thresholds. Even though the official poverty data are based on the 48 thresholds arranged by family size and number of children within the family, data users often want to get an idea of the "average" threshold for a given family size. The weighted average thresholds provide that summary. They are weighted averages because for any given family size, families with a certain number of children may be more or less common than families with a different number of children. In other words, among 3-person families, there are more families with two adults and one child than families with three adults. To get the weighted average threshold for families of a particular size, multiply each threshold by the number of families for whom that threshold applies; then add up those products, and divide by the total number of families who are of that family size.

For example, for 3-person families, 1999 weighted thresholds were calculated in the following way using information from the 2000 Current Population Survey:

| Family type | Number of families |  | Threshold |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| No children (three adults) | 5,213 | * | \$13,032 | = | \$67,935,816 |
| One child (two adults) | 8,208 | * | \$13,410 | $=$ | \$110,069,280 |
| Two children (one adult) | 2,656 | * | \$13,423 | = | \$35,651,488 |
| Totals | 16,077 |  |  |  | \$213,656,584 |

Source: Current Population Survey, March 2000.

Dividing $\$ 213,656,584$ by 16,077 (the total number of 3 -person families) yields $\$ 13,290$, the weighted average threshold for 3-person families. Please note that the thresholds are weighted not just by the number of poor families, but by all families for which the thresholds apply: the thresholds are used to determine which families are at or above poverty, as well as below poverty.

Individuals for whom poverty status is determined. Poverty status was determined for all people except institutionalized people, people in military group quarters, people in college dormitories, and unrelated individuals under 15 years old. These groups also were excluded from the numerator and denominator when calculating poverty rates. They are considered neither "poor" nor "nonpoor."

Specified poverty levels. For various reasons, the official poverty definition does not satisfy all the needs of data users. Therefore, some of the data reflect the number of people below different percentages of the poverty level. These specified poverty levels are obtained by multiplying the official thresholds by the appropriate factor. For example, the average income cutoff at 125 percent of the poverty level was $\$ 21,286(\$ 17,029 \times 1.25)$ in 1999 for family of four people.

Poverty Threshold in 1999, by Size of Family and Number of Related Children Under 18 Years Old
(Dollars)

| Size of family unit | Weighted average threshold | Related children under 18 years old |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | None | One | Two | Three | Four | Five | Six | Seven | Eight or more |
| One person (unrelated |  |  |  |  |  |  |  |  |  |  |
| individual) . . . . . . . . | 8501 |  |  |  |  |  |  |  |  |  |
| Under 65 years old | 8667 | 8667 |  |  |  |  |  |  |  |  |
| 65 years and over old and over | 7990 | 7990 |  |  |  |  |  |  |  |  |
| Two people | 10869 |  |  |  |  |  |  |  |  |  |
| Householder under 65 years old | 11214 | 11156 | 11483 |  |  |  |  |  |  |  |
| Householder 65 years old and over | 10075 | 10070 | 11440 |  |  |  |  |  |  |  |
| Three people | 13290 | 13032 | 13410 | 13423 |  |  |  |  |  |  |
| Four people | 17029 | 17184 | 17465 | 16895 | 16954 |  |  |  |  |  |
| Five people | 20127 | 20723 | 21024 | 20380 | 19882 | 19578 |  |  |  |  |
| Six people | 22727 | 23835 | 23930 | 23436 | 22964 | 22261 | 21845 |  |  |  |
| Seven people | 25912 | 27425 | 27596 | 27006 | 26595 | 25828 | 24934 | 23953 |  |  |
| Eight people | 28967 | 30673 | 30944 | 30387 | 29899 | 29206 | 28327 | 27412 | 27180 |  |
| Nine people or more . . . . | 34417 | 36897 | 37076 | 36583 | 36169 | 35489 | 34554 | 33708 | 33499 | 32208 |

Income deficit. Income deficit represents the difference between the total income of families and unrelated individuals below the poverty level and their respective poverty thresholds. In computing the income deficit, families reporting a net income loss are assigned zero dollars and for such cases the deficit is equal to the poverty threshold.

This measure provides an estimate of the amount which would be required to raise the incomes of all poor families and unrelated individuals to their respective poverty thresholds. The income deficit is thus a measure of the degree of the impoverishment of a family or unrelated individual.

However, please use caution when comparing the average deficits of families with different characteristics. Apparent differences in average income deficits may, to some extent, be a function of differences in family size.

Aggregate income deficit. Aggregate income deficit refers only to those families or unrelated individuals who are classified as below the poverty level. It is defined as the group (e.g., type of family) sum total of differences between the appropriate threshold and total family income or total personal income. Aggregate income deficit is subject to rounding, which means that all cells in a matrix are rounded to the nearest hundred dollars. (For more information, see "Aggregate" under "Derived Measures.")

Mean income deficit. Mean income deficit represents the amount obtained by dividing the total income deficit for a group below the poverty level by the number of families (or unrelated individuals) in that group. (The aggregate used to calculate mean income deficit is rounded. For more information, see "Aggregate income deficit.") As mentioned above, please use caution when comparing mean income deficits of families with different characteristics, as apparent differences may to some extent be a function of differences in family size. Mean income deficit is rounded to the nearest whole dollar. (For more information on means, see "Derived Measures.")

Comparability. The poverty definition used in the 1980 census and later differed slightly from the one used in the 1970 census. Three technical modifications were made to the definition used in the 1970 census:

1. Beginning with the 1980 census, the Office of Management and Budget eliminated any distinction between thresholds for "families with a female householder with no husband present" and all other families. The new thresholds - which apply to all families regardless of the householder's sex - were a weighted average of the old thresholds.
2. The Office of Management and Budget eliminated any differences between farm families and nonfarm families, and farm and nonfarm unrelated individuals. In the 1970 census, the farm thresholds were 85 percent of those for nonfarm families; whereas, in 1980 and later, the same thresholds were applied to all families and unrelated individuals regardless of residence.
3. The thresholds by size of family were extended from seven or more people in 1970 to nine or more people in 1980 and later.

These changes resulted in a minimal increase in the number of poor at the national level. For a complete discussion of these modifications and their impact, see U.S. Census Bureau, Current Population Reports, "Characteristics of the Population Below the Poverty Level: 1980," P-60, No. 133.

With respect to poverty, the population covered in the 1970 census was almost the same as that covered in the 1980 census and later. The only difference was that in 1980 and after, unrelated individuals under 15 years old were excluded from the poverty universe, while in 1970, only those under age 14 were excluded. The limited poverty data from the 1960 census excluded all people in group quarters and included all unrelated individuals regardless of age. It was unlikely that these differences in population coverage would have had significant impact when comparing the poverty data for people since the 1960 census.

Household poverty data. Poverty status is not defined for households - only for families and unrelated individuals. Because some data users need poverty data at the household level, we have provided a few matrices that show tallies of households by the poverty status of the householder. In these matrices, the householder's poverty status is computed exactly the same way as described above. Therefore, to determine whether or not a "household" was in poverty, anyone who is not related to the householder is ignored.

Example \#1: Household \#1 has six members - a married couple, Alice and Albert, with their 10-year-old nephew, Aaron, and another married couple, Brian and Beatrice, with their 6-year-old son, Ben. Alice is the householder. Brian, Beatrice, and Ben are not related to Alice.

| Household member | Relationship to Alice | Income |
| :--- | :--- | :--- |
| Alice | self (householder) | $\$ 5,000$ |
| Albert | spouse | $\$ 40,000$ |
| Aaron | related child | $\$ 0$ |
| Brian | unrelated individual | $\$ 0$ |
| Beatrice | unrelated individual | $\$ 5,000$ |
| Ben | unrelated individual | $\$ 0$ |

The total income of Alice's family is $\$ 45,000$, and their poverty threshold is $\$ 13,410$, since there are three people in the family, with one member under age 18 . Their income is greater than their threshold, so they are not classified as poor. Their ratio of income to poverty is $3.36(\$ 45,000$ divided by $\$ 13,410$ ). Alice's income-to-poverty ratio is also 3.36 , because everyone in the same family has the same poverty status.
Even though Brian, Beatrice and Ben would be classified as poor if they lived in their own household, the household is not classified as poor because the householder, Alice, is not poor, as was shown in the computation above.

Example \#2: Household \#2 consists of four adults, Claude, Danielle, Emily, and Francis, who are unrelated to each other and are living as housemates. Claude, who is age 30, is the householder.

| Household member | Relationship to Claude | Income |
| :--- | :--- | :--- |
| Claude | self (householder) | $\$ 4,500$ |
| Danielle | unrelated individual | $\$ 82,000$ |
| Emily | unrelated individual | $\$ 28,000$ |
| Francis | unrelated individual | $\$ 40,000$ |

Because Claude is under age 65 and is not living with any family members, his poverty threshold is $\$ 8,667$. Since his income, $\$ 4,500$, is less than his threshold, he is considered poor. His ratio of income to poverty is 0.52 ( $\$ 4,500$ divided by $\$ 8,667$ ).
Household \#2 would be classified as poor because its householder, Claude, is poor, even though the other household members (who are not related to Claude) are not in poverty.

## REASONS FOR MOVING

The data on reasons for moving were derived from answers to questionnaire Item 13. This question asked people who were born outside the area what was their main reason for moving to this area. There are nine categories to select from including the "Other" category for reasons not listed.

All cases of nonresponse or incomplete response that were not assigned a previous residence based on information from the householder or other family members were imputed the reason of another person with similar characteristics who provided complete information on reason for moving.

The 2000 census questions tabulations, and census data products about citizenship, year of entry, and reason for moving included no reference to immigration. All people who were born and resided outside the area before becoming residents had a reason for moving. Some of these people were U.S. citizens by birth (born in the United States, Puerto Rico, or another Island Area, or born abroad of American parents).

Comparability. This is the first time this question was asked; thus, no comparable data exists.

## REFERENCE WEEK

The data on employment status and commuting to work are related to a 1 -week time period, known as the reference week. For each person, this week is the full calendar week, Sunday through Saturday, preceding the date the questionnaire was completed. This calendar week is not the same for all people since the enumeration was not completed in 1 week. The occurrence of holidays during the enumeration period probably had no effect on the overall measurement of employment status.

## RESIDENCE 5 YEARS AGO

The data on residence 5 years ago were derived from answers to questionnaire Item 16b, which was asked of the population 5 years old and over. This question asked to report the name of the island, U.S. state, commonwealth, territory, or foreign country of residence on April 1, 1995, for those people who reported in question 16a that they lived in a different house than their current residence. People living in the same area were also asked to report the name of the city, town, or village in which they lived 5 years earlier.

When no information on previous residence was reported for a person, information for other family members, if available, was used to assign a location of residence in 1995. All cases of nonresponse or incomplete response that were not assigned a previous residence based on information from other family members were imputed the previous residence of another person with similar characteristics who provided complete information on residence 5 years earlier.

The tabulation category, "Same house," includes all people 5 years old and over who did not move during the 5 years as well as those who had moved but by Census Day had returned to their 1995 residence. The category, "Different house" in the area includes people who lived in the same area 5 years earlier but lived in a different house or apartment from the one they occupied on Census Day. These movers are then further subdivided according to whether or not they previously lived in the same municipality, county, or district, as their current residence. Selected countries are shown for people who lived outside the area in 1995; people living in countries not shown separately are included in the "Elsewhere" category.

The number of people who were living in a different house 5 years earlier is somewhat less than the total number of moves during the 5 -year period. Some people in the same house at the two dates had moved during the 5 -year period but by the time of the census had returned to their 1995 residence. Other people who were living in a different house had made one or more intermediate moves. For similar reasons, the number of people living in a different municipality, county, or district may be understated.

Comparability. Similar questions were asked for the 1990 census. In 1980, previous residence was not imputed for nonresponse. These people were shown in the category "Residence in 1975 not reported." In the 1970 census, the migration question did not ask for residence in a specific village or island within the area.

## SCHOOL ENROLLMENT AND EMPLOYMENT STATUS

Tabulation of data on school enrollment, educational attainment, and employment status for the population 16 to 19 years old allows for calculating the proportion of people 16 to 19 years old who are not enrolled in school and not high school graduates ("dropouts") and an unemployment rate for the "dropout" population. Definitions of the three topics and descriptions of the census items from which they were derived are presented in "Educational Attainment," "Employment Status," and "School Enrollment and Type of School."

Comparability. The tabulation of school enrollment by employment status is similar to that published in 1980 and 1990 census reports. The 1980 census tabulation included a single data line for armed forces; school enrollment, educational attainment, and employment status data were shown for the civilian population only. In 1970, a tabulation was included for 16 to 21 year old males not attending school.

## SCHOOL ENROLLMENT AND TYPE OF SCHOOL

Data on school enrollment were derived from answers to questionnaire Items 7a and 7b. People were classified as enrolled in school if they reported attending a "regular" public or private school or college at any time between February 1, 2000, and the time of enumeration. The question included instructions to "include only prekindergarten, kindergarten, elementary school, and
schooling which leads to a high school diploma or a college degree" as regular school or college. Respondents who did not answer the enrollment question were assigned the enrollment status and type of school of a person with the same age, sex, and ethnic origin whose residence was in the same or a nearby area.

Public and private school. Public and private school includes people who attended school in the reference period and indicated they were enrolled by marking one of the questionnaire categories for either "public school, public college" or "private school, private college." Schools supported and controlled primarily by a federal, state, or local government are defined as public. Those supported and controlled primarily by religious organizations or other private groups are private.

Comparability. School enrollment questions have been included in the decennial censuses of Guam and American Samoa since 1930; highest grade attended was first asked in 1950 and type of school was first asked in 1960. Questions on school enrollment were first asked in the Commonwealth of the Northern Mariana Islands in 1970. In 1930,the reference period was "since September 1, 1929," in 1940, the reference was to attendance "since March 1"; and in the 1950 and subsequent censuses, the question referred to attendance since "February 1."

Enrollment in the 1930 census included attendance at a school or college of any kind; in the 1940 census, vocational school, extension school, or night school were included if the school was part of the "regular school system." In the 1950 census instructions, the term "regular school" was introduced, and it was defined as schooling which "advances a person towards an elementary or high school diploma or a college, university, or professional school degree." Vocational, trade, or business schools were excluded unless they were graded and considered part of a regular school system. On-the-job training was excluded, as was nursery school and prekindergarten. There has been very little change in the definition since, except the additions of kindergarten in 1960 and prekindergarten in 1970. Instruction by correspondence was excluded unless it was given by a regular school and counted towards promotion. In 1960, the question used the term "regular school or college" and a similar, though expanded, definition of "regular" was included in the instruction, which continued to exclude nursery school. In the 1970 census, the questionnaire included instructions to "count nursery school, kindergarten, and schooling that leads to an elementary school certificate, high school diploma, or college degree."

The age range for which enrollment data have been obtained and published has varied over the censuses. Information on enrollment was recorded for people of all ages in the 1930 and 1940 censuses and 1970 through 2000 censuses; for people under 30 years old in 1950; and for people 5 to 34 years old in 1960. Most of the published enrollment figures referred to people 5 to 20 years old in the 1930 census, 5 to 24 in 1940, 5 to 29 in 1950, 5 to 34 in 1960, 3 to 34 in 1970, and 3 years old and over in 1980 and later years. This growth in the age group whose enrollment was reported reflects increased interest in the number of children in preprimary schools and in the number of older people attending colleges and universities. In the 1950 and subsequent censuses, college students were enumerated where they lived while attending college; whereas, in earlier censuses, they generally were enumerated at their parental homes.

Type of school was first introduced in the 1960 census, where the type of school was incorporated into the response categories for the enrollment question and the terms were changed to "public," "parochial," and "other private." In the 1980 census, "private, church related" and "private, not church related" replaced "parochial" and "other private." In 1990 and 2000, "public" and "private" were used. The instruction guide defines a public school as "any school or college controlled and supported by a local, county, state, or federal government." Schools supported and controlled primarily by religious organizations or other private groups were defined as private. In Census 2000 there was no separate instruction guide. The questionnaire reference book used by enumerators and telephone assistance staff contained these definitions for those who asked questions.

Data on school enrollment also were collected and published by other federal, state, and local government agencies. Where these data were obtained from administrative records of school systems and institutions of higher learning, they were only roughly comparable to data from

B-38
population censuses and household surveys because of differences in definitions and concepts, subject matter covered, time references, and enumeration methods. At the local level, the difference between the location of the institution and the residence of the student may affect the comparability of census and administrative data. Differences between the boundaries of school districts and census geographic units may also affect these comparisons.

## SEX

The data on sex were derived from answers to questionnaire Item 3. Individuals were asked to mark either "male" or "female" to indicate their sex. For most cases in which sex was not reported, it was determined from the person's given (i.e., first) name and household relationship. Otherwise, sex was imputed according to the relationship to the householder and the age of the person. (For more information on imputation, see "Accuracy of the Data.")

Sex ratio. A measure derived by dividing the total number of males by the total number of females, and then multiplying by 100 . This measure is rounded to the nearest tenth.

Comparability. A question on the sex of individuals has been included in every census. Census 2000 was the first time that first name was used for imputation of cases where sex was not reported.

## VETERAN STATUS

Data on veteran status, period of military service, and years of military service were derived from questionnaire Item 22, which was asked of the population 15 years old and over.

Veteran status. The data on veteran status were derived from answers to questionnaire Item 22a. For census data products, a "civilian veteran" is a person 18 years old and over who, at the time of the enumeration, had served on active duty in the U.S. Army, Navy, Air Force, Marine Corps, or Coast Guard in the past (even for a short time), but was not then on active duty, or who had served in the Merchant Marine during World War II. People who had served in the National Guard or Military Reserves were classified as veterans only if they had ever been called or ordered to active duty, not counting the 4 to 6 months for initial training or yearly summer camps. All other civilians 18 years old and over were classified as nonveterans.

Period of military service. People who indicated in questionnaire Item 22a that they had served on active duty in the past (civilian veterans) or were on active duty at the time of enumeration were asked to indicate in Question 22b the period or periods in which they served. People who served in both wartime and peacetime periods are tabulated according to their wartime service.

The responses to the question about period of service were edited for consistency and reasonableness. The edit eliminated inconsistencies between reported period(s) of service and the age of the person; it also removed reported combinations of periods containing unreasonable gaps (for example, it did not accept a response that indicated that the person had served in World War II and in the Vietnam era, but not in the Korean conflict).

Years of military service. People who indicated in questionnaire Item 22a that they had served on active duty in the past (civilian veterans) or were on active duty at the time of enumeration were asked whether they had spent at least 2 years in total on active duty. The question asked for accumulated service (i.e., total service), which is not necessarily the same as continuous service. The years of military service question provides necessary information to estimate the number of veterans that are eligible to receive specific benefits.

Limitation of the data. There may be a tendency for the following kinds of people to report erroneously that they had served on active duty in the armed forces: (a) people who served in the National Guard or Military Reserves, but were never called to active duty; (b) civilian employees or volunteers for the USO, Red Cross, or the Department of Defense (or its predecessors, the Department of War and the Department of the Navy); and (c) employees of the Merchant Marine or

Public Health Service. There is also the possibility that people may have misreported years of service in questionnaire Item 22c because of rounding errors (for example, people with 1 year 8 months of active duty military service may have mistakenly reported " 2 years or more").

Comparability. Since census data on veterans are based on self-reported responses, they may differ from data from other sources, such as administrative records of the Department of Defense and/or the Department of Transportation. Census data also may differ from Department of Veterans Affairs' data on the benefits-eligible population, since criteria for determining eligibility for veterans' benefits differ from the rules for classifying veterans in the census.

The questions and concepts for veterans' data for Census 2000 were essentially the same as those used for the 1990 census, with the following exceptions: (1) the period of military service categories were updated; (2) in an effort to reduce reporting error, the format of the years of military service question was changed from an open-ended one (how many years has...served?) to a closed-ended one (the respondent checked either of two boxes: less than 2 years $/ 2$ years or more); and (3) persons with service during World War II in the Women's Air Forces Service Pilots organization were first counted as veterans in Census 2000, a development that should not appreciably affect 1990-2000 comparability. Both the 2000 and 1990 veteran-status questions represented expanded versions of the corresponding question in the 1980 census, which asked only whether the person was a veteran or not. The expansion was intended to clarify the appropriate response for persons currently in the armed forces and for persons whose only military service was for training in the Reserves or National Guard.

## VOCATIONAL TRAINING

The data on vocational training were derived from responses to questionnaire Item 8b. Vocational training is a school program designed to prepare a person for work in a specific occupational field. People were counted as having completed vocational training if they "completed the requirements for a vocational training program at a trade school, business school, hospital, some other kind of school for occupational training, or place of work."

People who completed a program were asked to report whether the training was in the area in which they lived, "Yes, in this Area" (for example, Guam, if living in Guam; and American Samoa, if living in American Samoa) or outside the area; "Yes, not in this Area."

Comparability. The vocational training question was first asked in the census in 1970. Although the basic question has remained nearly the same, different additional questions were included in each census. In 1970, an additional question was asked about major field of vocational training. In 1980, an additional question asked about the specific type of school. In 1990 and 2000, the respondent was asked where geographically the course was taken ("in this area," "not in this area"). The question was in the U.S. census in 1970 only. In 1990, extensive enumerator instructions described the kinds of training to include and not to include, such as on-the-job training and college level courses. There were no separate instructions in 2000.

## WORK STATUS IN 1999

The data on work status in 1999 were derived from answers to questionnaire Item 32a, which was asked of the population 15 years old and over. People 16 years old and over who worked 1 or more weeks according to the criteria described below are classified as "Worked in 1999." All other people 16 years old and over are classified as "Did not work in 1999." Some earnings tabulations showing work status in 1999 include 15 year olds; these people, by definition, are classified as "Did not work in 1999."

Weeks worked in 1999. The data on weeks worked in 1999 were derived from answers to questionnaire Item 32 b, which was asked of people 15 years old and over who indicated in questionnaire Item 32a that they worked in 1999. The data were tabulated for people 16 years old and over and pertain to the number of weeks during 1999 in which a person did any work for pay or profit (or took paid vacation or paid sick leave) or worked without pay on a family farm or in a family business. Weeks on active duty in the armed forces also are included as weeks worked.

Median weeks worked in 1999. Median weeks worked in 1999 divides the weeks worked distribution into two equal parts: one-half of the cases falling below the median weeks worked and one-half above the median. Median weeks worked in 1999 is computed on the basis of a standard distribution (see the "Standard Distributions" section under "Derived Measures"). Median weeks worked is rounded to the nearest whole number. (For more information on medians, see "Derived Measures.")

Usual hours worked per week in 1999. The data on usual hours worked in 1999 were derived from answers to questionnaire Item 32c. This question was asked of people 15 years old and over who indicated that they worked in 1999 in Question 32a, and the data are tabulated for people 16 years old and over. The respondent was asked to report the number of hours usually worked during the weeks worked in 1999. If their hours varied considerably from week to week during 1999, the respondent was asked to report an approximate average of the hours worked each week. People 16 years old and over who reported that they usually worked 35 or more hours each week are classified as "Usually worked full time"; people who reported that they usually worked 1 to 34 hours each week are classified as "Usually worked part time."

Median usual hours worked per week in 1999. Median usual hours worked per week in 1999 divides the usual hours worked distribution into two equal parts: one-half of the cases falling below the median usual hours worked and one-half above the median. Median usual hours worked per week in 1999 is computed on the basis of a standard distribution (see the "Standard Distributions" section under "Derived Measures"). Median usual hours worked per week is rounded to the nearest whole hour. (For more information on medians, see "Derived Measures.")

Aggregate usual hours worked per week in 1999. The aggregate usual hours worked per week in 1999 is the number obtained by summing across the usual hours worked values of all people who worked in 1999. (Note that there is one usual hours value for each worker, so the number of items summed equals the number of workers.)

Mean usual hours worked per week in 1999. Mean usual hours worked per week is calculated by dividing the aggregate number of usual hours worked per week worked in 1999 by the total number of people who worked in 1999. Mean usual hours worked per week is rounded to the nearest tenth. (For more information on means, see "Derived Measures.")

Full-time, year-round workers. Full-time, year-round workers consists of people 16 years old and over who usually worked 35 hours or more per week for 50 to 52 weeks in 1999. The term "worker" in these concepts refers to people classified as "Worked in 1999" as defined above. The term "worked" in these concepts means "worked one or more weeks in 1999" as defined above under "Weeks Worked in 1999."

Limitation of the data. It is probable that data on the number of people who worked in 1999 and on the number of weeks worked are understated since there was probably a tendency for respondents to forget intermittent or short periods of employment or to exclude weeks worked without pay. There may also have been a tendency for people not to include weeks of paid vacation among their weeks worked, which would result in an underestimate of the number of people who worked " 50 to 52 weeks."

Comparability. The data on weeks worked collected in Census 2000 are comparable with data from the 1960 to 1990 censuses, but may not be entirely comparable with data from the 1940 and 1950 censuses. Starting with the 1960 census, two separate questions have been used to obtain this information. The first identifies people with any work experience during the year and, thus, indicates those people for whom the question about number of weeks worked applies. In 1940 and 1950, the questionnaires contained only a single question on number of weeks worked. In 1970, people responded to the question on weeks worked by indicating one of six weeks-worked intervals. In 1980 and 1990, people were asked to enter the specific number of weeks they worked.

Worker. The terms "worker" and "work" appear in connection with several subjects: employment status, journey-to-work, class of worker, and work status in 1999. Their meaning varies and,
therefore, should be determined by referring to the definition of the subject in which they appear. When used in the concepts "Workers in Family," "Workers in Family in 1999," and "Full-Time, Year-Round Workers," the term "worker" relates to the meaning of work defined for the "Work Status in 1999" subject.

## YEAR OF ENTRY

The data on year of entry were derived from answers to questionnaire Item 12. All people born outside the Pacific Island Areas were asked for the year in which they came to live in the Pacific Island Areas, and if they entered more than once, to provide the year of their latest entry. This includes people born in the United States, Puerto Rico, and other Island Areas (such as the Virgin Islands); people born elsewhere of American parent(s); and the foreign born. (For more information, see "Place of Birth" and "Citizenship Status.")

Limitation of the data. The census question on year of entry was not comparable across enumerated areas (i.e., U.S. stateside, Puerto Rico, the U.S. Virgin Islands, and Pacific Island Areas). Instead of the phrase "to stay," the U.S. stateside and Puerto Rico employed the phrase "to live" to obtain the year in which the person became a resident of the area. Also, the Pacific Island Areas questionnaires instructed respondents to provide the latest year of entry if the person had entered the Pacific Island Areas more than once. These instructions were not included in the U.S. stateside or Puerto Rico questionnaires.

Comparability. The data on this question have been collected since 1990.

## HOUSING CHARACTERISTICS

Contact list: To obtain additional information on these and other Census 2000 subjects, see the list of Census 2000 Contacts on the Internet at http://www.census.gov/contacts/www /c-census2000.html.

## LIVING QUARTERS

Living quarters are either housing units or group quarters. Living quarters are usually found in structures intended for residential use, but also may be found in structures intended for nonresidential use as well as in places such as tents, vans, and emergency and transitional shelters.

Housing unit. A housing unit may be a house, an apartment, a mobile home, a group of rooms, or a single room that is occupied (or, if vacant, is intended for occupancy) as separate living quarters. Separate living quarters are those in which the occupants live separately from any other individuals in the building and that have direct access from outside the building or through a common hall. For vacant units, the criteria of separateness and direct access are applied to the intended occupants whenever possible. If that information cannot be obtained, the criteria are applied to the previous occupants.

Both occupied and vacant housing units are included in the housing unit inventory. Boats, recreational vehicles (RVs), vans, tents, and the like are housing units only if they are occupied as someone's usual place of residence. Vacant mobile homes are included provided they are intended for occupancy on the site where they stand. Vacant mobile homes on dealers' lots, at the factory, or in storage yards are excluded from the housing inventory. Also excluded from the housing inventory are quarters being used entirely for nonresidential purposes, such as a store or an office, or quarters used for the storage of business supplies or inventory, machinery, or agricultural products.

In American Samoa, extended families make use of different types of living arrangements. The enumerators were provided with additional guidelines to help them determine whether the living quarters of the extended family consisted of only one housing unit with various structures, or various housing units. Under one type of living arrangement, the extended family occupied several structures (called fales) where the members of the extended family live. If the family members eat most of their meals together in one of these houses (fales), then all of the houses (fales) combined constitute one housing unit. However, if some or all of the family members eat their meals separately in their own structure (house, fale), those family members live in separate living quarters and each of the structures they occupy is considered to be a separate unit. (For more information, see the discussion under "Households by Number of Structures Occupied.")

Occupied housing unit. A housing unit is classified as occupied if it is the usual place of residence of the person or group of people living in it at the time of enumeration, or if the occupants are only temporarily absent; that is, away on vacation or business. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated people who share living quarters.

Occupied rooms or suites of rooms in hotels, motels, and similar places are classified as housing units only when occupied by permanent residents; that is, people who consider the hotel as their usual place of residence or have no usual place of residence elsewhere. If any of the occupants in rooming or boarding houses, congregate housing, or continuing care facilities live separately from others in the building and have direct access, their quarters are classified as separate housing units. The living quarters occupied by staff personnel within any group quarters are separate housing units if they satisfy the housing unit criteria of separateness and direct access; otherwise, they are considered group quarters.

Vacant housing unit. A housing unit is vacant if no one is living in it at the time of enumeration, unless its occupants are only temporarily absent. Units temporarily occupied at the time of enumeration entirely by people who have a usual residence elsewhere are classified as
vacant. New units not yet occupied are classified as vacant housing units if construction has reached a point where all exterior windows and doors are installed and final usable floors are in place. Vacant units are excluded from the housing inventory if they are open to the elements; that is, the roof, walls, windows, and/or doors no longer protect the interior from the elements. Also excluded are vacant units with a sign that they are condemned or they are to be demolished.

Comparability. Since 1990, two changes have been made to the housing unit definition.
The first change eliminated the concept of "eating separately." The elimination of the eating criterion makes the housing unit definition more comparable to the United Nations' definition of a housing unit that stresses the entire concept of separateness rather than the specific "eating" element. Although the "eating separately" criterion was previously included in the definition of a housing unit, the data collected did not actually allow one to distinguish whether the occupants ate separately from any other people in the building. (Questions that asked households about their eating arrangements have not been included in the census since 1970.) Therefore, the current definition better reflects the information that is used in the determination of a housing unit.

The second change for Census 2000 eliminated the "number of nonrelatives" criterion; that is, "nine or more people unrelated to the householder" which converted housing units to group quarters. This change was prompted by the following considerations: (1) there were relatively few such conversions in 1990; (2) household relationship and housing data were lost by converting these housing units to group quarters; and (3) there was no empirical support for establishing a particular number of nonrelatives as a threshold for these conversions.

In 1960, 1970, and 1980, vacant rooms in hotels, motels, and other similar places where 75 percent or more of the accommodations were occupied by permanent residents were counted as part of the housing inventory. We intended to classify these vacant units as housing units in the 1990 census. However, an evaluation of the data collection procedures prior to the 1990 census indicated that the concept of permanency was a difficult and confusing procedure for enumerators to apply correctly. Consequently, in the 1990 census, vacant rooms in hotels, motels, and similar places were not counted as housing units. In Census 2000, we continued the procedure adopted in 1990.

## AIR CONDITIONING

The data on air conditioning were obtained from answers to questionnaire Item 44, which was asked at both occupied and vacant housing units. Air conditioning is defined as the cooling of air by a refrigeration unit. It does not include evaporative coolers, fans, or blowers that are not connected to a refrigeration unit; however, it does include heat pumps. A central system is an installation that air conditions a number of rooms. In an apartment building, each apartment may have its own central system, or there may be several systems, each providing central air conditioning for a group of apartments. A central system with individual room controls is a "central air-conditioning system." A "room unit" is an individual air conditioner that is installed in a window or an outside wall and is generally intended to cool one room, although it may sometimes be used to cool more than one room.

Comparability. Data on air conditioning were collected for the first time in 1980 and were shown only for year-round housing units. Year-round housing units were all occupied units plus vacant units available or intended for year-round use. Vacant units intended for seasonal occupancy and migratory laborers were excluded. Since 1990, data have been shown for all housing units.

## BATHTUB OR SHOWER

The data on bathtub or shower were obtained from answers to questionnaire Item 41 b , which was asked at both occupied and vacant housing units. A housing unit had a bathtub or shower only if the equipment was permanently connected to piped running water. Portable bathtubs were not included in the bathtub or shower category.

Comparability. In Guam, data on bathtub or shower were collected for the first time in 1960, and since 1970 for all other Pacific Island Areas. In 1980, the data were shown separately as well as combined with data on water supply and flush toilet to identify the presence of complete plumbing facilities.

## BATTERY OPERATED RADIO

The data on battery operated radios were obtained from answers to questionnaire Item 46, which was asked at occupied housing units. Included as battery operated radios are car radios, transistors, and other battery operated sets in working order or needing only a new battery for operation.

Comparability. Data on battery operated radios were collected for the first time in 1980. However, in 1990, data on radios included all types of radio sets, either electric or battery operated. Since 1990, only battery operated radios were considered.

## BEDROOMS

The data on bedrooms were obtained from answers to questionnaire Item 40, which was asked at both occupied and vacant housing units. The number of bedrooms is the count of rooms designed to be used as bedrooms; that is, the number of rooms that would be listed as bedrooms if the house, apartment, or mobile home were on the market for sale or for rent. Included are all rooms intended to be used as bedrooms even if they currently are being used for some other purpose. A housing unit consisting of only one room, such as a one-room efficiency apartment (or also a fale in American Samoa), is classified, by definition, as having no bedroom.

Comparability. In Guam, data for bedrooms were collected for the first time in 1960, and since 1980 for the other Pacific Island Areas. In 1980, data for bedrooms were shown only for year-round units. Year-round housing units are all occupied units plus vacant units available or intended for year round use. Vacant units intended for seasonal occupancy and migratory laborers are excluded. Since 1990, these data are shown for all housing units. In the 1960 and 1980 censuses, a room was defined as a bedroom if it was used mainly for sleeping even if it also was used for other purposes. Rooms that were designed to be used as bedrooms but used mainly for other purposes were not considered to be bedrooms. Since 1990, the definition counts rooms designed to be used as bedrooms. In 1970, no data were collected on bedrooms for any of the Pacific Island Areas. A distribution of housing units by number of bedrooms calculated from data collected in a 1986 stateside test showed virtually no differences in the data obtained from the two versions of the definition except in the two bedroom category, where the previous "use" definition showed only a slightly lower proportion of units.

## BUSINESS ON PROPERTY

The data for business on property were obtained from answers to questionnaire Item 53, which was asked at occupied and vacant 1 -family houses and mobile homes. This question is used to exclude owner-occupied, 1-family houses with business or medical offices on the property from certain statistics on financial characteristics.

A business must be easily recognizable from the outside. It usually will have a separate outside entrance and have the appearance of a business, such as a grocery store, restaurant, or barber shop. It may be either attached to the house or mobile home or be located elsewhere on the property. Those housing units in which a room is used for business or professional purposes and have no recognizable alterations to the outside are not considered to have a business. Medical offices are considered businesses for tabulation purposes.

Comparability. In Guam, data on business on property were collected for the first time in 1960, and since 1970 for all other Pacific Island Areas.

## CONDOMINIUM FEE

The data on condominium fee were obtained from answers to questionnaire Item 61, which was asked at owner-occupied condominiums. A condominium fee normally is charged monthly to the owners of individual condominium units by the condominium owners' association to cover
operating, maintenance, administrative, and improvement costs of the common property (grounds, halls, lobby, parking areas, laundry rooms, swimming pool, etc.). The costs for utilities and/or fuels may be included in the condominium fee if the units do not have separate meters.

Data on condominium fees may include real estate taxes and/or insurance payments for the common property, but do not include real estate taxes or fire, hazard, typhoon, and flood insurance for the individual unit already reported in questionnaire Items 58 and 59. Amounts reported were the regular monthly payment even if paid by someone outside the household or if they remain unpaid. Costs were estimated as closely as possible when exact costs were not known.

The data from this item were added to payments for mortgages (both first, second, home equity loans, and other junior mortgages); real estate taxes; fire, hazard, typhoon, and flood insurance payments; and utilities and fuels to derive "Selected Monthly Owner Costs" and "Selected Monthly Owner Costs as a Percentage of Household Income in 1999" for condominium owners.

Comparability. In Guam and the Commonwealth of the Northern Mariana Islands, data on condominium fee have been collected since 1990. In American Samoa, the condominium fee question was collected for the first time in 2000.

## CONDOMINIUM STATUS

The data on condominium housing units were obtained from answers to questionnaire Item 49, which was asked at both occupied and vacant housing units. Condominium is a type of ownership that enables a person to own an apartment or house in a development of similarly owned units and to hold a common or joint ownership of some or all of the common areas as facilities, such as land, the roof, hallways, entrances, elevators, a swimming pool, etc. Condominiums may be single-family houses or units in apartment buildings. A condominium unit need not be occupied by the owner to be counted as such. A unit classified as "mobile home," "container," or "boat, RV, van, etc.," cannot be a condominium unit. (See discussion on "Units in Structure.")

Limitation of the data. Testing done in the United States prior to the 1980 and 1990 censuses indicated that the number of condominiums may be slightly overstated. The same situation may also be true for these Pacific Island Areas.

Comparability. In Guam and the Commonwealth of the Northern Mariana Islands, data on condominium status have been collected since 1990. In American Samoa, the condominium status question was collected for the first time in 2000.

## CONTRACT RENT

The data on contract rent (also referred to as "rent asked" for vacant units) were obtained from answers to questionnaire Item 55, which was asked at occupied housing units that were rented for cash rent and vacant housing units that were for rent at the time of enumeration.

Housing units that are renter occupied without payment of cash rent are shown separately as "No cash rent" in census data products. The unit may be owned by friends or relatives who live elsewhere and who allow occupancy without charge. Rent-free houses or apartments may be provided to compensate caretakers, ministers, tenant farmers, sharecroppers, or others.

Contract rent is the monthly rent agreed to or contracted for, regardless of any furnishings, utilities, fees, meals, or services that may be included. For vacant units, it is the monthly rent asked for the rental unit at the time of enumeration.

If the contract rent includes rent for a business unit or for living quarters occupied by another household, only that part of the rent estimated to be for the respondent's unit was included. Excluded was any rent paid for additional units or for business premises.

If a renter pays rent to the owner of a condominium or cooperative, and the condominium fee or cooperative carrying charge also is paid by the renter to the owner, the condominium fee or carrying charge was included as rent.

If a renter receives payments from lodgers or roomers who are listed as members of the household, the rent without deduction for any payments received from the lodgers or roomers was to be reported. The respondent was to report the rent agreed to or contracted for even if paid by someone else such as friends or relatives living elsewhere, a church or welfare agency, or the government through subsidies or vouchers.

Median and quartile contract rent. The median divides the rent distribution into two equal parts, one-half of the cases falling below the median contract rent and one-half above the median. Quartiles divide the rent distribution into four equal parts. Median and quartile contract rent are computed on the basis of a standard distribution (see the "Standard Distributions" section under "Derived Measures"). In computing median and quartile contract rent, units reported as "No cash rent" are excluded. Median and quartile rent calculations are rounded to the nearest whole dollar. Upper and lower quartiles can be used to note large rent differences among various geographic areas. (For more information on medians and quartiles, see "Derived Measures.")

Aggregate contract rent. Aggregate contract rent is calculated by adding all of the contract rents for occupied housing units in an area. Aggregate contract rent is subject to rounding, which means that all cells in a matrix are rounded to the nearest hundred dollars. (For more information, see "Rounding" or "Aggregate" under "Derived Measures.")

Limitation of the data. In previous censuses, including 1980 and 1990, contract rent for vacant units had high allocation rates.

Comparability. In Guam, data on contract rent were collected for the first time in 1960, and since 1970 for all other Pacific Island Areas.

In Census 2000, respondents wrote in the contract rent amount. In previous decennial censuses, respondents marked the appropriate contract rent box shown as ranges on the questionnaire.

## COOKING FACILITIES

The data on cooking facilities were obtained from answers to questionnaire Items 42a and 42b, which were asked at both occupied and vacant housing units. Main cooking facilities are the ones that are used most for preparation of meals. They can be located either inside or outside the building. Cooking facilities are classified as (1) electric stove; (2) kerosene stove; (3) gas stove; (4) microwave oven and nonportable burners; (5) microwave oven only; (6) other, depending upon the type of stove used for cooking. The category "Other" includes a hotplate, fireplace, or any other type of cooking facility not listed separately. "No cooking facilities" includes those units with no cooking facilities available either inside or outside the building.

Comparability. In Guam, data on cooking facilities were collected for the first time in 1960, and since 1970 for all other Pacific Island Areas. In 1980, the data for cooking facilities were shown for year-round and occupied housing units. Since 1990, data are shown for all housing units.

## GROSS RENT

The data on gross rent were obtained from answers to questionnaire Items 54a-d and 55. Gross rent is the contract rent plus the estimated average monthly cost of utilities (electricity, gas, water and sewer) and fuels (oil, coal, kerosene, wood, etc.) if these are paid by the renter (or paid for the renter by someone else). Gross rent is intended to eliminate differentials that result from varying practices with respect to the inclusion of utilities and fuels as part of the rental payment. Rental units occupied without payment of cash rent are shown separately as "No cash rent" in the tabulations.

Median gross rent. Median gross rent divides the gross rent distribution into two equal parts, one-half of the cases falling below the median gross rent and one-half above the median. Median gross rent is computed on the basis of a standard distribution (see the "Standard Distributions" section under "Derived Measures"). Median gross rent is rounded to the nearest whole dollar. (For more information on medians, see "Derived Measures.")

Aggregate gross rent. Aggregate gross rent is calculated by adding together all the gross rents for all occupied housing units in an area. Aggregate gross rent is rounded to the nearest hundred dollars. (For more information, see "Rounding" or "Aggregate" under "Derived Measures.")

Comparability. In Guam, data on gross rent were collected for the first time in 1960. Only contract rent was collected for all Pacific Island Areas in 1970. Data on gross rent have been collected since 1980 for all Pacific Island Areas.

## GROSS RENT AS A PERCENTAGE OF HOUSEHOLD INCOME IN 1999

Gross rent as a percentage of household income in 1999 is a computed ratio of monthly gross rent to monthly household income (total household income in 1999 divided by 12). The ratio is computed separately for each unit and is rounded to the nearest whole percentage. Units for which no cash rent is paid and units occupied by households that reported no income or a net loss in 1999 comprise the category "Not computed."

Median gross rent as a percentage of household income in 1999. This measure divides the gross rent as a percentage of household income distribution into two equal parts, one-half of the cases falling below the median gross rent as a percentage of household income and one-half above the median. Median gross rent as a percentage of household income is computed on the basis of a standard distribution (see the "Standard Distributions" section under "Derived Measures"). Median selected gross rent as a percentage of household income is rounded to the nearest whole tenth. (For more information on medians, see "Derived Measures.")

## HOUSEHOLD SIZE

This item is based on the count of people in occupied housing units. All people occupying the housing unit are counted, including the householder, occupants related to the householder, and lodgers, roomers, boarders, and so forth. For data products based on population data, "household size" is the number of people in households.

Average household size of occupied unit. A measure obtained by dividing the number of people living in occupied housing units by the number of occupied housing units.

Average household size of owner-occupied unit. A measure obtained by dividing the number of people living in owner-occupied housing units by the number of owner-occupied housing units.

Average household size of renter-occupied unit. A measure obtained by dividing the number of people living in renter-occupied housing units by the number of renter-occupied housing units.

## HOUSEHOLDS BY NUMBER OF STRUCTURES OCCUPIED

The data on households by number of structures occupied were obtained from answers to questionnaire Item 36, categories 4 and 5 , which were only asked at both occupied and vacant housing units in American Samoa. This item is included to identify the traditional Samoan extended family living arrangement where household members may occupy more than one structure (sometimes referred to as fales). The category "Two houses" includes those living quarters consisting of 2 structures, both of which are occupied by only one household. The category "Three or more houses" includes those living quarters consisting of 3 or more structures all of which are occupied by only one household.

Comparability. Data on number of structures occupied were collected for the first time in 1990.

## INSURANCE FOR FIRE, HAZARD, TYPHOON, AND FLOOD

The data on fire, hazard, typhoon, and flood insurance were obtained from answers to questionnaire Item 59, which was asked at owner-occupied one-family houses, condominiums, and mobile homes. The statistics for this item refer to the annual premium for fire, hazard,
typhoon, and flood insurance on the property (land and buildings); that is, policies that protect the property and its contents against loss due to damage by fire, lightning, winds, hail, flood, explosion, and so on. In American Samoa, the statistics refer to the annual premium for fire, hazard, typhoon, and flood insurance on the building only.

Liability policies are included only if they are paid with the fire, hazard, typhoon, and flood insurance premiums and the amounts for fire, hazard, typhoon, and flood cannot be separated. Premiums are reported even if they have not been paid or are paid by someone outside the household. When premiums are paid on other than an annual basis, the premiums are converted to an annual basis.

The payment for fire, hazard, typhoon, and flood insurance is added to payments for real estate taxes, utilities, fuels, and mortgages (both first, second, home equity loans, and other junior mortgages) to derive "Selected Monthly Owner Costs" and "Selected Monthly Owner Costs as a Percentage of Household Income in 1999."

A separate questionnaire Item (56d) determines whether insurance premiums are included in the mortgage payment to the lender(s). This makes it possible to avoid counting these premiums twice in the computations.

Comparability. Data on payment for fire and hazard insurance were collected for the first time in 1980. Flood and typhoon insurance was not specifically mentioned in the wording of the question in 1980. In 1990, the question was modified to include flood insurance and in 2000 the question was further modified to include typhoon insurance. The question was asked at 1-family, owner-occupied houses; mobile homes; and condominiums. In Census 2000, the question was asked at all owner-occupied housing units.

## KITCHEN FACILITIES

The data on kitchen facilities were obtained from answers to questionnaire Items 42a, 42b, 42c, and 42d, which were asked at both occupied and vacant housing units. A unit has complete kitchen facilities when cooking facilities (electric, kerosene, or gas stove, microwave oven and nonportable burners, or cookstove), refrigerator, and a sink with piped water are located in the same building as the unit being enumerated. They need not be in the same room. Lacking complete kitchen facilities includes those conditions when all three specified kitchen facilities are present, but the equipment is located in a different building, unless the building is a fale that together with other fales constitute one housing unit (as in American Samoa); some but not all of the facilities are present; or none of the three specified kitchen facilities are present in the same building as the living quarters being enumerated. A housing unit having only a microwave or portable heating equipment, such as a hot plate or camping stove, should not be considered as having complete kitchen facilities. An ice box is not considered to be a refrigerator.

Comparability: The data on complete kitchen facilities were collected for the first time in 1970. In 1970 and 1980, data for kitchen facilities were shown only for year-round units. Since 1990, data are shown for all housing units. In 2000, the category "Yes, gas" and "Yes, electric" for refrigerator was merged into one response of "Yes." Therefore, there is no type of distinction in the type of refrigerator in 2000.

## MORTGAGE PAYMENT

The data on mortgage payment were obtained from answers to questionnaire Item 56 b , which was asked at owner-occupied housing units. Questionnaire Item 56b provides the regular monthly amounts required to be paid to the lender for the first mortgage (deed of trust, contract to purchase, or similar debt) on the property. Amounts are included even if the payments are delinquent or paid by someone else. The amounts reported are included in the computation of "Selected Monthly Owner Costs" and "Selected Monthly Owner Costs as a Percentage of Household Income in 1999" for units with a mortgage.

The amounts reported include everything paid to the lender including principal and interest payments; real estate taxes; fire, hazard, typhoon, and flood insurance payments; and mortgage insurance premiums. Separate questions determine whether real estate taxes and fire, hazard, typhoon, and flood insurance payments are included in the mortgage payment to the lender. This makes it possible to avoid counting these components twice in the computation of "Selected Monthly Owner Costs."

Comparability. In Guam and the Commonwealth of the Northern Mariana Islands, information on mortgage payment was collected for the first time in 1980. It was collected only at owner-occupied, 1-family houses. Excluded were mobile homes, condominiums, houses with a business or medical office on the property, and houses in multiunit buildings. In Census 2000, the question was asked at all owner-occupied housing units.

The 1980 census obtained total regular monthly mortgage payments, including payments on second or other junior mortgages, from a single question. Beginning in 1990, two questions were asked; one for regular monthly payments on first mortgages, and one for regular monthly payments on second mortgages, home equity loans, and other junior mortgages. (For more information, see "Second or Junior Mortgage or Home Equity Loan.")

In American Samoa, information on mortgage payment was collected for the first time in 1990.

## MORTGAGE STATUS

The data on mortgage status were obtained from answers to questionnaire Items 56a and 57a, which were asked at owner-occupied housing units. "Mortgage" refers to all forms of debt where the property is pledged as security for repayment of the debt. It includes such debt instruments as deeds of trust; trust deeds; contracts to purchase; land contracts; second, third, etc., mortgages; and home equity loans.

A mortgage is considered a first mortgage if it has prior claim over any other mortgage or if is the only mortgage on the property. All other mortgages, (second, third, etc.) are considered junior mortgages. A home equity loan is generally a junior mortgage. If no first mortgage is reported, but a junior mortgage or home equity loan is reported, then the loan is considered a first mortgage.

In most census data products, the tabulations for "Selected Monthly Owner Costs" and "Selected Monthly Owner Costs as a Percentage of Household Income in 1999" usually are shown separately for units "with a mortgage" and for units "not mortgaged." The category "not mortgaged" is comprised of housing units owned free and clear of debt.

Comparability. In Guam and the Commonwealth of the Northern Mariana Islands, information on mortgage status was collected for the first time in 1980. It was collected only at owner-occupied one-family houses. Excluded were mobile homes, condominiums, houses with a business or medical office on the property, and houses in multiunit buildings. In Census 2000, the question was asked at all owner-occupied housing units. In addition, the mortgage status question distinguished between the presence of a second mortgage and a home equity loan.

In American Samoa, information on mortgage status was collected for the first time in 1990.

## OCCUPANTS PER ROOM

"Occupants per room" is obtained by dividing the number of people in each occupied housing unit by the number of rooms in the unit. The figures show the number of occupied housing units having the specified ratio of people per room. Occupants per room is rounded to the nearest hundredth.

Mean occupants per room. This is computed by dividing occupants in housing units by the aggregate number of rooms. This is intended to provide a measure of utilization or crowding. A higher mean may indicate a greater degree of utilization or crowding; a low mean may indicate under utilization. Mean occupants per room is rounded to the nearest hundredth. (For more information on means, see "Derived Measures.")

## PLUMBING FACILITIES

The data on plumbing facilities were obtained from answers to questionnaire Items $41 \mathrm{a}, 41 \mathrm{~b}$, and 41 c , which were asked at both occupied and vacant housing units. In Guam only, a unit has complete plumbing facilities when piped water (either hot or cold), a flush toilet, and a bathtub or shower are located in the unit being enumerated. Lacking complete plumbing facilities includes those conditions when all three facilities are present but the equipment is located outside the unit, or when some but not all of the facilities is present, or none of the facilities is present. In the Commonwealth of the Northern Mariana Islands and American Samoa, a unit has complete plumbing facilities when the same three facilities are present but they may be either in the unit being enumerated or inside the building in which the unit is located.

Comparability. In Guam, the data on plumbing facilities were tabulated for the first time in 1960, and since 1970 for the other Pacific Island Areas. In 1970 and 1980, the data were shown only for year-round housing units. In 1980, plumbing was considered to be complete if all three facilities were located in the same building as the unit being enumerated, for all areas. Since 1990, these facilities must be located in the unit being enumerated for Guam only and data are shown for all housing units.

## POPULATION IN OCCUPIED UNITS

The data shown for population in occupied units is the total population minus any people living in group quarters. All people occupying the housing unit are counted, including the householder, occupants related to the householder, and lodgers, roomers, boarders, and so forth. (For more information, see "Living Quarters.")

Average household size of occupied unit. A measure obtained by dividing the number of people living in occupied housing units by the number of occupied housing units.

Average household size of owner-occupied unit. A measure obtained by dividing the number of people living in owner-occupied housing units by the number of owner-occupied housing units.

Average household size of renter-occupied unit. A measure obtained by dividing the number of people living in renter-occupied housing units by the number of renter-occupied housing units.

## POVERTY STATUS OF HOUSEHOLDS IN 1999

The data on poverty status of households were derived from answers to the income questions.
Since poverty is defined at the family level and not the household level, the poverty status of the household is determined by the poverty status of the householder. Households are classified as poor when the total 1999 income of the householder's family is below the appropriate poverty threshold. (For nonfamily householders, their own income is compared with the appropriate threshold.) The income of people living in the household who are unrelated to the householder is not considered when determining the poverty status of a household, nor does their presence affect the family size in determining the appropriate threshold. The poverty thresholds vary depending upon three criteria: size of family, number of children, and, for 1-and 2-person families, age of the householder.

Poverty thresholds for the United States are computed on a national basis only. No attempt has been made to adjust thresholds for regional, state, or local variations in the cost of living. The thresholds used for Guam, the Commonwealth of the Northern Mariana Islands, and American Samoa are the same as those used for the United States. (For more information, see "Poverty Status in 1999" and "Income in 1999" under Population Characteristics.)

## REAL ESTATE TAXES

The data on real estate taxes were obtained from answers to questionnaire Item 58 , which was asked at owner-occupied housing units. The statistics from this question refer to the total amount of all real estate taxes on the entire property (land and buildings) payable in 1999 to all taxing jurisdictions, including special assessments, school taxes, county taxes, and so forth.

Real estate taxes include state, local, and all other real estate taxes even if delinquent, unpaid, or paid by someone who is not a member of the household. However, taxes due from prior years are not included. If taxes are not paid on a yearly basis, the payments are converted to a yearly basis.

The payment for real estate taxes is added to payments for fire, hazard, typhoon, and flood insurance; utilities and fuels; and mortgages (both first, second, home equity loans, and other junior mortgages) to derive "Selected Monthly Owner Costs" and "Selected Monthly Owner Costs as a Percentage of Household Income in 1999." A separate question (56c) determines whether real estate taxes are included in the mortgage payment to the lender(s). This makes it possible to avoid counting taxes twice in the computations.

Comparability. In Guam and the Commonwealth of the Northern Mariana Islands, information on real estate taxes was collected for the first time in 1980. It was collected only at owner-occupied one-family houses. Excluded were mobile homes condominiums, houses with a business for medical office on the property, and houses in multiunit buildings. In Census 2000, the question was asked at all owner-occupied housing units.

In American Samoa, information on real estate taxes was collected for the first time in 2000.

## REFRIGERATOR

The data on refrigerators were obtained from answers to questionnaire Item 42c, which was asked at both occupied and vacant housing units. The refrigerator may be located in the housing unit or in a kitchen elsewhere in the building where the house is located. The category "No" refrigerator consists of units utilizing any type of cooling system other than an electric or gas refrigerator, or units that do not have a refrigerator.

Comparability. In Guam, the data on refrigerators were collected for the first time in 1960 and since 1970 for the other Pacific Island Areas. In 1980, the data were shown only for occupied housing units. Since 1990, the data are shown for all housing units and the question asking if the refrigerator was gas or electric was dropped from the questionnaire.

## ROOMS

The data on rooms were obtained from answers to questionnaire Item 39, which was asked at both occupied and vacant housing units. The statistics on rooms are in terms of the number of housing units with a specified number of rooms. The intent of this question is to count the number of whole rooms used for living purposes.

For each unit, rooms include living rooms, dining rooms, kitchens, bedrooms, finished recreation rooms, enclosed porches suitable for year-round use, and lodgers' rooms. Excluded are kitchenettes, strip or pullman kitchens, bathrooms, open porches, balconies, halls or foyers, half-rooms, utility rooms, unfinished attics or basements, or other unfinished space used for storage. A partially divided room is a separate room only if there is a partition from floor to ceiling, but not if the partition consists solely of shelves or cabinets.

For households in American Samoa that occupy two or more structures, a vacant fale intended to be occupied by guests is considered to be a room of the Matai's fale. The Matai is the highest ranking person in the family.

Median rooms. This measure divides the room distribution into two equal parts, one-half of the cases falling below the median number of rooms and one-half above the median. In computing median rooms, the whole number is used as the midpoint of the interval; thus, the category " 3 rooms" is treated as an interval ranging from 2.5 to 3.5 rooms. Median rooms is rounded to the nearest tenth. (For more information on medians, see "Derived Measures.")

Aggregate rooms. To calculate aggregate rooms, an arbitrary value of " 10 " is assigned to rooms for units falling within the terminal category, "9 or more." (For more information on aggregates and means, see "Derived Measures.")

Comparability. The data on rooms were collected for the first time in 1970. In 1970 and 1980, these data were shown only for year-round housing units. Since 1990, these data are shown for all housing units.

## SECOND OR JUNIOR MORTGAGE PAYMENT OR HOME EQUITY LOAN

The data on second mortgage or home equity loan payments were obtained from answers to questionnaire Items 57a and 57b, which were asked at owner-occupied housing units. Question 57a asks whether a second mortgage or a home equity loan exists on the property. Question 57b asks for the regular monthly amount required to be paid to the lender on all junior mortgages and home equity loans. Amounts are included even if the payments are delinquent or paid by someone else. The amounts reported are included in the computation of "Selected Monthly Owner Costs" and "Selected Monthly Owner Costs as a Percentage of Household Income in 1999" for units with a mortgage.

All mortgages other than first mortgages (for example, second, third, etc.) are classified as "junior" mortgages. A second mortgage is a junior mortgage that gives the lender a claim against the property that is second to the claim of the holder of the first mortgage. Any other junior mortgage(s) would be subordinate to the second mortgage. A home equity loan is a line of credit available to the borrower that is secured by real estate. It may be placed on a property that already has a first or second mortgage, or it may be placed on a property that is owned free and clear.

If the respondents answered that no first mortgage existed, but a second mortgage or a home equity loan did, a computer edit assigned the unit a first mortgage and made the first mortgage monthly payment the amount reported in the second mortgage. The second mortgage/home equity loan data were then made "No" in question 57 a and blank in question 57 b.

Comparability. The 1980 census obtained total regular monthly mortgage payments, including payments on second or junior mortgages, from one single question. Beginning in 1990, two questions were used: one for regular monthly payments on first mortgages, and one for regular monthly payments on second or junior mortgages and home equity loans.

The 1990 census did not allow respondents to distinguish between a second mortgage or a home equity loan. In Census 2000, question 57a allows the respondent to choose multiple answers, thereby identifying the specific type of second mortgage. In 1990, the second or junior mortgage questions were asked at 1 -family, owner-occupied housing units; mobile homes; and condominiums. In Census 2000, the question was asked at all owner-occupied housing units. In addition, the second mortgage payment question distinguished between the presence of a second mortgage or home equity loan.

## SELECTED MONTHLY OWNER COSTS

The data on selected monthly owner costs were obtained from answers to questionnaire Items $54 a-d, 56 b, 57 b, 58,59$, and 61 at owner-occupied housing units. Selected monthly owner costs is the sum of payments for mortgages, deeds of trust, contracts to purchase, or similar debts on the property (including payments for the first mortgage, second mortgage, home equity loans, and other junior mortgages); real estate taxes; fire, hazard, typhoon, and flood insurance on the property; utilities (electricity, gas, and water and sewer); and fuels (oil, coal, kerosene, wood, etc.). It also includes, where appropriate, the monthly condominium fee for condominiums.

Specified owner-occupied housing units. In certain tabulations, selected monthly owner costs are presented separately for specified owner-occupied housing units (owner-occupied, one-family houses without a business or medical office on the property). Data usually are shown separately for units "with a mortgage" and for units "not mortgaged."

Median selected monthly owner costs. This measure divides the selected monthly owner costs distribution into two equal parts, one-half of the cases falling below the median selected monthly owner costs and one-half above the median. Medians are shown separately for units
"with a mortgage" and for units "not mortgaged." Median selected monthly owner costs is computed on the basis of a standard distribution (see the "Standard Distributions" section under "Derived Measures"). Median selected monthly owner costs is rounded to the nearest whole dollar. (For more information on medians, see "Derived Measures.")

Aggregate selected monthly owner costs. Aggregate selected monthly owner costs is calculated by adding together all the selected monthly owner costs for all occupied housing units in an area. Aggregate selected monthly owner costs is subject to rounding, which means that all cells in a matrix are rounded to the nearest hundred dollars. (For more information, see "Rounding" or "Aggregate" under "Derived Measures.")

Comparability. In Guam and the Commonwealth of the Northern Mariana Islands, the components of selected monthly owners costs were collected for the first time in 1980. In American Samoa, it was collected for the first time in 1990. It was collected only at owner-occupied one-family houses. Excluded were mobile homes, condominiums, houses with a business or medical office on the property, and houses in multiunit buildings. In Census 2000, the component questions were asked at all owner-occupied housing units and also shown for all owner-occupied housing units.

## SELECTED MONTHLY OWNER COSTS AS A PERCENTAGE OF HOUSEHOLD INCOME IN 1999

The information on selected monthly owner costs as a percentage of household income in 1999 is the computed ratio of selected monthly owner costs to monthly household income in 1999. The ratio was computed separately for each unit and rounded to the nearest hundredth percent. The data are tabulated separately for specified owner-occupied units.

Separate distributions are often shown for units "with a mortgage" and for units "not mortgaged." Units occupied by households reporting no income or a net loss in 1999 are included in the "not computed" category. (For more information, see "Selected Monthly Owner Costs.")

Median selected monthly owner costs as a percentage of household income. This measure divides the selected monthly owner costs as a percentage of household income distribution into two equal parts, one-half of the cases falling below the median selected monthly owner costs as a percentage of household income and one-half above the median. Median selected monthly owner costs as a percentage of household income is computed on the basis of a standard distribution (see the "Standard Distributions" section under "Derived Measures"). Median selected monthly owner costs as a percentage of household income is rounded to the nearest tenth. (For more information on medians, see "Derived Measures.")

## SEWAGE DISPOSAL

The data on sewage disposal were obtained from answers to questionnaire Item 48, which was asked at both occupied and vacant housing units. Housing units are either connected to a public sewer, to a septic tank or cesspool, or they dispose of sewage by other means. A public sewer may be operated by a government body or by a private organization. A housing unit is considered to be connected to a septic tank or cesspool when the unit is provided with an underground pit or tank for sewage disposal. The category "Other means" included housing units which dispose of sewage some other way.

Comparability. The data on sewage disposal were collected for the first time in 1980 and were shown only for year-round housing units. Since 1990, data are shown for all housing units.

## SINK WITH PIPED WATER

The data on sink with piped water were obtained from answers to questionnaire Item 42d, which was asked at both occupied and vacant housing units. A sink with piped water must be inside the building where the housing unit being enumerated is located for the unit to be classified as having a sink with piped water.

Comparability. The data on sink with piped water were collected for the first time in 1990.

## SOURCE OF WATER

The data on source of water were obtained from answers to questionnaire Item 47, which was asked at both occupied and vacant housing units. Housing units may receive their water supply from a number of sources. The source may be in the building, in some other place on the property, or elsewhere. A common source supplying water through underground piped to five or more units is classified as "A public system only." The water may be supplied by a municipal water system, water district, water company, etc., or it may be obtained from a well which supplies water to five or more housing units. A source of water may be "A public system and catchment" if there is running water which comes from a public system and a catchment is also used. If the water is supplied from a well on the property or a neighboring property serving 4 or fewer housing units, the units are classified as having water supplied by "An individual well." Well water that is hand drawn, wind drawn, or engine drawn; piped or not piped; stored in tanks or used directly from the well is included. A source of water may be "A catchment, tanks, or drums only" if the only source of water is a catchment, tanks, or drums, in which rainwater is collected. The category "Some other source" includes water obtained privately from standpipes, springs, rivers, irrigation canals, creeks, or other sources not listed.

In American Samoa only, there may be village water systems. "A village water system only" is defined as running water supplied through underground pipes by a village water system or as water supplied by a well that is maintained by the village.

Comparability The data on source of water were collected for the first time in 1970. In 1970 and 1980, data were shown only for year-round housing units. Since 1990, data are shown for all housing units. In 2000, the category "A public standpipe or steel hydrant" was deleted as a response category from the questionnaire.

## TELEPHONE SERVICE AVAILABLE

The data on telephones were obtained from answers to questionnaire Item 43, which was asked at occupied housing units. A telephone must be in working order and service available in the house, apartment, or mobile home that allows the respondent both to make and receive calls. Households whose service has been discontinued for nonpayment or other reasons are not counted as having telephone service available.

Comparability. The data on telephones were collected for the first time in 1980. In Census 2000, the telephone question emphasizes the availability of service in the house, apartment, or mobile home. Data on telephone service are needed because an individual can own a telephone but have no service to make or receive calls. In 1980 and 1990, respondents were asked about the presence of a telephone in the housing unit.

## TENURE

The data on tenure were obtained from answers questionnaire Item 35, which was asked at all occupied housing units. All occupied housing units are classified as either owner occupied or renter occupied.

Owner occupied. A housing unit is owner occupied if the owner or co-owner lives in the unit even if it is mortgaged or not fully paid for. The owner or co-owner must live in the unit and usually is Person 1 on the questionnaire. The unit is "Owned by you or someone in this household with a mortgage or loan" if it is being purchased with a mortgage or some other debt arrangement, such as a deed of trust, trust deed, contract to purchase, land contract, or purchase agreement. The unit is also considered owned with a mortgage if it is built on leased land and there is a mortgage on the unit.

A housing unit is "Owned by you or someone in this household free and clear (without a mortgage or loan)" if there is no mortgage or other similar debt on the house, apartment, or mobile home including units built on leased land if the unit is owned outright without a mortgage.

Renter occupied. All occupied housing units that are not owner occupied, whether they are rented for cash rent or occupied without payment of cash rent, are classified as renter occupied. "No cash rent" units are separately identified in the rent tabulations. Such units are generally provided free by friends or relatives or in exchange for services, such as resident manager, caretaker, minister, or tenant farmer. Housing units on military bases also are classified in the "No cash rent" category. A housing unit is "Rented for cash rent" if any money rent is paid or contracted for. The rent may be paid by someone who is not living in the unit such as a relative or friend living elsewhere, or it may be paid by a private company or organization, for example, a cannery or welfare agency.

Comparability. In Guam, the data on tenure were collected for the first time in 1960, and since 1970 for all other Pacific Island areas. In 1970, the question on tenure also included a category for condominium and cooperative ownership. In 1980, condominium units and cooperatives were dropped from the tenure item. For 1990, the response categories were expanded to allow the respondent to report whether the unit was owned with a mortgage or loan, or free and clear (without a mortgage). The distinction between units owned with a mortgage and units owned free and clear was added in 1990 to improve the count of owner-occupied units. Research done in the United States after the 1980 census indicated some respondents did not consider their units owned if they had a mortgage. In Census 2000, we continued with the same tenure categories used in the 1990 census.

## TOILET FACILITIES

The data on toilet facilities were obtained from answers to questionnaire Items 41c and 41d, which were asked at both occupied and vacant housing units. A flush toilet is connected to piped water and empties into a main sewer, a septic tank, or a cesspool. If the unit did not have a flush toilet, the respondent was asked to identify their type of toilet facilities as "Outhouse or privy" or "Other or none."

Comparability. In Guam, the data on toilet facilities were collected for the first time in 1960, and since 1970 for all other Pacific Island Areas. In 1980, the data were not shown separately but were combined with data on water supply and bathtub or shower to determine the presence of complete plumbing facilities.

## TYPE OF MATERIAL USED FOR FOUNDATION

The data on type of material used for foundation of the building were obtained from answers to questionnaire Item 52, which was asked at both occupied and vacant housing units. Housing units were classified according to the type of material used most in the construction of the foundation of the structure. The categories for types of materials used are: (1) "Concrete"; (2) "Wood pier or pilings"; or (3) "Other," for all types of construction materials which cannot be described by any other specific categories or if there is no foundation.

Comparability. The data on type of material used for foundation were collected for the first time in 1990.

## TYPE OF MATERIAL USED FOR OUTSIDE WALLS

The data on type of material used for outside walls of the building were obtained from answers to questionnaire Item 50, which was asked of both occupied and vacant housing units. Housing units were classified according to the type of material used most in the construction of the outside walls of the structure. The categories for types of materials used are: (1) "Poured concrete"; (2) "Concrete blocks" (the wall may be covered with plaster cement); (3) "Metal," including zinc, tin, steel, etc.; (4) "Wood," including woodboards, plywood, etc.; or (5) "Other," for all other types of construction materials which cannot be described by any of the specific categories.

Comparability. In Guam, the data on type of construction were collected for the first time in 1960. Materials used for outside walls have been collected since 1980 for all other Pacific Island Areas. In 1970 and 1980, these data were shown only for year-round housing units. Since 1990, these data are shown for all housing units and the category "no walls" was dropped from the questionnaire.

## TYPE OF MATERIAL USED FOR ROOF

The data on type of material used for the roof of the building were obtained from answers to questionnaire Item 51, which was asked at both occupied and vacant housing units. Housing units were classified according to the type of material used most in the construction of the roof of the structure. The categories for types of materials used are: (1) "Poured concrete"; (2) "Metal," including zinc, tin, steel, etc.; (3) "Wood," including woodboards, plywood, etc.; or (4) "Other," for all other types of construction materials which cannot be described by any of the specific categories.

Comparability. The data on type of material used for roofs were collected for the first time in 1980 and were shown only for year-round housing units. Since 1990, these data are shown for all housing units and the category "thatch" was dropped from the questionnaire.

## UNITS IN STRUCTURE

The data on units in structure (also referred to as "type of structure") were obtained from answers to questionnaire Item 36, which was asked at both occupied and vacant housing units. In Guam and the Commonwealth of the Northern Mariana Islands, a structure is a separate building that either has open spaces on all sides or is separated from other structures by dividing walls that extend from ground to roof. In determining the number of units in a structure, all housing units, both occupied and vacant, are counted. Stores and office space are excluded. The statistics are presented for Guam and the Commonwealth of the Northern Mariana Islands for the number of housing units in structures of specified type and size, not for the number of residential buildings.

1-unit, detached. This is a 1-unit structure detached from any other house; that is, with open space on all four sides. Such structures are considered detached even if they have an adjoining shed or garage. A 1-family house that contains a business is considered detached as long as the building has open space on all four sides. Mobile homes to which one or more permanent rooms have been added or built also are included.

1-unit, attached. This is a 1 -unit structure that has one or more walls extending from ground to roof separating it from adjoining structures. In row houses (sometimes called townhouses), double houses, or houses attached to nonresidential structures, each house is a separate, attached structure if the dividing or common wall goes from ground to roof.

2 or more units. These are units in structures containing 2 or more housing units, further categorized as units in structures with 2,3 or 4,5 to 9,10 to 19,20 to 49 , and 50 or more units.

Mobile home. Both occupied and vacant mobile homes to which no permanent rooms have been added are counted in this category. Mobile homes used only for business purposes or for extra sleeping space and mobile homes for sale on a dealer's lot, at the factory, or in storage are not counted in the housing inventory. In 1990, the category was "mobile home or trailer."

Boat, RV, van, etc. This category is for any living quarters occupied as a housing unit that does not fit the previous categories. Examples that fit this category are houseboats, railroad cars, campers, and vans.

Comparability. In Guam, the data on units in structure were collected for the first time in 1960, and since 1970 for all other Pacific Island Areas. In 1970 and 1980, data were shown only for year-round housing units. Since 1990, data are shown for all housing units. In 1990, the category
"Boat" was replaced with "Other" and the categories " 2 houses" and " 3 or more houses" were added only in American Samoa to help identify traditional living arrangements. In 2000, the category "Other" was replaced with "Boat, RV, van, etc." and the category "A container" was added.

In American Samoa, the term "house" refers to conventional western style houses as well as fales. For cases where a household occupies more than one structure, answer categories were provided to reflect the number of houses/fales/structures comprising the living quarters. In American Samoa, the definition for " 1 -unit detached," " 1 -unit attached," "A container," and "Boat, RV, van, etc." are the same as for Guam and the Commonwealth of the Northern Mariana Islands. In addition, the following categories were included in American Samoa:

2 houses. This category includes those living quarters consisting of 2 structures both of which were occupied by only one household.

3 or more houses. This category includes those living quarters consisting of 3 or more structures all of which were occupied by only one household.

## UTILITIES

The data on utility costs were obtained from answers to questionnaire Items 54a through 54d, which were asked of occupied housing units. Questions 54a through 54d asked for the average monthly cost of utilities (electricity, gas, water and sewer) and other fuels (oil, coal, wood, kerosene, etc.). They are included in the computation of "Gross Rent," "Gross Rent as a Percentage of Household Income in 1999," "Selected Monthly Owner Costs," and "Selected Monthly Owner Costs as a Percentage of Household Income in 1999."

Costs are recorded if paid by or billed to occupants, a welfare agency, relatives, or friends. Costs that are paid by landlords, included in the rent payment, or included in condominium or cooperative fees are excluded.

Limitation of the data. Research has shown that respondents tended to overstate their expenses for electricity and gas when compared with utility company records.

Comparability. In Guam, the data on utility costs were collected for the first time in 1960 but were not collected in 1970. The data have been collected since 1980 for all Pacific Island Areas. In 1990, "average monthly costs for gas" is asked separately from "oil, coal, kerosene, wood, etc." In 1980, "gas" was included in the "oil, coal, kerosene, wood, etc.," category. In 2000, "and sewer" was added to the "Water" utility category.

## VACANCY STATUS

The data on vacancy status were obtained from the questionnaire, Item C. Vacancy status and other characteristics of vacant units were determined by census enumerators obtaining information from landlords, owners, neighbors, rental agents, and others. Vacant units are subdivided according to their housing market classification as follows:

For rent. These are vacant units offered "for rent," and vacant units offered either "for rent" or "for sale."

For sale only. These are vacant units offered "for sale only," including units in cooperatives and condominium projects if the individual units are offered "for sale only." If units are offered either "for rent" or "for sale," they are included in the "for rent" classification.

Rented or sold, not occupied. If any money rent has been paid or agreed upon but the new renter has not moved in as of the date of enumeration, or if the unit has recently been sold but the new owner has not yet moved in, the vacant unit is classified as "rented or sold, not occupied."

For seasonal, recreational, or occasional use. These are vacant units used or intended for use only in certain seasons, for weekends, or other occasional use throughout the year. Seasonal units include those used for summer or winter sports or recreation, such as beach cottages and hunting cabins. Seasonal units also may include quarters for such workers as herders and loggers. Interval ownership units, sometimes called shared-ownership or time-sharing condominiums, also are included in this category.

For migrant workers. These include vacant units intended for occupancy by migratory workers employed in farm work during the crop season. (Work in a cannery, a freezer plant, or a food-processing plant is not farm work.)

Other vacant. If a vacant unit does not fall into any of the classifications specified above, it is classified as "other vacant." For example, this category includes units held for occupancy by a caretaker or janitor, and units held for personal reasons of the owner.

Available housing. Available housing units are vacant units that are "for sale only" or "for rent."

Available housing vacancy rate. The available housing vacancy rate is the proportion of the housing inventory that is available "for sale only" or "for rent." It is computed by dividing the number of available units by the sum of occupied units and the number of available units, and then multiplying by 100 . This measure is rounded to the nearest tenth.

Homeowner vacancy rate. The homeowner vacancy rate is the proportion of the homeowner housing inventory that is vacant "for sale." It is computed by dividing the number of vacant units "for sale only" by the sum of owner-occupied units and vacant units that are "for sale only," and then multiplying by 100 . This measure is rounded to the nearest tenth.

Rental vacancy rate. The rental vacancy rate is the proportion of the rental inventory that is vacant "for rent." It is computed by dividing the number of vacant units "for rent" by the sum of renter-occupied units and vacant units that are "for rent," and then multiplying by 100 . This measure is rounded to the nearest tenth.

Comparability. In Guam, the data on units in structure were collected for the first time in 1960, and since 1970 for all other Pacific Island Areas. Since 1990, the category, "For seasonal, recreational, or occasional use," was used. In earlier censuses, separate categories were used to collect data on these types of vacant units. Also, in 1970 and 1980, housing characteristics generally were presented only for year-round units. Beginning in 1990 and continuing into Census 2000, housing characteristics are shown for all housing units.

## VALUE

The data on value (also referred to as "price asked" for vacant units) were obtained from answers to questionnaire Item 60, which was asked at owner-occupied housing units and units that were being bought, or vacant for sale at the time of enumeration. In Guam and the Commonwealth of the Northern Mariana Islands, value is the respondent's estimate of how much the property (house and lot, mobile home and lot, or apartment) would sell for if it were for sale. If the house or mobile home was owned or being bought, but the land on which it sits was not, the respondent was asked to estimate the combined value of the house or mobile home and the land. For vacant units, value was the price asked for the property. In American Samoa, value was the respondent's estimate of how much the housing unit only would sell for if it were for sale. Value was tabulated separately for all owner-occupied and vacant-for-sale housing units, specified owner-occupied housing units, and specified vacant-for-sale housing units.

Specified owner-occupied and specified vacant-for-sale units. Specified owner-occupied and specified vacant-for-sale housing units include only 1 -family houses without a business or medical office on the property. The data for "specified units" exclude mobile homes, houses with a business or medical office and housing units in multiunit buildings.

Median and quartile value. The median divides the value distribution into two equal parts, one-half of the cases falling below the median value of the property (house and lot, mobile home and lot, or condominium unit) and one-half above the median. Quartiles divide the value distribution into four equal parts. Median and quartile value are computed on the basis of a standard distribution (see the "Standard Distributions" section under "Derived Measures"). Median and quartile value calculations are rounded to the nearest hundred dollars. Upper and lower quartiles can be used to note large value differences among various geographic areas. (For more information on medians and quartiles, see "Derived Measures.")
Aggregate value. To calculate aggregate value, the amount assigned for the category "Less than $\$ 10,000$ " is $\$ 9,000$. The amount assigned to the category " $\$ 1,000,000$ or more" is $\$ 1,250,000$. Aggregate value is rounded to the nearest hundred dollars. (For more information on aggregates and means, see "Derived Measures.")

Comparability. In Guam, the data on value were collected for the first time in 1960, and since 1970 for all other Pacific Island areas. In 1980, data on value of mobile homes were not collected. Since 1990, the question was asked of mobile homes.

## VEHICLES AVAILABLE

The data on vehicles available were obtained from answers to questionnaire Item 45, which was asked at occupied housing units. These data show the number of households with a specified number of passenger cars, vans, and pickup or panel trucks of 1-ton capacity or less kept at home and available for the use of household members. Vehicles rented or leased for 1 month or more, company vehicles, and police and government vehicles are included if kept at home and used for nonbusiness purposes. Dismantled or immobile vehicles are excluded. Vehicles kept at home but used only for business purposes also are excluded.

Vehicles per household (Mean vehicles available). This is computed by dividing aggregate vehicles available by the number of occupied housing units.
Limitation of the data. The statistics do not measure the number of vehicles privately owned or the number of households owning vehicles.

Comparability. The data on automobiles available were collected for the first time in 1980. The 1990 and Census 2000 data are comparable to the 1980 vehicles-available tabulations. In 1990, the terminal category identified " 7 or more"; this was changed to "6 or more" in Census 2000.

## WATER SUPPLY

The data on water supply (also referred to as "piped water") were obtained from answers to questionnaire item 41a, which was asked at both occupied and vacant housing units. Piped water means a supply of water is available at a sink, wash basin, bathtub, or shower. Hot water need not be supplied continuously. Hot water supplied by an electric faucet attachment at the kitchen sink, an electric shower attachment, etc., is not considered to be hot piped water.
Piped water may be located within the unit itself, or it may be in the hallway, or in a room used by several units in the building. It may even be necessary to go outdoors to reach that part of the building in which the piped water is located.

Comparability. In Guam, the data on water supply were collected for the first time in 1960, and since 1970 for all other Pacific Island Areas. In 1980, the data were shown only for year-round housing units and were shown separately by type of energy used to heat the water, as well as combined with the data on bathtub or shower and flush toilet to determine the presence of complete plumbing facilities. In 1990, the data were shown for all housing units and tabulations similar to 1980 are presented. In 2000, the question relating to type of energy used for heating water was dropped.

## YEAR HOUSEHOLDER MOVED INTO UNIT

The data on year householder moved into unit were obtained from answers to questionnaire Item 38, which was asked at occupied housing units. These data refer to the year of the latest move by the householder. If a householder moved back into a housing unit he or she previously occupied, the year of the latest move was reported. If the householder moved from one apartment to
another within the same building, the year the householder moved into the present apartment was reported. The intent is to establish the year the present occupancy by the householder began. The year that the householder moved in is not necessarily the same year other members of the household moved in, although in the great majority of cases an entire household moves at the same time.

Median year householder moved into unit. Median year householder moved into unit divides the distribution into two equal parts, one-half of the cases falling below the median year householder moved into unit and one-half above the median. Median year householder moved into unit is computed on the basis of a standard distribution (see the "Standard Distributions" section under "Derived Measures"). Median year householder moved into unit is rounded to the nearest whole number. (For more information on medians, see "Derived Measures.")

Comparability. The data on year householder moved into unit were collected for the first time in 1980. For 1990 and 2000, the response categories have been modified to accommodate moves during each 10-year period between 1980 and 1990, and between 1990 and 2000.

## YEAR STRUCTURE BUILT

The data on year structure built were obtained from answers to questionnaire Item 37, which was asked at both occupied and vacant housing units. Data on year structure built refer to when the building was first constructed, not when it was remodeled, added to, or converted. In the case of a fale, the construction was considered to be complete when the foundation, pillar posts, and roof were in place. For housing units under construction that met the housing unit definition-that is, all exterior windows, doors, and final usable floors were in place-the category 1999 or 2000 was used for tabulations. For mobile homes, houseboats, RVs, etc., the manufacturer's model year was assumed to be the year built. The figures shown in census data products relate to the number of units built during the specified periods that were still in existence at the time of enumeration.

Median year structure built. Median year structure built divides the distribution into two equal parts, one-half of the cases falling below the median year structure built and one-half above the median. Median year structure built is computed on the basis of a standard distribution (see the "Standard Distributions" section under "Derived Measures"). Median year structure built is rounded to the nearest whole number. Median age of housing can be obtained by subtracting median year structure built from 2000. For example, if the median year structure built is 1967, the median age of housing in that area is 33 years (2000 minus 1967). (For more information on medians, see "Derived Measures.")

Limitation of the data. Data on year structure built are more susceptible to errors of response and nonreporting than data on many other items because respondents must rely on their memory or on estimates by people who have lived in the neighborhood a long time.

Comparability. The data on year structure built were collected for the first time in the 1970 census and were shown only for year-round housing units in 1970 and 1980. Since then, data are shown for all housing units and the response categories have been modified to accommodate the 10 -year period between each census. In the 1980 census, the number of units built before 1940 appeared to be underreported. In an effort to alleviate this problem, a "Don't know" category was added in 1990. Responses of "Don't know" were treated like blanks and the item was allocated from similar units by tenure and structure type. However, this led to an extremely high allocation rate for the item. In the United States, a 1996 test proved inconclusive in determining whether a "Don't know" category led to a more accurate count of older units, but the test showed the allocation rate for this item was greatly reduced by the elimination of the "Don't know" category. As a result, "Don't know" was deleted for Census 2000.

## DERIVED MEASURES

Census data products include various derived measures, such as medians, means, and percentages, as well as certain rates and ratios. Derived measures that round to less than 0.1 are shown as zero.

## Aggregate

See "Mean."

## Average

See "Mean."

## Interpolation

Interpolation is frequently used to calculate medians or quartiles and to approximate standard errors from tables based on interval data. Different kinds of interpolation may be used to estimate the value of a function between two known values, depending on the form of the distribution. The most common distributional assumption is that the data are linear, resulting in linear interpolation. However, this assumption may not be valid for income data, particularly when the data are based on wide intervals. For these cases, a Pareto distribution is assumed and the median is estimated by interpolating between the logarithms of the upper and lower income limits of the median category. The Census Bureau estimates median income using the Pareto distribution within intervals when the intervals are wider than $\$ 2,500$.

## Mean

This measure represents an arithmetic average of a set of values. It is derived by dividing the sum (or aggregate) of a group of numerical items by the total number of items in that group. For example, mean household earnings is obtained by dividing the aggregate of all earnings reported by individuals with earnings living in households by the total number of households with earnings. (Additional information on means and aggregates is included in the separate explanations of many population and housing subjects.)

Aggregate. An aggregate is the sum of the values for each of the elements in the universe. For example, aggregate household income is the sum of the incomes of all households in a given geographic area. Means are derived by dividing the aggregate by the appropriate universe.

Rounding for selected aggregates. To protect the confidentiality of responses, the aggregates shown in matrices for the list of subjects below are rounded. This means that the aggregates for these subjects, except for travel time to work, are rounded to the nearest hundred dollars. Unless special rounding rules apply (see below); $\$ 150$ rounds up to $\$ 200 ; \$ 149$ rounds down to $\$ 100$. Note that each cell in a matrix is rounded individually. This means that an aggregate value shown for the United States may not necessarily be the sum total of the aggregate values in the matrices for the states. This also means that the cells in the aggregate matrices may not add to the total and/or subtotal lines.

## Special rounding rules for aggregates

- If the dollar value is between $-\$ 100$ and $+\$ 100$, then the dollar value is rounded to $\$ 0$.
- If the dollar value is less than $-\$ 100$, then the dollar value is rounded to the nearest $-\$ 100$.

## Aggregates Subject to Rounding

Contract Rent
Earnings in 1999 (Households)
Earnings in 1999 (Individuals)
Gross Rent*
Income Deficit in 1999 (Families)
Income Deficit in 1999 Per Family Member
Income Deficit in 1999 Per Unrelated Individual
Income in 1999 (Household/Family/Nonfamily Household)
Income in 1999 (Individuals)
Real Estate Taxes
Rent Asked
Selected Monthly Owner Costs* by Mortgage Status
Travel Time To Work**
Type of Income in 1999 (Households)
Value, Price Asked

* Gross Rent and Selected Monthly Owner Costs include other aggregates that also are subject to rounding. For example, Gross Rent includes aggregates of payments for "contract rent" and the "costs of utilities and fuels." Selected Monthly Owner Costs includes aggregates of payments for "mortgages, deeds of trust, contracts to purchase, or similar debts on the property (including payments for the first mortgage, second mortgage, home equity loans, and other junior mortgages); real estate taxes; fire, hazard, and flood insurance on the property, and the costs of utilities and fuels."
** Aggregate travel time to work is zero if the aggregate is zero, is rounded to 4 minutes if the aggregate is 1 to 7 minutes, and is rounded to the nearest multiple of 5 minutes for all other values (if the aggregate is not already evenly divisible by 5 ).

## Median

This measure represents the middle value (if n is odd) or the average of the two middle values (if n is even) in an ordered list of n data values. The median divides the total frequency distribution into two equal parts: one-half of the cases falling below the median and one-half above the median. Each median is calculated using a standard distribution (see below). (For more information, see "Interpolation.")

For data products displayed in American FactFinder, medians that fall in the upper-most category of an open-ended distribution will be shown with a plus symbol (+) appended (e.g., "\$2,000+" for contract rent), and medians that fall in the lowest category of an open-ended distribution will be shown with a minus symbol (-) appended (e.g., "\$100-for contract rent"). For data products on CD-ROM and DVD, and data files that are downloaded by users (i.e., FTP files), plus and minus signs will not be appended. Contract rent, for example will be shown as $\$ 2001$ if the median falls in the upper-most category ( $\$ 2,000$ or more) and $\$ 99$ if the median falls in the lowest category (Less than \$100). (The "Standard Distributions" section below shows the open-ended intervals for medians.)

Standard distributions. In order to provide consistency in the values within and among data products, standard distributions from which medians and quartiles are calculated are used for Census 2000. This is a new approach for Census 2000; in previous censuses medians were not necessarily based on a single, standard distribution. The Census 2000 standard distributions are listed below.

Standard Distribution for Median Age:
[116 data cells]
Under 1 year
1 year

Built 1939 or earlier

## Percentage

This measure is calculated by taking the number of items in a group possessing a characteristic of interest and dividing by the total number of items in that group, and then multiplying by 100.

## Quartile

This measure divides a distribution into four equal parts. The first quartile (or lower quartile) is the value that defines the upper limit of the lowest one-quarter of the cases. The second quartile is the median. The third quartile (or upper quartile) is defined as the upper limit of the lowest three quarters of cases in the distribution. Quartiles are presented for certain financial characteristics, such as housing value and contract rent. The distribution used to compute quartiles is the same as that used to compute medians for that variable.

## Rate

This is a measure of occurrences in a given period of time divided by the possible number of occurrences during that period. For example, the homeowner vacancy rate is calculated by dividing the number of vacant units "for sale only" by the sum of owner-occupied units and vacant units that are "for sale only," and then multiplying by 100. Rates are sometimes presented as percentages.

## Ratio

This is a measure of the relative size of one number to a second number expressed as the quotient of the first number divided by the second. For example, the sex ratio is calculated by dividing the total number of males by the total number of females, and then multiplying by 100.

## INTRODUCTION

The Census Bureau conducted the Census 2000 operations in American Samoa, the Commonwealth of the Northern Mariana Islands (CNMI), and Guam (collectively referred to as the "Pacific Island Areas") in partnership with the government of each Pacific Island Area. This partnership ensured that Census 2000 data met federal legal requirements, as well as the specific needs of each area. The Census 2000 operations in the Pacific Island Areas were built around the following three strategies:

- Strategy One: Build Partnerships at Every Stage of the Process. The Census Bureau and the government of each Pacific Island Area developed and signed a Memorandum of Agreement (MOA) that outlined mutual roles and responsibilities. In consultation with the government of each area, census questionnaire content was developed to meet the legislative and programmatic needs of each Pacific Island Area. A separate advertisement and promotion campaign was developed for each Pacific Island Area to build awareness of the census and boost participation.

Census 2000 in the Pacific Island Areas was conducted using the list/enumerate procedure. This decision was based on recommendations from Pacific Island Area representatives and an analysis of the various data collection methodologies. Unlike the stateside list/enumerate procedures, the United States Post Office delivered Advance Census Reports, (ACRs) (D-13 AS, D-13 CNMI, and D-13 G) to residential addresses in the Pacific Island Areas. Respondents were instructed to complete the form and hold it for an enumerator to pick up.

- Strategy Two: Keep it Simple. Using the findings from our stateside census testing and research, the Census Bureau designed respondent-friendly questionnaires and forms that were simpler and easier for respondents to understand and answer and for the enumerators to administer.

Questionnaires were available in English. Locally produced questionnaire guides were available in languages widely spoken in the Pacific Island Areas.

Be Counted questionnaires were readily available to respondents in convenient locations identified through consultation with local partners.

- Strategy Three: Use Technology. The Census Bureau made greater use of the telephone as a data collection tool, in addition to its use in providing assistance to respondents with questions about Census 2000.

The Census Bureau developed an Office Control System software package for the Pacific Island Areas. The system was designed to check-in questionnaires and address registers and locate any duplicates or missing questionnaires. The control system also was available at Headquarters to receive status reports.

## HEADQUARTERS AND FIELD OFFICE STAFFING

Headquarters: The Decennial Management Division (DMD). The DMD provided overall guidance to the Pacific Island Areas regarding field office infrastructure based on staffing requirements for planned data collection and office operations. The DMD provided the Pacific Island Areas with a calendar of operations and monitored all census data collection operations with the help of the Census Advisor assigned to each Pacific Island Area. As in previous censuses, headquarters staff developed all field and office use forms, procedures, and training materials. Each of the Pacific Island Areas was consulted and informed about the development and content of these materials.

Regional Census Center (RCC). The Los Angeles RCC had responsibility for conducting the TIGER database updates and for working with the Pacific Island Areas on the participant statistical programs. The Los Angeles RCC also was responsible for producing maps (other than those used by enumerators) for the Pacific Island Areas.

Local Census Office (LCO). The Government of each Pacific Island Area established a LCO. The LCO for American Samoa was in Pago Pago. The LCO for CNMI was on Saipan and the LCO for Guam was in Tamuning. The Governor of each Pacific Island Area, through the terms of the MOA for each area, was responsible for selecting the Census Manager for the LCOs. The Census Manager was responsible for the overall coordination and administration of the LCO, including staffing, payroll, and census field and office operations. Other staff in the LCO included the Partnership/Media Specialist, the Assistant Manager for Field Operations (AMFO), the Geographic Specialist, the Field Operations Supervisor (FOS), the Assistant Manager for Office Operations (AMOO), crew leaders, and enumerators.

A Census Bureau employee was appointed to work with the Census Manager. This person, designated as the Census Advisor, worked in the LCOs with the local census staff and was responsible for ensuring procedures were followed during all office and field data collection activities.

National Processing Center (NPC), Jeffersonville, Indiana. Once the LCOs closed, the Pacific Island Areas address registers, maps, and questionnaires were shipped to the NPC in Jeffersonville, Indiana, for check-in, keying, the digitizing of map spots and map features and data capture.

## ENUMERATION AND RESIDENCE RULES

In accordance with census practice, each person was to be enumerated as an inhabitant of his or her "usual residence" in Census 2000. Usual residence is the place where the person lives and sleeps most of the time. This place is not necessarily the same as the person's legal residence or voting residence. In the vast majority of cases, however, the use of these different bases of classification would produce substantially the same statistics, although there might be appreciable differences for a few areas.

The implementation of this practice has resulted in the establishment of rules for certain categories of people whose usual place of residence is not immediately apparent. Furthermore, this practice means that people were not always counted as residents of the place where they happened to be staying on Census Day (April 1, 2000).

Enumeration rules. Each person whose usual residence was in American Samoa, Guam, or the CNMI was to be included in the census, without regard to the person's legal status or citizenship. As in previous censuses, people specifically excluded from the census were citizens of foreign countries temporarily traveling or visiting in the Pacific Island Areas who had not established a residence.

Residents of American Samoa, Guam, or the CNMI who were temporarily overseas were to be enumerated at their usual residence in the Pacific Island Areas. Persons with a usual residence outside the Pacific Island Areas were not enumerated in Census 2000.

Residence rules. Each person included in the census was to be counted at his or her usual residence - the place where he or she lives and sleeps most of the time. If a person had no usual residence, the person was to be counted where he or she was staying on Census Day.

People temporarily away from their usual residence on Census Day, such as on a vacation or business trip, were to be counted at their usual residence.

Armed forces personnel in the Pacific Island Areas. Members of the U.S. Armed Forces were counted at their usual residence (the place where they lived and slept most of the time) whether it was on or off the military installation. Family members of armed forces personnel were counted at their usual residence (for example, with the armed forces person or at another location).

Personnel assigned to each Navy and Coast Guard vessel with a U.S. homeport were given the opportunity to report an onshore residence where they usually stayed when they were off the ship. Those who reported an onshore residence were counted there; those who did not were counted at their vessel's homeport.

Personnel on U.S. flag merchant vessels - American Samoa. Crews of U.S. flag merchant vessels docked in an American Samoa port or sailing from one American Samoa port to another American Samoa port were counted at their usual onshore residence if they reported one. Those who did not were counted as residents of the ship and were assigned as follows:

- The American Samoa port if the vessel was docked there on Census Day.
- The port of departure if the ship was sailing from one American Samoa port to another American Samoa port.

The following crews of U.S. merchant ships were not counted in the American Samoa census:

- Those docked in a port other than in American Samoa.
- Those sailing from an American Samoa port to a non-American Samoa port.
- Those sailing from a non-American Samoa port to an American Samoa port.

Personnel on U.S. flag merchant vessels - CNMI. Crews of U.S. flag merchant vessels docked in a CNMI port or sailing from one CNMI port to another CNMI port were counted at their usual onshore residence if they reported one. Those who did not were counted as residents of the ship and were assigned as follows:

- The CNMI port if the vessel was docked there on Census Day.
- The port of departure if the ship was sailing from one CNMI port to another CNMI port.

The following crews of U.S. merchant ships were not counted in the CNMI census:

- Those docked in a port other than in CNMI.
- Those sailing from a CNMI port to a non-CNMI port.
- Those sailing from a non-CNMI port to a CNMI port.

Personnel on U.S. flag merchant vessels - Guam. Crews of U.S. flag merchant vessels docked in a Guam port or sailing from one Guam port to another Guam port were counted at their usual onshore residence if they reported one. Those who did not were counted as residents of the ship and were assigned as follows:

- The Guam port if the vessel was docked there on Census Day.
- The port of departure if the ship was sailing from one Guam port to another Guam port.

The following crews of U.S. merchant ships were not counted in the Guam census:

- Those docked in a port other than in Guam.
- Those sailing from a Guam port to a non-Guam port.
- Those sailing from a non-Guam port to a Guam port.

People away at school. College students were counted as residents of the area in which they were living while attending college, as they have been since the 1950 census. Children in boarding schools below the college level were counted at their parental home.

People in institutions. People under formally authorized, supervised care or custody, such as in local jails; juvenile institutions; nursing or convalescent homes for the aged or dependent; homes, schools, hospitals, or wards for the physically handicapped, mentally retarded, or mentally ill; or in drug/alcohol recovery facilities were counted at these places.

People in general hospitals. People in general hospitals or wards (including Veterans' Affairs hospitals) on Census Day were counted at their usual residence. Newborn babies were counted at the residence where they would be living.

People in shelters. People staying on Census Day at emergency or transitional shelters with sleeping facilities for people without housing, such as for abused women or runaway or neglected youth, were counted at the shelter.

People with multiple residences. People who lived at more than one residence during the week, month, or year were counted at the place where they lived most of the time.

People away from their usual residence on Census Day. Temporary, migrant, or seasonal workers who did not report a usual U.S. residence elsewhere were counted as residents of the place where they were on Census Day.

In some areas, natural disasters (hurricanes, tornadoes, flooding, and so forth) displaced households from their usual place of residence. If these people reported a destroyed or damaged residence as their usual residence, they were counted at that location.

People away from their usual residence were counted by means of interviews with other members of their families, resident managers, or neighbors.

## DATA COLLECTION PROCEDURES

Enumeration of housing units. Beginning in late March, enumerators visited and listed every housing unit and collected the ACR from the household if it was completed prior to the enumerator's visit. Otherwise, the enumerator conducted a personal interview to complete a simplified enumerator questionnaire (D-2(E) AS, G, CNMI) at each housing unit or recorded vacant housing information at vacant units. Enumerators also developed an address list for their assigned area and map spotted each living quarter's location on a map.

The ACR and the enumerator questionnaire contained all questions asked of every person at every housing unit. Each questionnaire contained both basic (stateside 100-percent equivalent) and detailed (stateside sample equivalent) population and housing questions. Only housing information was obtained from vacant housing units.

Clerical edit and coding. The enumerators conducted an initial check of the questionnaires for completeness and consistency. The census office staff performed additional edit checks. Failed edit cases that didn't have a telephone number or for whom the office attempt to telephone failed, were assigned for field follow-up.

The coding of all written entries, including relationship, ethnic origin and race, language, place of birth, migration, place of work, and industry and occupation was done at the Pacific Island Areas Local Census Offices (LCOs). Coded questionnaires were sent to the National Processing Center (NPC) in Jeffersonville, Indiana, for data capture.

Field follow-up. Follow-up enumerators visited each address in the Pacific Island Areas for which questionnaires were missing to obtain a completed questionnaire. They returned to the households that could not be reached by telephone to complete missing or incomplete items on
the questionnaires which failed clerical edit. Enumerators also visited housing units that were enumerated as vacant to verify that they were vacant on Census Day. If they were not vacant on Census Day, they collected the appropriate information for the housing unit. If a follow-up enumerator determined that the unit was vacant on Census Day, regardless of the present occupancy status, the enumerator obtained information about the unit from a neighbor or other knowledgeable source and filled out a questionnaire for that unit, completing specified items on the questionnaire for vacant units.

## Collecting Data on Populations Living in Nontraditional Households

During a decennial census, the Census Bureau not only counts people living in houses and apartments, but also must count people who live in group quarters and other nontraditional housing units, as well as people with no usual residence. Group quarters include nursing homes, group homes, college dormitories, migrant and seasonal farm worker camps, and military barracks or installations.

Some of the methods that were used for these special populations are listed below:

- Group quarters enumeration identified the location of all group living quarters and made advance visits to each special place. (A special place is a place containing one or more group quarters where people live or stay other than the usual house or apartment.) Census staff listed all residents at group quarters in April 2000 and distributed questionnaire packets.
- The Census Bureau designed an operation for Census 2000 called Service-Based Enumeration (SBE) to improve the count of individuals who might not be included through standard enumeration methods. The SBE operation was conducted in selected service locations, such as shelters and soup kitchens, and targeted nonsheltered outdoor locations.
- Another special operation counted highly transient individuals living at recreational vehicle campgrounds and parks, commercial or public campgrounds, marinas, and workers' quarters at fairs and carnivals.
- The Census Bureau worked with the Department of Defense and the U.S. Coast Guard to count individuals living on military installations, and with the U.S. Maritime Administration to identify maritime vessels for enumeration.

## Be Counted Program

The Be Counted Questionnaires were available for people who believed they did not receive a questionnaire or were not included on a census form. Be Counted Questionnaires were placed at locations people frequent, such as post offices, community centers, and other convenient places.

The Pacific Island Areas Be Counted Questionnaires contained both the basic and detailed population and housing questions and were available in English.

## PROCESSING PROCEDURES

The Pacific Island Areas questionnaires were processed in the Census Bureau's Jeffersonville, Indiana, processing office. The information supplied to the enumerator by the respondent was recorded by marking the answers in the appropriate boxes and, in some cases, entering a write-in response.

The data processing was performed in several stages. All questionnaires passed through a check-in procedure upon their arrival at the processing office. The Pacific Island Areas questionnaires were keyed, and the resulting file was sent to the Census Bureau headquarters for editing and tabulating operations. The files were prepared at headquarters using the Integrated Microcomputer Processing System (IMPs).

## GLOSSARY

## 100-Percent Data

Information based on population and housing questions collected from every inhabitant and housing unit in American Samoa, Guam, and the Commonwealth of the Northern Mariana Islands.

## Address List Review

As part of the Memoranda of Agreement for American Samoa, Guam, and the Commonwealth of the Northern Mariana Islands, the governor of each area designated a committee to review the Address Listing Pages and census maps once census enumeration was complete. The committee compared the local estimates for housing unit counts and the group quarters population with the census results shown on the local review map spotted maps and Address Listing Pages. Any problems were documented on a Local Government Review Listing Form and resolved before the LCOs closed.

## Advance Notice Letter

This letter was part of the questionnaire mailing strategy. This strategy included a blanket mailing to all residential customers of an advance notice letter, followed by a blanket mailing of advance questionnaires.

## American FactFinder (AFF)

An electronic system for access and dissemination of Census Bureau data. The system is available through the Internet and offers prepackaged data products and the ability to build custom products. The system serves as the vehicle for accessing and disseminating data from Census 2000. The system was formerly known as the Data Access and Dissemination System (DADS).

## Be Counted Enumeration and Be Counted From

The Be Counted enumeration procedure targets areas that are traditionally undercounted. Unaddressed census questionnaires (Be Counted forms) are placed at selected sites where people who believe they were not counted can pick them up, complete them, and mail them to the Local Census Office. The sites are in targeted areas that local government and community groups, in conjunction with the Census Bureau, identify.

## Census 2000 Publicity Office (C2PO)

An office at the Census Bureau which developed, implemented, and coordinated an integrated marketing program for Census 2000, including paid advertising, public relations, partnerships, and local outreach.

## Confidentiality

The guarantee made by law (Title 13, United States Code) to individuals who provide census information regarding nondisclosure of that information to others.

## Confidentiality Edit

The name for the Census 2000 disclosure avoidance procedure.

## Data Access and Dissemination System (DADS)

The system is now known as the American FactFinder (AFF).

## Decennial Census

The Census of Population and Housing, taken by the Census Bureau in years ending in 0 (zero). Article I of the Constitution requires that a census be taken every 10 years for the purpose of reapportioning the U.S. House of Representatives. Title 13 of the U.S. Code sets out the basic laws under which the Census Bureau conducts the census.

## Derived Measures

Census data products include various derived measures, such as medians, means, and percentages, as well as certain rates and ratios. Derived measures that round to less than 0.1 are normally indicated as 0 .

## Disclosure Avoidance (DA)

Statistical methods used in the tabulation of data prior to releasing data products to ensure the confidentiality of responses.

## Family

A group of two or more people who reside together and who are related by birth, marriage, or adoption.

## Field Follow-Up

Field follow-up (FU) in the Pacific Island Areas was an operation designed to collect missing questionnaires, follow-up on questionnaires that failed edit, and verify housing units classified as vacant. This operation was designed to improve data quality and coverage.

## Geocoding

A code assigned to identify a geographic entity; to assign an address (such as a housing unit, business, industry, farm) to the full set of geographic code(s) applicable to the location of that address on the surface of Earth.

## Group Quarters

A facility where people live that is not a typical household-type living arrangement. The Census Bureau classifies all individuals not living in housing units as living in group quarters. There are two types of group quarters: institutional (for example, correctional facilities, nursing homes, and mental hospitals) and noninstitutional ( for example, college dormitories, military barracks and military ships, maritime vessels, group homes, missions, and shelters).

## Household

Household refers to all of the people who occupy a housing unit.

## Housing Unit

A housing unit is a house, an apartment, a mobile home or trailer, a group of rooms, or a single room occupied as a separate living quarters, or if vacant, intended for occupancy as a separate living quarters. Separate living quarters are those in which the occupants live separately from any other individuals in the building and that have direct access from outside the building or through a common hall. For vacant units, the criteria of separateness and direct access are applied to the intended occupants whenever possible.

## Imputation

When information is missing or inconsistent, the Census Bureau uses a method called imputation to assign values. Imputation relies on the statistical principle of "homogeneity," or the tendency of households within a small geographic area to be similar in most characteristics. For example, the value of "rented" is likely to be imputed for a housing unit not reporting on owner/renter status in a neighborhood with multiunits or apartments where other respondents reported "rented" on the census questionnaire. In past censuses, when the occupancy status or the number of residents was not known for a housing unit, this information was imputed.

## Interpolation

Interpolation frequently is used in calculating medians or quartiles based on interval data and in approximating standard errors from tables. Linear interpolation is used to estimate values of a function between two known values. Pareto interpolation is an alternative to linear interpolation. In Pareto interpolation, the median is derived by interpolating between the logarithms of the upper and lower income limits of the median category. It is used by the Census Bureau in calculating median income within intervals wider than $\$ 2,500$.

## List/Enumerate

In the Pacific Island Areas, a method of data collection in which temporary field staff, called enumerators, list each residential address, spot the location of each on a census map, and pick up the completed ACR or interview the residents of the household during a single visit. This completes the census address list for these areas, provides the information needed to update the TIGER database, and provides a starting point for building a Master Address File for the Pacific Island Areas (see definitions below).

## Master Address File (MAF)

A computer-based file of addresses. Information collected from Census 2000 will be used as the starting point for building a MAF for American Samoa, Guam, and the Commonwealth of the Northern Mariana Islands.

## Metadata

Information about the content, quality, condition, and other characteristics of data.

## Quality Assurance (QA)

Quality assurance represents a broad philosophy and specific procedures that are designed to build quality into the system, constantly improve the system, and integrate responsibility for quality with production.

## Questionnaire Mailing Strategy

For Census 2000 in the Pacific Island Areas, the United States Post Office delivered an Advance Letter and Advance Census Reports (ACRs) to residential postal customers in the Pacific Island Areas. Respondents were instructed to complete the form and hold it for an enumerator to pick up.

## Seasonal/Recreational/Occasional Use

A housing unit held for occupancy only during limited portions of the year, such as a beach cottage, or time-share condominium.

## Separate Living Quarters

Those living quarters in which the occupants live separately from any other individual in the building and which have direct access from outside the building or through a common hall. For vacant units, the criteria of separateness and direct access are applied to the intended occupants whenever possible.

## Service-Based Enumeration (SBE)

An operation designed to enumerate people at selected service locations that serve people without conventional housing. The SBE locations include shelters, soup kitchens, and targeted nonsheltered outdoor locations.

## Service Locations

Locations where clients are enumerated during the service-based enumeration operation, such as emergency or transitional shelters, soup kitchens, and targeted nonsheltered outdoor locations.

## Simplified Enumerator Questionnaire (SEQ)

In the Pacific Island Areas, if a household did not complete their Advanced Census Report (ACR) or did not receive an ACR in the mail, enumerators were instructed to conduct an interview at the household using the "simplified enumerator questionnaire" designed for personal interview situations. This questionnaire also was used for transient, or T-night enumeration, and when conducting field follow-up in the Pacific Island Areas.

## Soup Kitchens

Includes soup kitchens, food lines, and programs distributing prepared breakfasts, lunches, or dinners. These programs may be organized as food service lines, bag or box lunches, or tables where people are seated, then served by program personnel. These programs may or may not have a place for clients to sit and eat the meal. These are service locations.

## Special Place

A place containing one or more group quarters where people live or stay other than the usual house or apartment. Examples are colleges and universities, nursing homes, hospitals, and prisons. Special places may have both group quarters and housing units associated with them.

## Special Place Update

Special Place Update was a procedure used in the Pacific Island Areas to verify location information for living quarters at special places. The Crew Leader Assistant interviewed an official at each special place for the purpose of collecting address information for the special place and any associated group quarters and housing units, determining the type of special place/group quarters, and map spotting the special place and any housing units and/or group quarters associated with it.

## State Data Center (SDC)

A state agency or university facility identified by the governor of each state or state equivalent to participate in the Census Bureau's cooperative network for the dissemination of census data. SDCs also provide demographic data to local agencies participating in the Census Bureau's statistical areas programs and assist the Census Bureau in the delineation and identification of statistical areas. For Census 2000 activities in American Samoa, CNMI, and Guam the State Data Center was the Department of Commerce.

## Summary File (SF)

A series of census summary tabulations of population and housing data available for public use on CD-ROM and the Internet. In 1990, these files were available on computer tapes and, as a result, were known as summary tape files (STF).

## Summary Table

A collection of one or more data elements that are classified into some logical structure either as dimensions or data points.

## Tabulation Block

A physical block that does not have any legal or statistical boundaries passing through it; or each portion of a physical block after the Census Bureau recognizes any legal or statistical boundaries that pass through it.

## Targeted Nonsheltered Outdoor Location

A geographically identifiable outdoor location open to the elements where there is evidence that people who do not usually receive services at shelters and soup kitchens might be living without paying to stay there. These sites must have a specific location description that allows a census enumeration team to physically locate the site and excludes pay-for-use campgrounds, drop-in centers, post offices, hospital emergency rooms, and commercial sites (including all-night theaters and all-night diners).

## Title 13 (United States Code)

The law under which the Census Bureau operates and that guarantees the confidentiality of census information and establishes penalties for disclosing this information.

## Topologically Integrated Geographic Encoding and Referencing (TIGER)

A computer database that contains a digital representation of all census-required map features (streets, road, rivers, and so forth), the related attributes for each (street names, etc.), and the geographic identification codes for all entities used by the Census Bureau to tabulate data for the Pacific Island Areas. The TIGER database records the interrelationships among these features, attributes, and geographic codes and provides a resource for the production of maps and entity headers for data tabulations.

## Transient Night (T-Night)/T-Night Enumeration (TNE)

A method of enumeration in which Census Bureau staff enumerate people at transient locations, such as campgrounds at race tracks, recreational vehicle campgrounds or parks, commercial or public campgrounds, fairs and carnivals, and marinas. Enumerators conduct a personal interview using a Simplified Enumerator Questionnaire. No vacant units are generated by this operation.

## Type of Enumeration Area (TEA)

A classification identifying how the Census Bureau takes the decennial census of a geographic area. Examples of TEAs include (1) the area inside the "blue line" - this is the mailout/mailback and urban update/leave operations area, (2) address listing areas, (3) list/enumerate areas, and (4) remote areas of Alaska. American Samoa, Guam, and the CNMI were TEA(3) - list/enumerate areas.

## Usual Home Elsewhere (UHE)

A housing unit that is temporarily occupied by a person(s) who has a usual home elsewhere.

## Usual Residence

The place where a person lives and sleeps most of the time.

## Whole Household Usual Home Elsewhere (WHUHE)

See Usual Home Elsewhere.

## Appendix D. Questionnaire

## Census 2000 Guam

This is the official form for all the people at this address. It is quick and easy, and your answers are protected by law. Complete the Census and help your community get what it needs - today and in the future!

## Start Here <br> Please use a black or blue pen. Do NOT mail this form, your completed form will be picked up by a census worker.

How many people were living or staying in this house, apartment, or mobile home on April 1, 2000?

Number of people
INCLUDE in this number:

- foster children, roomers, or housemates
- people staying here on April 1, 2000 who have no other permanent place to stay
- people living here most of the time while working, even if they have another place to live

DO NOT INCLUDE in this number:

- college students living away while attending college
- people in a correctional facility, nursing home, or mental hospital on April 1, 2000
- Armed Forces personnel living somewhere else
- people who live or stay at another place most of the time

Please turn the page and print the names of all the people living or staying here on April 1, 2000.

Please fill out your form promptly. A census worker will visit your home to pick up your completed questionnaire or assist you if you have questions.

The Census Bureau estimates that, for the average household, this form will take about 41 minutes to complete, including the time for reviewing the instructions and answers. Comments about the estimate should be directed to the Associate Director for Finance and Administration, Attn: Paperwork Reduction Project 0607-0860, Room 3104, Federal Building 3, Bureau of the Census, Washington, DC 20233.
Respondents are not required to respond to any information collection unless it displays a valid approval number from the Office of Management and Budget.

## List of Persons

Please be sure you answered question 1 on the front page before continuing.
(2) Please print the names of all the people who you indicated in question 1 were living or staying here on April 1, 2000.
Example - Last Name
$J|O| H|N| S|O| N|||||\mid$
First Name
R|O|B|/|N|| $|=|| |$

Start with the person, or one of the people living here who owns, is buying, or rents this house, apartment, or mobile home. If there is no such person, start with any adult living or staying here.

Person 1 - Last Name

Person 4 - Last Name

Person 5 - Last Name

First Name

## Person

Your answers are important! Every person in the Census counts.

1 What is this person's name? Print the name of
Person 1 from page 2.
Last Name

First Name

2 What is this person's telephone number? We may contact this person if we don't understand an answer. Area Code + Number

3 What is this person's sex? Mark X ONE box.Male
Female
What is this person's age and what is this person's date of birth?
Age on April 1, 2000

Print numbers in boxes.

What is this person's ethnic origin or race?

(For example: Chamorro, Samoan, White, Black, Carolinian, Filipino, Japanese, Korean, Palauan, Tongan, and so on.)

What is this person's marital status?Now married
Widowed
Divorced
Separated
Never married
(7)
a. At any time since February $\mathbf{1 , 2 0 0 0}$, has this person attended regular school or college? Include only pre-kindergarten, kindergarten, elementary school, and schooling which leads to a high school diploma or a college degree.No, has not attended since February $1 \rightarrow$ Skip to 8a
Yes, public school, public college
Yes, private school, private college
b. What grade or level was this person attending? Mark (X) ONE box.Pre-kindergarten
Kindergarten
Grade 1 to grade 4
Grade 5 to grade 8
Grade 9 to grade 12
College undergraduate years (freshman to senior)
Graduate or professional school (for example: medical, dental, or law school)

8 a. What is the highest degree or level of school this person has COMPLETED? Mark $\mathbb{X}$ ONE box. If currently enrolled, mark the previous grade or highest degree received.No schooling completed
Pre-kindergarten to 4th grade
5th grade or 6th grade
7th grade or 8th grade
9th grade
10th grade
11 th grade
12th grade, NO DIPLOMA
HIGH SCHOOL GRADUATE — high school DIPLOMA or the equivalent (for example: GED)
Some college credit, but less than 1 year
1 or more years of college, no degree
Associate degree (for example: AA, AS)

15
Is this person a dependent of an active-duty or retired member of the Armed Forces of the United States or of the full-time military Reserves or National Guard? "Active duty" does NOT include training for the military Reserves or National Guard.Yes, dependent of an active-duty member of the Armed ForcesYes, dependent of retired member of the Armed Forces, or dependent of an active-duty or retired member of full-time National Guard or Armed Forces ReserveNo

## Person 2 (continued)

16 a. Did this person live in this house or apartment 5 years ago (on April 1, 1995)?Person is under 5 years old $\rightarrow$ Skip to 35
Yes, this house $\rightarrow$ Skip to 17
No, different house
b. Where did this person live 5 years ago?

Name of island, U.S. state, commonwealth, territory, or foreign country. If outside this Area, print the answer below and skip to 17.

FOR OFFICE USE ONLY

c. Name of city, town, or village

> FOR OFFICE USE ONLY

Does this person have any of the following long-lasting conditions:
$\begin{array}{lll}\text { a. Blindness, deafness, or a severe } & \text { Yes } & \text { No } \\ \text { vision or hearing impairment? }\end{array} \quad \bigcirc \quad \square$
b. A condition that substantially limits one or more basic physical activities such as walking, climbing stairs, reaching, lifting, or carrying?

18 Because of a physical, mental, or emotional condition lasting 6 months or more, does this person have any difficulty in doing any of the following activities:
a. Learning, remembering, or concentrating?
b. Dressing, bathing, or getting around inside the home?
c. (Answer if this person is 16 YEARS OLD OR OVER.) Going outside the home alone to shop or visit a doctor's office?
d. (Answer if this person is 16 YEARS OLD OR OVER.) Working at a job or business?
(19) Was this person under 15 years of age on April 1, 2000?Yes $\rightarrow$ Skip to 35
20 a. If this person is female, how many babies has she ever had, not counting stillbirths? Do not count stepchildren or children she has adopted.None $\rightarrow$ Skip to 21a

3

515 or more
b. What was the date of birth of the last child born to this person? Print numbers in boxes.

21 a. Does this person have any of his/her own grandchildren under the age of 18 living in this house or apartment?Yes
No $\rightarrow$ Skip to 22a
b. Is this grandparent currently responsible for most of the basic needs of any grandchild(ren) under the age of 18 who live(s) in this house or apartment?Yes
No $\rightarrow$ Skip to 22a
c. How long has this grandparent been responsible for the(se) grandchild(ren)? If the grandparent is financially responsible for more than one grandchild, answer the question for the grandchild for whom the grandparent has been responsible for the longest period of time.Less than 6 months
6 to 11 months
1 or 2 years
3 or 4 years
5 years or more
a. Has this person ever served on active duty in the U.S. Armed Forces, military Reserves, or National Guard? Active duty does not include training for the Reserves or National Guard, but DOES include activation, for example, for the Persian Gulf War.Yes, now on active duty
Yes, on active duty in past, but not now
No, training for Reserves or National Guard only $\rightarrow$ Skip to 23No, never served in the military $\rightarrow$ Skip to 23
b. When did this person serve on active duty in the U.S. Armed Forces? Mark Xa box for EACH period in which this person served.April 1995 or laterAugust 1990 to March 1995 (including Persian Gulf War)September 1980 to July 1990May 1975 to August 1980Vietnam era (August 1964—April 1975)February 1955 to July 1964Korean conflict (June 1950—January 1955)World War II (September 1940—July 1947)Some other time
c. In total, how many years of active-duty military service has this person had?Less than 2 years
2 years or more

## Person 2 (continued)

23 LAST WEEK, did this person do ANY work for either pay or profit? Answer "Yes" even if the person worked only 1 hour, or helped without pay in a family business or farm for 15 hours or more, or was on active duty in the Armed Forces. Also indicate whether the person did subsistence activity last week, such as fishing, growing crops, etc., NOT primarily for commercial purposes. Mark (X) ONE box.Yes, worked for pay or profit; did NO subsistence activityYes, worked for pay or profit AND did subsistence activityNo, did NOT work for pay or profit; did subsistence activity $\rightarrow$ Skip to 27aNo, did NOT work for pay or profit; did NO subsistence activity $\rightarrow$ Skip to 27a

24 At what location did this person work LAST WEEK? Do not include subsistence activity. If this person worked at more than one location, print where he or she worked most last week.
a. Name of island, U.S. state, commonwealth, territory, or foreign country

b. Name of city, town, or village

25 a. How did this person usually get to work LAST WEEK? Do not include transportation to subsistence activity. If this person usually used more than one method of transportation during the trip, mark $\boldsymbol{X}$ the box of the one used for most of the distance.Car, truck, or private van/busPublic van/busBoatTaxicabMotorcycleBicycleWalkedWorked at home $\rightarrow$ Skip to 29Other method
If "Car, truck, or private van/bus" is marked in 25a, go to 25b. Otherwise, skip to 26a.
5 b. How many people, including this person, usually rode to work in the car, truck, or private van/bus LAST WEEK?Drove alone2 people3 people4 people5 or 6 people
7 or more people
a. What time did this person usually leave home to go to work LAST WEEK?

b. How many minutes did it usually take this person to get from home to work LAST WEEK?
Minutes

Answer questions 27-28 for persons who did not work for pay or profit last week. Others skip to 29.
a. LAST WEEK, was this person on layoff from a job?

Yes $\rightarrow$ Skip to 27c
O N
b. LAST WEEK, was this person TEMPORARILY absent from a job or business?
Yes, on vacation, temporary illness, labor dispute, etc. $\rightarrow$ Skip to 28No $\rightarrow$ Skip to 27d
c. Has this person been informed that he or she will be recalled to work within the next 6 months OR been given a date to return to work?Yes $\rightarrow$ Skip to 27eNo
d. Has this person been looking for work during the last 4 weeks?
○ Y
YesNo $\rightarrow$ Skip to 28
e. LAST WEEK, could this person have started a job if offered one, or returned to work if recalled?Yes, could have gone to workNo, because of own temporary illnessNo, because of all other reasons (in school, etc.)

When did this person last work, even for a few days? Do not include subsistence activity.2000199919981995 to 19971990 to $1994 \rightarrow$ Skip to 331989 or earlier $\rightarrow$ Skip to 33Never worked; or did subsistence only $\rightarrow$ Skip to 33

## Person 2 (continued)

29 Industry or Employer - Describe clearly this person's chief job activity or business last week. If this person had more than one job, describe the one at which this person worked the most hours. If this person had no job or business last week, give the information for his/her last job or business since 1995.
a. For whom did this person work? If now on active duty in the Armed Forces, mark X this box $\rightarrow$ and print the branch of the Armed Forces.

Name of company, business, or other employer

b. What kind of business or industry was this? Describe the activity at location where employed. (For example: hospital, fish cannery, watchmaker, auto repair shop, bank)

c. Is this mainly — Mark X ONE box.Manufacturing?Wholesale trade?Retail trade?Other (agriculture, construction, service, government, etc.)?

## 30 Occupation

a. What kind of work was this person doing? (For example: registered nurse, machine repairer, watch maker, auto mechanic, accountant)

FOR OFFICE
USE ONLY

b. What were this person's most important activities or duties? (For example: patient care, repairing machinery, making watches, repairing automobiles, reconciling financial records)

Was this person — Mark XONE box.Employee of a PRIVATE-FOR-PROFIT company or business or of an individual, for wages, salary, or commissionsEmployee of a PRIVATE NOT-FOR-PROFIT, tax-exempt, or charitable organizationLocal or territorial GOVERNMENT employee (territorial/ commonwealth, etc.)Federal GOVERNMENT employeeSELF-EMPLOYED in own NOT INCORPORATED business, professional practice, or farmSELF-EMPLOYED in own INCORPORATED business, professional practice, or farmWorking WITHOUT PAY in family business or farm
a. LAST YEAR, 1999, did this person work at a job or business at any time? Do not include subsistence activity.Yes
No $\rightarrow$ Skip to 33
b. How many weeks did this person work in $1999 ?$ Count paid vacation, paid sick leave, and military service; do not count subsistence activity.
Weeks
c. During the weeks WORKED in 1999, how many hours did this person usually work each WEEK? Do not include subsistence activity.
Usual hours worked each WEEK

INCOME IN 1999 - Mark X the "Yes" box for each income source received during 1999 and enter the total amount received during 1999 to a maximum of \$999,999. Mark 【 the "No" box if the income source was not received.
If net income was a loss, enter the amount and mark X the "Loss" box next to the dollar amount.

For income received jointly, report, if possible, the appropriate share for each person; otherwise, report the whole amount for only one person and mark X the "No" box for the other person. If exact amount is not known, please give best estimate.
a. Wages, salary, commissions, bonuses, or tips from all jobs - Report amount before deductions for taxes, bonds, dues, or other items.Yes Annual amount - Dollars
$\square \mathrm{N}$
b. Self-employment income from own nonfarm businesses or farm businesses, including proprietorships and partnerships - Report NET income after business expenses.Yes Annual amount - DollarsNo
Loss

## CENSUS 2000 DATA PRODUCTS—GUAM

Census 2000 for Guam yields a wealth of data, which have virtually unlimited applications. A complete list of Census 2000-Guam data products, with their release status, is available at http://www.census.gov/population/www/censusdata/sch_guam.html.

Detailed results of Census 2000—Guam are in a single file titled Guam Summary File. A Demographic Profile for Guam can be accessed through the Internet and on CD-ROM or DVD. A printed report is planned for release in 2003 and will be available in Portable Document Format (.pdf) on the Internet.

## Internet and CD-ROM/DVD Products

Internet. For Internet access to all Census 2000-Guam information, select American FactFinder ${ }^{\text {TM }}$ on the Census Bureau's home page (www.census.gov). Generally, most data products are released first on the American FactFinder, followed by subsequent releases in other media.

CD-ROM and DVD. Census 2000—Guam tabulations and maps are available on CD-ROMs and/or DVDs. Viewing software will be included on most CDs. CD-ROMs may be ordered by phone through the Census Bureau's Customer Services Center on 301-763-INFO (4636), or via e-commerce by selecting Catalog from the Census Bureau's home page. For more information on ordering options, access the Census Catalog's product order form at https://catalog.mso.census.gov.

Summary File-Guam. This file presents counts and basic cross-tabulations of information collected from all people and housing units. Population items include sex; age; ethnic origin and race; household relationship; households and families; urban and rural; group quarters; children ever born (fertility); citizenship status and year of entry; disability; grandparents as caregivers; language spoken at home and frequency of English usage; marital status; place of birth; parents’ place of birth; migration and main reason for moving; place of work; journey to work (commuting); school enrollment and educational attainment; vocational training; military dependency; veteran status; class of worker; employment status; income; industry; occupation; and poverty status. Housing items include air conditioning; battery-operated radio; condominium status; household size; monthly rent; mortgage status; number of bedrooms; number of rooms; occupants per room; occupancy status; plumbing and kitchen facilities (bathtub or shower, toilet facilities, cooking facilities); sewage disposal; shelter costs; source of water; telephone service; tenure; type of building materials; units in structure; value of home; vehicles available; water supply; year moved into unit; year structure built; and vacancy status.

Public Use Microdata Sample (PUMS) Files. Microdata products allow users to prepare their own customized tabulations and cross tabulations of most population and housing subjects, using specially prepared microdata files. These files are the actual responses to census questionnaires, but with names or addresses removed and the geography sufficiently broad to protect confidentiality. There is a single Public Use Microdata (PUMS) file planned for Guam. It is a 10 -percent sample of the entire area.

## Printed Report

Census 2000: Social, Economic, and Housing Characteristics (PHC-4). This report is the sole printed report for Census 2000-Guam. It will include information on detailed population and housing characteristics to the place level. It will be available on the Internet (.pdf format). The report also will be available for purchase through the U.S. Government Printing Office. For more availability information, see the Census Bureau's online catalog.

## CENSUS 2000 MAPS AND GEOGRAPHIC PRODUCTS

A variety of maps, boundary files, and other geographic products are available to help users locate and identify geographic areas. These products are available in various media, such as the Internet, CD-ROM, DVD, and for maps, as print-on-demand products.

TIGER/Line ${ }^{\text {TM }}$ files. These files contain geographic boundaries and codes, streets, and coordinates for use with geographic information systems (GIS) for mapping and other applications.

Census block maps. These maps show the boundaries, names, and codes for each of the Pacific Island Areas, county equivalent areas, places, census tracts, and census blocks. This map series will be produced for each county equivalent, MCD, and place.

Census tract outline maps. These county equivalent based maps show boundaries and number of census tracts and names of features underlying the boundaries. They also show the boundaries, names, and codes for county equivalent areas, MCDs, and places.

Reference maps. This series shows the boundaries for tabulation areas including the Pacific Island Areas, county equivalent areas, MCDs, and places. This series includes the state and county subdivision outline maps and urban area maps. These maps vary in size from wall to page size.

Generalized boundary files. These files are designed for use in a geographic information system (GIS) or similar computer mapping software. Boundary files are available for most levels of census geography.

## REFERENCE MATERIALS

The reference materials for Census 2000-Guam are available at the Census Bureau's Internet site (www.census.gov) or, in the case of CD-ROMs/DVDs, files are on the product itself.

Census online catalog. Census 2000 data products, including availability and prices, are described in the Catalog portion of the Web site. The catalog can be reached from the Census Bureau home page by selecting Catalog from the side bar.

American FactFinder™. American FactFinder (AFF) is the system that presents comprehensive data from Census 2000-Guam as well as other data programs via the Internet. The AFF home page URL is factfinder.census.gov/. It also can be reached from www.census.gov by selecting American FactFinder in either the Subjects A to Z side bar or by directly selecting the American FactFinder side bar. Both bars are located on the left side of the screen.

Technical documentation. Technical documentation includes an abstract, a how-to-use chapter, the table layouts, the summary level sequence chart, the subject and geographic glossaries, accuracy of the data, and the data dictionary. CD-ROM and DVD products include the relevant technical documentation file on the disc. Technical documentation for files released on CD-ROM/DVD is available on the Web site at http://www.census.gov/prod/cen2000/index.html.

## SOURCES OF ASSISTANCE

U.S. Census Bureau. The Census Bureau's Customer Services Center sells the Census 2000Guam CD-ROM and DVD products. These can be ordered via e-commerce from the Census Catalog at https://catalog.mso.census.gov/ or by telephoning Customer Services at 301-763-INFO (4636).

The Census Bureau has a Puerto Rico and Island Areas Branch that is actively involved in preparing decennial materials for Guam and other Island Areas. They can be reached at 301-763-9331.

Superintendent of Documents, U.S. Government Printing Office (GPO). The GPO (www.gpo.gov) handles the sale of most of the federal government's publications, including the planned Census 2000-Guam report. The GPO online bookstore is available at http://bookstore.gpo.gov/index.html. For the current information on ordering publications from GPO, see http://bookstore.gpo.gov/support/index.html.

State Data Centers. The Census Bureau furnishes data products, training in data access and use, technical assistance, and consultation to all states, the District of Columbia, Puerto Rico, American Samoa, Guam, the Commonwealth of the Northern Mariana Islands, and the U.S. Virgin Islands. State Data Centers (SDCs), in turn, offer publications for reference, printouts from computer tape, specially prepared reports, maps, and other products and assistance to data users. A component of the program is the Business and Industry Data Center (BIDC) Program, which supports the business community by expanding SDC services to government, academic, and nonprofit organizations that directly serve businesses. For a list of SDC/BIDCs, including their services and their Web sites, access http://www.census.gov/sdc/www/.

For information about the State Data Center program in Guam, please contact the Census Bureau's State Data Center program office at 301-457-1305.

Census Information Centers. The Census Information Center (CIC) program is a cooperative activity between the Census Bureau and national nonprofit organizations representing interests of racial and ethnic communities. The program objective is to make census information and data available to the participating organizations for analysis, policy planning, and for further dissemination through a network of regional and local affiliates. For a listing of the organizations and the contacts, access http://www.census.gov/clo/www/cic.html.

The Census Bureau's Customer Liaison Office administers both the SDC and CIC programs. For more information on programs of that office, access http://www.census.gov/clo/www/clo.html.

## INTRODUCTION

There are two map series that support Census 2000 Guam summary file data dissemination; the Census 2000 Block Map and the Census Tract Outline Map (Census 2000). The Census Bureau will produce each of these map types in 2 formats, Adobe's Portable Document Format (PDF) and Hewlett Packard's Graphic Language 2 (HP-GL/2). The PDF files will be available through the Census Bureau's American FactFinder and as DVD products. These maps will also be available as paper plots, which can be ordered from the Census Bureau. All Census 2000 map products can be ordered from Customer Services, U.S. Census Bureau (301-763-INFO (4636)).

## MAP DESCRIPTIONS

## Census 2000 Block Maps

These large-scale maps depict the smallest geographic entities for which the Census Bureau presents data, census blocks. Census 2000 block maps will be produced for American Indian/Alaska Native/Hawaiian home land areas, counties, county subdivisions, and places. The maps show the boundaries, names, and codes for American Indian/Alaska Native/Hawaiian home land areas, counties, county subdivisions, places, census tracts and blocks. Base feature details, such as roads, railroads, and water features are also shown. The intent of this map series is to produce a layout of maps for each entity on the smallest possible number of map sheets at the maximum practical scale, dependent on the areal size of the entity and the density of the block pattern; the latter affects the display of block numbers and feature identifiers. Each entity will be covered by one or more parent sheets at a single scale, and when necessary, inset maps at larger scales. For entities that are mapped on two or more map sheets, an index map showing the map sheet configuration will also be produced.

## Census Tract Outline Map (Census 2000)

These maps show the boundaries and numbers of the census tracts as well as the named features underlying the boundaries. They also show the boundaries, names and codes for American Indian/Alaska Native/Hawaiian home land areas, counties, county subdivisions, and places. The scale of the maps will be optimized to keep the number of map sheets for each area to a minimum, but the scale and number of sheets will vary by the areal size of the county and the complexity of the census tracts.

## GROUP QUARTERS

This code list was used by special place enumerators in Census 2000.

| GQ | Staff residents ${ }^{1}$ |
| :--- | :--- |
| Codes | GQ Codes |

Codes GQ Codes
A. College Quarters (501)

501 - 1. Dormitories and Fraternity and Sorority Houses (on and off campus)
B. Correctional Institutions (101-107)
$101 \quad 905$

1. Federal Detention Centers (including U.S. Park Police, Bureau of Indian Affairs, Immigration and Naturalization Service (INS) centers operated within local jails, and state and federal prisons. INS detention centers also include INS Federal Alien Detention Facilities, INS Service Processing Centers, and INS Contract Detention Centers used to detain aliens under exclusion or deportation proceedings and aliens who require custodial departures.)
${ }^{1}$ Staff residing at the group quarters (GQ) are counted in the same GQ as other residents when no GQ code is provided.

## GROUP QUARTERS—Con.

This code list was used by special place enumerators in Census 2000.

## GQ Staff residents ${ }^{1}$ <br> Codes GQ Codes

## D. Dormitories (601, 901-905)

| 901 | - |  | Agriculture Workers' Dormitories on Farms (including migratory farm workers' camps, bunkhouses for ranch hands, and other dormitories on farms including those on "tree farms") |
| :---: | :---: | :---: | :---: |
|  |  | 2. | College Student Dormitories, and Fraternity and Sorority Houses (see Section A above) |
| 904 | - | 3. | Dormitories for Nurses and Interns in Military Hospitals |
| 905 | - | 4. | Dormitories for Nurses and Interns in General Hospitals |
| 601 | - | 5. | Military Quarters on Base, Including Barracks (unaccompanied personnel housing (UPH) (Enlisted/Officer), and similar group living quarters for military personnel) |
| 902 | - |  | Other Workers' Dormitories (including logging camps, construction workers' camps, firehouse dormitories, job-training camps, energy enclaves (Alaska only), Alaskan pipeline camps, nonfarm migratory workers' camps such as workers who lay oil and gas pipelines) |
| 903 | - |  | Job Corps and Vocational Training Facilities for Persons Above the High School Level |

E. Emergency Shelters/Service Locations (701-706)
701 -

1. Shelters for the Homeless With Sleeping Facilities (including emergency housing, missions, and flophouses, Salvation Army shelters, hotels and motels used entirely for homeless persons, hotels or motels used partially for the homeless, and similar places known to have persons with no usual home elsewhere who stay overnight)

| 702 | - |
| :--- | :--- |
| 703 | - |
|  |  |
| 704 | - |
| 705 | - |
| 706 | - |

2. Shelters for Runaway, Neglected, and Homeless Children
3. Shelters for Abused Women (or Shelters Against Domestic Violence)
4. Service Locations
a. Soup kitchens
b. Regularly scheduled mobile food vans
5. Targeted Nonsheltered Outdoor Locations
F. Group Homes/Halfway Houses (801-810) (with 10 or more unrelated persons (801-805) and with 9 or less unrelated persons (806810): Including those providing community-based care and supportive services. For enumeration purposes, group homes were classified into ten type codes: 801 to 810 . The classification was based upon expected size of the group home. For tabulation purposes, group homes were collapsed into five categories: 801 to 805.)
NOTE: Do not include halfway houses operated for correctional purposes. If operated for correctional purposes, code according to Section B3.
6. Drug/Alcohol Abuse (group homes, detoxification centers, quarterway houses (residential treatment facilities that work closely with an accredited hospital); halfway houses; recovery homes for ambulatory, mentally competent recovering alcoholics who may be re-entering the work force)
${ }^{1}$ Staff residing at the group quarters (GQ) are counted in the same GQ as other residents when no GQ code is provided.

## GROUP QUARTERS-Con.

This code list was used by special place enumerators in Census 2000.

| GQ | Staff residents ${ }^{\mathbf{1}}$ |

| 400 | 905 |

401904
402905
2. Mentally III
3. Mentally Retarded
4. Physically Handicapped
5. Other Group Homes (including communes, foster care homes, and maternity homes for unwed mothers)
G. Hospitals and Wards, Hospices, and Schools for the Handicapped (400-410)

1. Dormitories for Nurses and Interns in Military Hospitals
2. Dormitories for Nurses and Interns in General Hospitals
3. Drug/Alcohol Abuse (hospitals and hospital wards in psychiatric and general hospitals)
4. Chronically III
a. Military hospitals or wards for chronically ill
b. Other hospitals or wards for chronically ill (including tuberculosis hospitals or wards; wards in general and veterans' hospitals for the chronically ill; wards for progressive or degenerative brain diseases, such as neuro-degenerative process, spinal cord tumor, or other neurologic diseases; wards for patients with Hansen's Disease (leprosy) and other incurable diseases; and other unspecified wards for the chronically ill)

NOTE: Do not include mental or drug/alcohol abuse hospitals or wards.
c. Hospices/homes for chronically ill (including hospices and homes for AIDS and cancer patients, and other unspecified terminal diseases.
5. Mentally III (Psychiatric) (hospitals or wards, including wards for the criminally insane not operated by a prison and psychiatric wards of general hospitals and veterans' hospitals. This is a medical setting designed for the treatment of mental illness. Patients receive supervised and medical/nursing care from formally trained staff)
6. Mentally Retarded (schools, hospitals, wards (including wards in hospitals for the mentally ill), and intermediate care facilities for the mentally retarded (ICF/MR))
7. Physically Handicapped (including schools, hospitals, or wards in a suitably equipped medical setting and designed primarily for the physically handicapped who receive supervised care and medical/nursing care from a formally trained staff)
a. Institutions for the deaf
b. Institutions for the blind
c. Orthopedic wards and institutions for physically handicapped (including institutions providing long-term care to accident victims, and persons with polio, cerebral palsy (leads to motor dysfunction), muscular dystrophy, etc.)
NOTE: Do not include wards for terminally ill patients. Code such places as "401" military hospitals or wards for chronically ill or "402" other hospitals or wards for chronically ill.
8. General Hospitals With Patients Who Have No Usual Home Elsewhere (including maternity, neonatal, pediatric (including wards for boarder babies), Veterans' Affairs, surgical, and other purpose wards of hospitals and wards for infectious diseases)
${ }^{1}$ Staff residing at the group quarters (GQ) are counted in the same GQ as other residents when no GQ code is provided.

## GROUP QUARTERS-Con.

This code list was used by special place enumerators in Census 2000.

| GQ | Staff residents ${ }^{1}$ |
| :--- | :--- |
| Codes | GQ Codes |

410 904 $\mathbf{7 0 1}$ - \begin{tabular}{l}

9. | Military Hospitals With Patients Who Have No Usual Home Else- |

| of hospitals and wards for infectious diseases) | <br>

H. | Hotels/Motels (701) (those used entirely or partially for persons |
| :--- |
| without a usual home) | <br>

I. Juvenile Institutions (201-209) (including homes, schools, and
\end{tabular} detention centers)

1. Long-Term Care (length of stay usually more than 30 days)
a. Neglected, abused, and dependent children (orphanages, homes, or residential care)
(1) Public ownership
(2) Private ownership
(3) Ownership unknown (used as a last resort if no other type code applies)
b. Emotionally disturbed children (residential treatment centers (psychiatric care provided))
c. Delinquent children (placed by court, parents, or social service agencies in residential training schools or homes, including industrial schools, camps, or farms)
(1) Public ownership
(2) Private ownership
(3) Ownership unknown (used only as a last resort if no other type code applies)
2. Short-Term Care (length of stay usually 30 days or less)
a. Delinquent children (temporary care in detention centers, reception or diagnostic centers pending court disposition of case)
b. Runaway, neglected, and homeless children (emergency shelters/group homes which provide temporary sleeping facilities for juveniles) (see Section E2)
3. Type of Juvenile Institution Unknown (used only as a last resort if no other code applies)

## J. Military Quarters (601-603)

1. On Base:
a. Barracks, unaccompanied personnel housing (UPH) (Enlisted/ Officer), and similar group living quarters for military personnel
b. Transient quarters for temporary residents (military or civilian)
c. Dormitories for nurses and interns in military hospitals
d. Stockades and jails (on military bases)
2. Military Ships
3. Group Quarters, Misc. (for processing use only)
4. Military Hotels/Campgrounds (these locations are classified as housing units)

909 -
K. Natural Disaster (909) (includes those temporarily displaced by a natural disaster, such as "Hurricane Fran")
${ }^{1}$ Staff residing at the group quarters (GQ) are counted in the same GQ as other residents when no GQ code is provided.

## GROUP QUARTERS—Con

This code list was used by special place enumerators in Census 2000.

## GQ Staff residents ${ }^{1}$ <br> Codes GQ Codes

L. Nursing Homes (301-307) (skilled nursing facilities (SNF), intermediate care facilities (ICF), long-term care rooms in wards or buildings on the grounds of hospitals, nursing, convalescent, and rest homes including soldiers', sailors', veterans' hospitals, fraternal or religious homes for the aged with nursing care)

1. Public Ownership
a. Federal ownership (including veterans' hospitals, domiciliary homes, and U.S. Naval homes)
b. State, county, or city ownership
c. Don't know if federal, state, county, or city ownership (used only as a last resort if no other type code applies)
2. Private ownership
a. Private not-for-profit
b. Private for-profit
c. Don't know if for-profit or not-for-profit (used only as a last resort if no other type code applies)
3. Don't Know If Federal, State, Local, or Private Ownership (used only as a last resort if no other type code applies)
906 -
M. Religious Group Quarters (906) (including convents, monasteries, and rectories (classify members of religious orders who live in a dormitory at a hospital or college according to the type of place where they live, such as college or hospital dormitories))
911 -
N. Residential Care Facilities Providing "Protective Oversight" (911)
O. Schools for the Handicapped (see Sections G6 and G7)
P. Service Locations and Emergency Shelters (see Section E)

913 -
Q. Other Household Living Situations "Dangerous Encampments" (913) (these locations are classified as housing units)

908
R. Other Nonhousehold Living Situations (908) (including those not covered by other GQ codes shown herein, such as hostels, YMCA's, and YWCA's)
910 -
S. Transient Locations (910) (including commercial or public campgrounds, campgrounds at racetracks, fairs, carnivals, and similar transient sites. These locations are classified as housing units.)
${ }^{1}$ Staff residing at the group quarters (GQ) are counted in the same GQ as other residents when no GQ code is provided.

Note:
The Census 2000 occupational classification has 509 categories. Of these, 369 exactly match SOC detailed categories; another 127 match the SOC at its broad category or minor group level. There are 13 aggregates of multiple SOC categories that do not have an exact match to a single SOC code. Since each of the 13 aggregates contains more than one SOC equivalent, the Census Bureau will us an " $X$ " or " $X X$ " designation in tabulations that show data for these aggregates. These aggregates are as follows:

| Census Code and Title | SOC Designation and Title | SOC Code |
| :---: | :---: | :---: |
| 073 - Other Business Operations Specialists | 13-11XX - Miscellaneous Business Operations Specialists including Emergency Management Specialist | $\begin{aligned} & 13-1061 \\ & 13-1199 \end{aligned}$ |
