

Willow Beach National Fish Hatchery

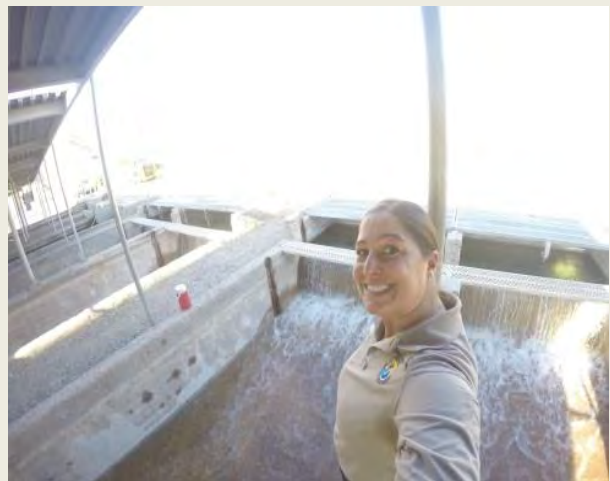

July 2016 Monthly Report

A selection was made for the Maintenance Worker position and the individual declined the position. In addition the next potential candidate accepted another position. Filling this position is still in process.

Heidi Stream started this month in a newly classified Biological Science Technician position. The Administrative Technician position was converted to this new classification to better suit the facility needs.

The new trout water pumping system is still under construction. Bernie Freeman traveled to WB for an inspection and to develop a final punch list. The pump representative, designing engineer, electricians and the project manager were all here for the system started up. The startup went well the pumps flowed water as they should. The contractor is now working on the flow meter installation and the remaining punch list.

July 2016 Monthly Report

Achii Hanyo Native Fish Rearing Facility

The biologist selected for Achii Hanyo showed up one day and left the next. This unexpected declination of the position forced a re-advertisement which leads into the new procedure for getting approvals to hire positions. Long story short it will be weeks to months before the approval to advertise that position again. Willow Beach staff continues to cover the workload at Achii.

Maintenance activities included chain link fence repair; pond treatments for anchor worm; weed control and painting.

Upcoming Activities

- Completion of the new pumping system
- Preparation for trout production and delivery of trout
- Hire the Maintenance Worker position
