1. Introduction

Welcome to the National Environmental Public Health Tracking Network User Guide.

Environmental causes of chronic diseases are hard to identify. Measuring amounts of hazardous substances in our environment in a standard way, tracking the spread of these over time and geography, seeing how they show up in human tissues, and understanding how they may cause illness is critical but very difficult to do. The National Environmental Public Health Tracking Network (Tracking Network) is CDC's effort to combine data for some of these components into one resource to benefit public health.

The Tracking Network is a system of integrated health, exposure, and hazard information and data from a variety of national, state, and city sources. On the Tracking Network, you can explore information and view maps, tables, and charts about health and the environment across the country.

The chapters in this manual are:

- **Becoming Familiar with the Tracking Network Public Portal**

A guide through the main topics of the Public Portal.

- **Navigating and Using the Tracking Network Public Portal**

Lessons in navigating the Public Portal—how to find information and documentation, and how to display data.

- **The Tracking Network Secure Portal**

An introduction to the secure portal—what it contains, and how to access it.

- **Frequently Asked Questions**

A list of questions users most often ask.

If you have technical questions about the Tracking Network contact us at 1-877-923-8722 or email us at trackingsupport@cdc.gov.

2. Becoming Familiar with the Tracking Network Public Portal

This chapter focuses on becoming familiar with portal content through the navigation links and the four interactive areas featured on the home page: *Environments*, *Health Effects*, *Population Data*, and *Info by Location*. Figure 1 below is the Tracking Network Public Portal home page which is located at www.cdc.gov/ephracking/.

2.1 Environments

From the home page, the *Environments* link provides access to the environmental health topics included in the Tracking Network.

Figure 1. Tracking Network Public Portal Home Page

From the Environments screen, select any of the main headings—*Climate Change*, *Community Design*, *Homes*, *Outdoor Air*, or *Water*. (Figure 2)

Figure 2. Options available from the *Environments* screen

As an example, click on the main heading, *Homes*.

From this page you can:

1. Learn about two major health effects associated with housing: childhood lead poisoning and carbon monoxide (CO) poisoning.
2. Read how public health information is collected about lead and CO exposures in the home.
3. Learn about contaminants in the home. At this time the Tracking Network contains information about lead and CO.
4. Learn about how the Tracking Network uses childhood lead poisoning and carbon monoxide data.
5. View related resource links.
6. Read about the *Blood Lead Testing and Housing Age* indicators.
7. Go directly to the *Data Query and Results* page.
8. View Tracking Success Stories – Click on the Tracking Success Stories links to see how states utilized the Tracking Network to research and solve a problem.

See Figure 3 below.

See Section 3.2 for the Data Query and Results page example and steps.

Figure 3. The *Homes* option from the *Environments* screen

In each area you will find more specific information, related links, and a way to search for data for that topic. The other *Environments* pages (*Outdoor Air*, *Water*, *etc.*) will have a similar layout.

You can access some of these sections quickly from the *Environments* home page as well. The first *Homes* subheading is *Homes and Health*.

Homes

- [Homes and Health](#) ←
- [Tracking Housing Conditions](#)
- [Search Homes Data](#)

This link opens a page that details two major health issues associated with exposures in the home—childhood lead poisoning and CO poisoning. To learn more, click on the links for each condition. (Figure 4)

Homes and Health

The connection between housing and health is well established. People spend half of every day, sometimes more, inside their homes. Clearly, the housing environment is one of the major influences on health and well-being. As early as the mid-19th century, physicians advocated healthy housing to reduce death and illness among the poor.

Many modern housing and building codes can be traced to the public health responses to epidemics that occurred with the rapid industrialization and urbanization in Western countries a hundred years ago. In the mid-20th century, however, housing and health agencies became separated organizationally, which resulted in less focus on preventing housing-related disease and illness.

Recently, the public health community renewed its interest in promoting healthy housing. Several research studies have shown improved health outcomes from policies that targeted living conditions, especially housing.

CDC provides data on the National Environmental Public Health Tracking Network (EPHTN) to better understand how housing conditions affect health.

On this website, information is available about two major health effects associated with housing: [childhood lead poisoning](#) and [carbon monoxide poisoning](#).

Childhood Lead Poisoning

Between 1999 and 2004, an estimated 240,000 children 1-5 years of age had elevated blood-lead levels, and most of these levels were caused by lead paint-hazards in and around their homes. Lead exposure causes lasting damage to a child's neurodevelopment and behavior problems. In fact, in high amounts lead can be deadly. Although it is no longer used, lead-based paint poisoned millions of children.

Carbon Monoxide Poisoning

Carbon monoxide (CO) poisoning is one of the leading causes of unintentional poisoning deaths in the United States. CO is a colorless, odorless gas that is given off whenever fuel or other materials are burned. Between 2001 and 2003, more than 15,000 Americans were treated in hospital emergency departments for non-fire-related CO exposure; 64% of these exposures occurred in the home. CO poisoning can cause shortness of breath, neurobehavioral effects, and even death. Low-level CO exposure may cause irregular heartbeat and damage to the heart muscle.

Figure 4. The *Homes and Health* subheading

From the Environments home page, the second subheading is *Tracking Housing Conditions*.

Tracking Housing Conditions

The Tracking Network currently contains data on one key indicator associated with homes: lead poisoning testing in children. Soon the Network will also have data on the number of jurisdictions with CO detector laws. These two indicators provide information on environmental conditions that are associated with housing conditions and that can cause adverse health effects, ([childhood lead poisoning](#) and [CO poisoning](#)).

Childhood Lead Poisoning

The Network uses multiple data sources to develop measures of blood-lead testing, housing age, and poverty for this indicator. CDC's [Childhood Lead Poisoning Prevention Program](#) compiles information from state and local childhood lead poisoning-prevention programs to track childhood blood-lead testing and levels. CDC's Childhood Lead Poisoning Prevention Program provides technical and financial assistance to state and local programs and provides national guidance and policy on preventing and treating childhood lead poisoning. Data on housing age and the number of children living in poverty are available from the 2000 census. Finally, birth-record data collected and reported annually by state vital statistics offices provides information about the number of births in a specific year or birth cohort.

A [heart attack](#) is also called a myocardial infarction. It is a medical condition that occurs when the blood supply to a part of the heart is interrupted. The resulting blood or oxygen shortage causes damage and potential death of heart tissue. As of 2007, about 7.9 million Americans age 20 and older have survived a heart attack, according to the American Heart Association.

Heart Attacks and the Environment ← 1

According to the American Heart Association, "studies have demonstrated a consistent risk for cardiovascular events in relation to both short- and long-term exposure to present-day concentrations of ambient particulate matter." ← 2

Increasingly, investigators both in the United States and abroad have shown relationships between exposure to short and long term exposure to particulate air pollution and the increased risk of myocardial infarction, referred to as heart attack, and other forms of coronary heart disease. A number of studies have reported associations between air pollution and hospitalizations for heart attacks and other forms of heart disease. For example, researchers have demonstrated increases in heart attack hospitalization rates in relation to fine particles (PM2.5), particularly in sensitive groups, such as the elderly, patients with pre-existing heart disease, survivors of heart attack, or people with chronic obstructive pulmonary disease.

Tracking Heart Attacks

Currently, the United States does not have a single [heart attack](#) surveillance system, nor does a surveillance system exist for [coronary heart disease](#) in general. [Mortality](#) is the primary descriptor for national data for heart attacks. Estimates of [incidence](#) and [prevalence](#) of heart attacks and coronary heart disease are largely based on survey samples (e.g., National Health and Nutrition Examination Survey and National Ambulatory Care Survey) or large cohort studies such as the Atherosclerosis Risk in Communities (ARIC) study.

Tracking [hospital admissions](#) for heart attacks will help with:

- examination of time trends in hospital admissions;
- [identification](#) of any seasonal patterns;
- assessment of geographic differences in hospital admissions;
- evaluation of differences in heart attack hospital admissions by age, gender, and [race/ethnicity](#); and
- determination of populations in need of targeted interventions.

The Tracking Network is using hospital admission dates to count the cases of heart attacks. Other public health programs use the hospital discharge dates to count the cases of heart attacks. This counting variance may cause a difference in heart attack rates between the Tracking Network and other public health Web sites.

Biomonitoring: Population Exposures

Chemicals are substances that are a part of everyday lives. Environmental chemicals are found in air, water, food, soil, dust, or consumer products. They can be natural or man-made. We know that some of them cause disease or illness in people. However, for most chemicals, we do not know if low level environmental exposures affect our health.

Scientists at CDC have been determining which environmental chemicals people have been exposed to by measuring how much of those chemicals actually get into people's bodies. This is called biomonitoring. Most biomonitoring involves measuring the amount of a chemical or its breakdown product (metabolite) that is in a small sample of a person's blood or urine. The amount of the chemical or metabolite in the blood or urine depends on the amount of the chemical that has entered the body from exposure pathways like eating, drinking, breathing, and touching. This amount represents the amount of a chemical that entered the body from all sources and through all exposure pathways combined.

2.4 Info by Location

From the home page, the *Info by Location* section will allow you to search available data by state. (Figure 14)

Figure 14. *Info by Location* on the home page

Choosing the *Info by Location* link opens a map of the United States. You can then select criteria for a state specific search. (Figure 15)

Step 1 - Select a state by clicking on it from the map.

Step 2 - Select a content area, indicator, and measure. Click the *GO* button to be taken to the *Data query and Results* page.

2.4.1 Content Areas, Indicators, and Measures

The drop down menus under **Step 2: Select your content area** are dynamic. (Figure 15) This means your *Indicator* and *Measure* selections will adjust based on the content area selection you start with, proceeding from more general categories to more specific categories.

Content Area (the starting point for data categorization in the Tracking Network) is the general health effect or environmental area about which you want more information. In the example, *Homes* is selected as the content area. (Figure 14) From that selection the next drop down menu displays only *Indicators* pertaining to *Homes*.

Indicators are available within each content area. For Tracking, an indicator is one or more items, characteristics or other things that will be assessed and that provide information about a population's health status, their environment, and other factors with the goal of allowing us to monitor trends, compare situations, and better understand the link between environment and health. It is assessed through the use of direct and indirect measures (for example levels of a pollutant in the environment as a measure of possible exposure) that describe health or a factor associated with health (such as environmental hazard or age) in a specified population. In the example above, the available indicator for the content area Homes is “Blood Lead Testing and Housing Age.”

Measures are available for each indicator. On the Tracking Network, a measure is a summary characteristic or statistic, such as a sum, percentage, or rate. In the above example, an available measure for the content area Homes is “Number of Houses Built between 1950 to 1979.”

Section 3.1.3 is dedicated to helping you navigate through the Info by Location feature.

See Section 3.2 for the Data Query and Results page example and steps.

2.5 Quick Links, Tracking Hot Topics, and Resources

2.5.1 Quick Links

Quick links appear on the right side of the Tracking Portal home page. Here is an example of the Quick Links: (Figure 16)

Figure 16. Tracking home page quick links

Home

Clicking the Home link from anywhere in the portal will return you to the Tracking Network home page.

About Tracking Program

This links to background information about the Tracking Program. It provides detailed information about the Program and its underlying concepts.

State and Local Tracking Portals

Here you can access the tracking portals of the 24 state and local health departments that are part of the National Tracking Network. (Figure 17)

State and Local Tracking Portals

The Tracking Program provides information communities can use to improve their health. This information comes from a nationwide network that integrates health data and environmental data. CDC's Tracking Program has laid the foundation of this national system by providing grants to state and local health departments.

CDC funds health departments in 23 states and 1 city to build and implement local tracking networks. These state and local data systems feed into the national Tracking Network. Previous projects by these grantees have improved information technology through better infrastructure, expanded environmental public health tracking capacity, and trained public health workers. Most importantly, grantees have developed better ways to make information accessible on the Tracking Network to those who need it to take action, such as policy makers and public health officials.

Indicators and Data

Here you can search for information on environmental Indicators and metadata.

(Figure 18)

Indicators
An [environmental public health indicator](#) provides information about a population's health status with respect to environmental factors. Tracking Indicators were developed in collaboration with national, state, and local environmental health partners. Here you can access detailed information about each indicator available on the Tracking Network.

View Indicator Definitions and Documentation:
Content Area:
Select Content Area
Indicator:
GO

Search for Data
Metadata are "data about data". Metadata describe the content, quality, and context of a dataset and provide links to additional information such as quality assurance documents and data dictionaries. The Tracking Network contains metadata records for datasets used to create the Tracking Indicators and for datasets maintained by national, state, and local environmental health partners.

Search Data-Indicators and Data:
Type in Keywords:
GO Advanced Search

Figure 18. Indicators drop down list and Data search box

Indicators

Indicators are available within each content area. For Tracking, an indicator is one or more items, characteristics or other things that will be assessed and that provide information about a population's health status, their environment, and other factors with the goal of allowing us to monitor trends, compare situations, and better understand the link between environment and health. It is assessed through the use of direct and indirect measures (for example levels of a pollutant in the environment as a measure of possible exposure) that describe health or a factor associated with health (such as environmental hazard or age) in a specified population. From here, you can select a content area and indicator that will return a chart that includes:

- indicator type,
- measure derivation information,
- geography,
- time period and scale,
- rationale,
- limitations of the data source, and
- access to the data query and results page and more.

See Section 3.3, which explains Indicator use.

Search for Data

Generally speaking, metadata are data about data. Metadata describe the content, quality, and context of a dataset and provide links to additional information such as quality assurance documents and data dictionaries. From here you can search for and view the detailed metadata reports available on the Tracking Network Public Portal.

See Section 3.4, Search and View Metadata.

Secure Portal

The next option in Quick Links is the Tracking Network's Secure Portal. This is a separate Web-based system that provides access to resources for environmental and public health practitioners and researchers. To gain access you must register, have an appropriate professional need, and a digital certificate from CDC's Secure Data Networks. The secure portal employs rigorous security measures to protect potentially private and confidential health information.

See Chapter 4.0 for detailed information about the Secure Portal.

What is the National Environmental Public Health Tracking Network?

The National Environmental Public Health Tracking Network (Tracking Network) is a system of integrated health, exposure, and hazard information and data from a variety of national, state, and city sources.

On the Tracking Network, you can view maps, tables, and charts with data about:

- chemicals and other substances found in the environment
- some chronic diseases and conditions
- the area where you live

Figure 28. Data Query and Results page from the Info by Location link.

3.2 The Data Query and Results Page

See Figure 29 below to view the features of the Data Query and Results page.

By using these data, you signify your agreement to comply with the following requirements:

1. Use the data for statistical reporting and analysis only.
2. Do not attempt to learn the identity of any person included in the data and do not combine these data with other data for the purpose of matching records to identify individuals.
3. Do not disclose or make use of the identity of any person or establishment discovered inadvertently and report the discovery to: trackingsupport@cdc.gov
4. Do not imply or state, either in written or oral form, that interpretations based on the data are those of the original data sources and CDC unless the data user and data source are formally collaborating.
5. Acknowledge, in all reports or presentations based on these data, the original source of the data and CDC.

Figure 29. The Query and Results page

If this is your first time composing a query on our public portal please click on the First Time User tab in the upper right hand corner of the page. Here you will find information about how to compose a query and how to use the icons you will see.

On the *Query and Results page* multiple data and display options are available. The *Query and Results page* is where you will find detailed data related to all the content areas on the Tracking Network. You can search by single or multiple states, counties, or years. The data will automatically display first in a map, if one is available, but you can choose the chart view or table view tabs as well.

The first three steps involve selecting a *Content Area*, *Indicator*, and *Measure*.

Content Area (the starting point for data categorization in the Tracking Network) is the general health effect or environmental area about which you want more information. In the above example, *Asthma* is selected as the *Content Area*. From that selection, the next drop down box displays only *Indicators* pertaining to *Asthma*.

Indicators are available within each content area. For Tracking, an indicator is one or more items, characteristics or other things that will be assessed and that provide information about a population's health status, their environment, and other factors with the goal of allowing us to monitor trends, compare situations, and better understand the link between environment and health. It is assessed through the use of direct and indirect measures (e.g. levels of a pollutant in the environment as a measure of possible exposure) that describe health or a factor associated with health (i.e., environmental hazard, age) in a specified population.

Measures are available for each indicator. On the Tracking Network, a measure is a summary characteristic or statistic, such as a sum, percentage, or rate.

Now, we will step through the Query and Results process. Depending on how you came to this page you may be able to skip steps 1 and 2, they may already be populated.

Note that as you build your query a trail of your selections is written so you can see the options you have chosen.

Heart Attack | Hospitalizations for Heart Attack | Crude rate of hospitalization for heart attack among persons 35 and over per 10,000 population | Multiple Geo | 2003

Step 1. Select a *Content Area* from the drop down box.

Step 2. Select an *Indicator* from the drop down box.

Step 3. Select a *Measure* from the drop down box.

Step 4. Once you have selected your *Content Area*, *Indicator*, and *Measure*, you will only see state and county options for which data were reported to the Tracking Network. If all 50 states have data to view, then all 50 states will populate the geography.

Step 4a. In addition, some selections will not allow you to query data at the county level. Only if you see drop down arrow next to a state, can you expand it to select specific counties. To see data for all counties for a selected state(s) check the *All Counties* box. Counties will be selected automatically. To make your own county selection uncheck All Counties and expand the list.

Step 5. After you have made your geography selections, select a time period. The years available also vary by the data provided to the Tracking Network. The time options will populate after a geography selection is made.

If you want to change the state, year, or both, click *Clear Geography* or *Clear Time*.

At this point you can skip to Step 8 and select *RUN QUERY*. If you need to make more selections, continue to Step 6.

Step 6. To see smoothed data, if available, check the box for *Apply smoothing to view pattern across counties*.

Smoothed data is the average of a measure based on the information about that area and the areas around it. Smoothing is only available for some measures and can only be applied at the county level. You must select All Counties to apply smoothing. **If you choose to view these data smoothed, do not attempt to interpret the results for any single county, but instead, use the data to identify patterns across the state.**

Smoothing borrows information from neighboring areas to stabilize results from

sparsely populated areas. Smoothing is used to reduce variability in the data, allowing patterns to emerge.

Step 6a. Additional information about an option can be found by choosing this icon .

Step 7. The advanced options contain additional filters that may include Ethnicity, Gender, Race, and Age Group.

Step 8. Click *Run Query* to view the results. Note the use agreement below the query panel options. (Figure 30)

Disclaimer:

By using these data, you signify your agreement to comply with the following requirements:

1. Use the data for statistical reporting and analysis only.
2. Do not attempt to learn the identity of any person included in the data and do not combine these data with other data for the purpose of matching records to identify individuals.
3. Do not disclose or make use of the identity of any person or establishment discovered inadvertently and report the discovery to: trackingsupport@cdc.gov.
4. Do not imply or state, either in written or oral form, that interpretations based on the data are those of the original data sources and CDC unless the data user and data source are formally collaborating.
5. Acknowledge, in all reports or presentations based on these data, the original source of the data and CDC.
6. Suggested citation: Centers for Disease Control and Prevention. National Environmental Public Health Tracking Network. (n.d.) Web. Accessed: 10:53 3/30/2012. www.cdc.gov/ephrtracking.

Figure 30. Data Query and Results page use agreement

The results panel will populate and you will see four tabs. Three of them let you view the results in map, table, or chart format. The default for every query is a map. If a map is not available the view will default to a chart. See Step 8d for more details about maps. The fourth tab is About These Data, where footnotes are located.

From any of these four views you can utilize the print, share, and csv options.

Clicking the Query Details icon will display the selection made for the current query.

Clicking the Print icon allows you to print the current view of the query results.

Clicking the Share icon will open a dialog box with a hyperlink to the query you just created that you can then copy and paste.

Clicking the CSV icon will export the table results into a CSV file that you can download and save to open in excel or other application of your choice.

Step 8a. Select *Map View* to view results in a map. If the data are insufficient or not appropriate for generating a map this tab will be grayed out.

If you select multiple states, the system will return a map with all states for which data are available, but only those states you selected will appear on your tables and charts. This also applies to counties within the states. (Figure 31)

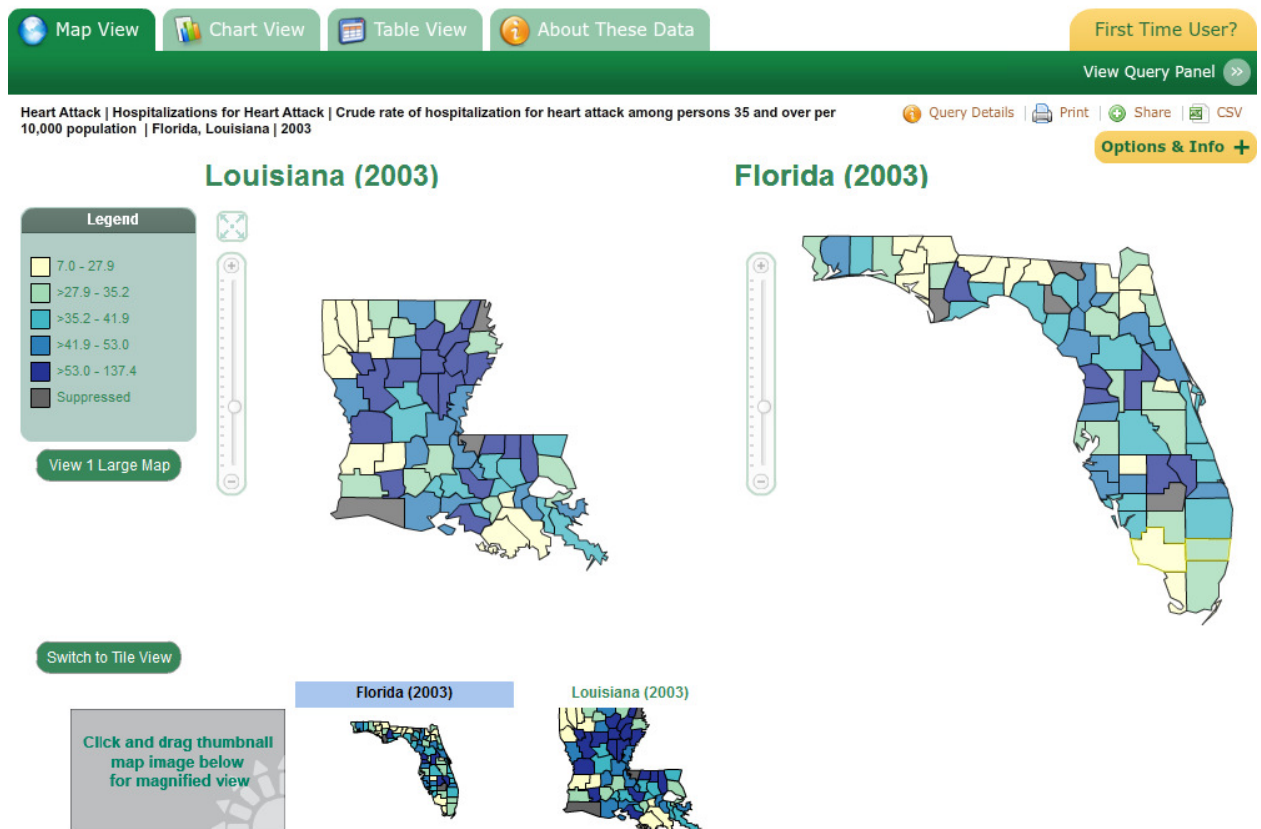

Figure 31. Map view results

Additional features of the map view:

Initial extent – Return the maps to their original size.

Switch to Tile View

Tile view – Use to view multiple maps as tiled icons.

Zoom – Zoom in and out of maps.

View 2 Large Maps

View 1 Large Map

View 1 or 2 Large Maps – Maps of individual states (the same or different) can be viewed side by side using this option. Maps of the same state in this view can be linked to zoom at the same rate.

Link Maps - Link two maps of the same state together.

AK & HI Insets – When available, click to bring Alaska and Hawaii into view.

Options & Info +

Options & Info – Expand for additional features of the map view and other information related to your query. (Figure 32) Once inside you will see the following map view options:

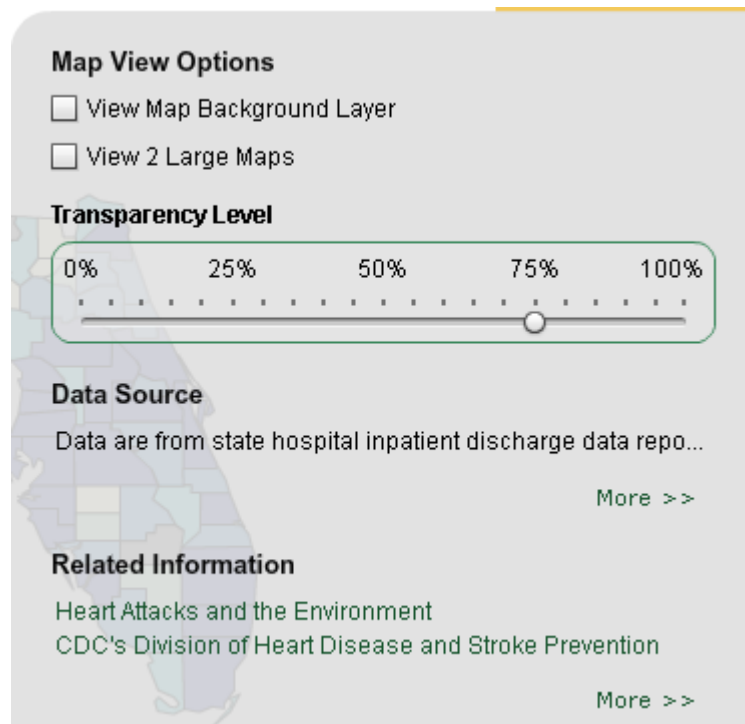

Figure 32. Data Query and Results Map View Options

View Map Background Layer – Turn on the map background layer to see roads and bodies of water.

View 2 Large maps – Performs the same as the above view large map example. Maps of individual states (the same or different) can be viewed side by side using this option. Maps of the same state in this view can be linked to zoom at the same rate.

Transparency Level – Alter the transparency of the base layer of the map. This works best when used with the map background layer.

Data Source – Expand for information about where the data you are viewing came from.

Related Information – See footnotes and links to pages within the Tracking Network or partner websites that provide background information about the topic you have chosen.

Step 8b. From the tabs, select *Chart View* to view results graphically. (Figure 33)

Figure 33. The Data Query and Results chart view

Additional features of the chart view:

Flip Axis – View chart in a horizontal or vertical bar chart.

Hide Suppression and No Data Bars – Use to change the results to only show locations with data displayed.

Step 8c. Select Table View to view results in a table. (Figure 34)

When viewing tables you may see red asterisk (***) symbols and color coding.

The *** symbols means the value is a non-zero count less than 6 and corresponding rates have been suppressed (hidden from view) to protect confidentiality.

Numbers highlighted in red are rates or measures with a relative standard error greater than 30%, are unstable (created based on a small number), and have been highlighted or suppressed to prevent misinterpretation.

Map View | Chart View | **Table View** | About These Data

Figure 34. The Data Query and Results table view

Additional Features of the Table View:

States and county columns can be sorted alphabetically. The time period column can also be sorted numerically and the years reordered for a more customized view.

Step 8d. Select *About These Data* for a description of the data you are about to view. These may also be referred to as footnotes which are associated with the results you receive and are based on the categories you have chosen. They provide information about the measure’s source, quality, and general characteristics.

3.3 Query Indicators

From the home page:

Step 1. Click the *Indicators & Data* link under Quick Links.

Figure 35. Tracking home page quick links

Step 2. From the drop down lists on the *Indicators* section, select a *Content Area* and an *Indicator*. (Figure 36)

Step 3. Click *Go*.

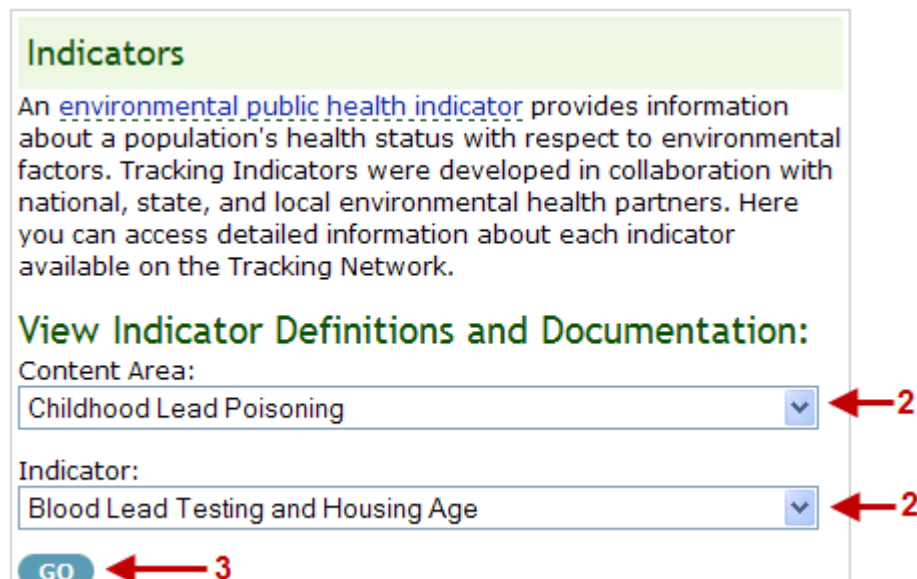

Figure 36. Indicator Definitions and Documentation lookup screen

A chart will appear that lists the indicator type, Tracking related measures, geography, time, rationale for choosing this measure for the Tracking Network, use of and limitations on the measures' data source. (Figure 37)

Indicator: Blood Lead Testing and Housing Age

Content Area: [View Maps, Tables and Charts](#)

Indicator:

Type of EPHT Indicator	Hazard /Intervention
Measures	<ol style="list-style-type: none"> 1. Number of children born in the same year and tested for lead before age 3 2. Percent of children born in the same year and tested before age 3 3. Number of homes built before 1950 (as measured in the 2000 Census) 4. Number of homes built between 1950 and 1979 (as measured in the 2000 Census) 5. Percent of homes built before 1950 (as measured in the 2000 Census) 6. Percent of homes built between 1950 and 1979 (as measured in the 2000 Census)
Derivation of Measure(s)	<p>Use birth year cohort to calculate the percentage of children with at least one ZIP test prior to age 36 months.</p> <p>Use 2000 Census, Summary file 3, to calculate the percentage of pre-1950 housing units and percentage of children under 5 living in poverty.</p> <p>Merge testing and housing data files by geography.</p>
Unit	Tested child Proportion of houses by age-based hazard assessment
Geographic Scope	State and national (tracking network states)
Geographic Scale	county and state
Time Period	Begin with year 2000 birth cohort and repeat for each succeeding birth cohort once they reach age 3 years.
Time Scale	Annual
Rationale	<p>Elevated BLLs in young children have been associated with adverse health effects ranging from learning impairment and behavioral problems to death. Because children may have elevated BLLs and not have any specific symptoms, CDC recommends a blood-lead test for young children at risk for lead poisoning. Risk factors identified in the National Health and Nutrition Examination Surveys (NHANES) include living in housing built before 1950, especially deteriorating condition, being African American and living in a family in poverty.</p> <p>Many states have adopted a targeted testing strategy (test children at high risk), and some states recommend universal testing (test all young children). Nevertheless, studies have documented low blood-lead testing rates among children at high risk. CDC recommends that state and local childhood lead poisoning prevention programs (CLPPPs) evaluate testing among high-risk populations. All CLPPPs have assessed testing in their states but many methods have been used and it is not possible to compare across states.</p> <p>CLPPPs also administer education campaigns for physicians and parents about childhood lead poisoning to enable them to identify children at risk.</p> <p>For both universal testing plans and targeted testing plans, children should be tested at least once before the age of 3 years. Some states require more than one test between the ages of 6 and 36 months. Using a birth cohort, the number of children born in a specific year tested before the age of 36 months can be determined.</p>
Use of the Measure	<p>Identify populations that are not being tested adequately and improve testing</p> <p>Allow for a better understanding of what the blood-lead surveillance data represent</p> <p>Allow for comparison across states; such comparison can be used to target interventions (especially CDC, EPA, HUD)</p> <p>Identify communities at risk and the percentage of children being tested.</p> <p>Identify children who should be tested for lead by identifying high-risk communities</p>
Limitations of the Measure	<p>This measure estimates testing rates in children living in communities which may be at greater risk of exposure due to older housing. It is a surrogate for a child's risk of lead poisoning due to lead paint in the home. A more direct measure would be based on individual children and the actual age of their housing.</p> <p>Some tested children's addresses are not in the CLPPP data system, while only the provider's address is provided for other children. This can result in some tests being attributed to the wrong ZIP code or not being counted at all.</p> <p>Using number of pre-1950s housing from Census does not account for houses that have been renovated or have had lead removed.</p> <p>This measure does not account for other lead sources in the community.</p> <p>Children may be exposed to lead paint in neighboring counties (visiting family, day care)</p> <p>Many states require children be tested more than once. This indicator does not determine how many children are tested more than once to meet such state requirements.</p>
Data Sources	<ol style="list-style-type: none"> 1. Childhood Blood Lead Testing Surveillance data 2. US Census (Summary file 3) 3. Vital statistics birth data for number of births
Limitations of Data Sources	<p>Childhood blood-lead surveillance data</p> <ul style="list-style-type: none"> • Surveillance data are not randomly sampled or representative of the population. • Addresses for all children tested are not included. • Address of the treating clinic is listed sometimes as the address of the child. • Race and ethnicity are not always captured. <p>Census data</p> <ul style="list-style-type: none"> • Data are available only every 10 years. • Information on renovation of pre-1950 housing is not available. • Information on the condition of the housing is not available. • Address level information on the year the housing was built is not available. <p>Vital Statistics Birth Data</p> <ul style="list-style-type: none"> • Children may move to another ZIP code or county after birth

Figure 37. Indicator screen from the *Indicators & Data link*

From this screen you can modify your selections or click on *View Maps, Tables and Charts* to go directly to the Data Query and Results page.

See Section 3.2 for the Data Query and Results page example and steps.

3.4 Search and View Metadata

From the home page:

Step 1. Click the *Indicators & Data* link

Figure 38. Tracking home page quick links

Under the **Search for Data** section, you will find a keyword search.

Step 2. Enter a keyword and click *GO* to perform a general metadata search.

(Figure 39)

Note: Only keywords found in the metadata records will return a result. If you have used a word that is not found in any metadata record, you will not see any results.

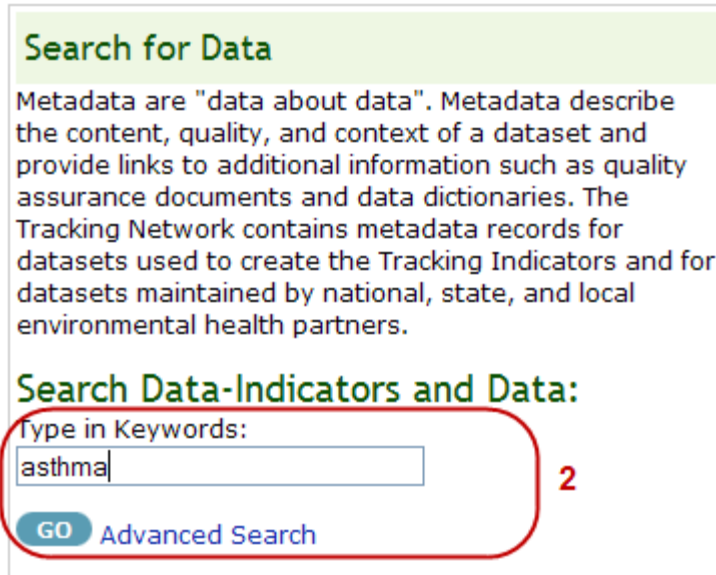

Figure 39. Data-Indicators and Data search area

The system returns a results page that displays all the metadata records that include your keyword. The description also includes the dataset title, abstract, and time period information. (Figure 40)

Metadata Summary

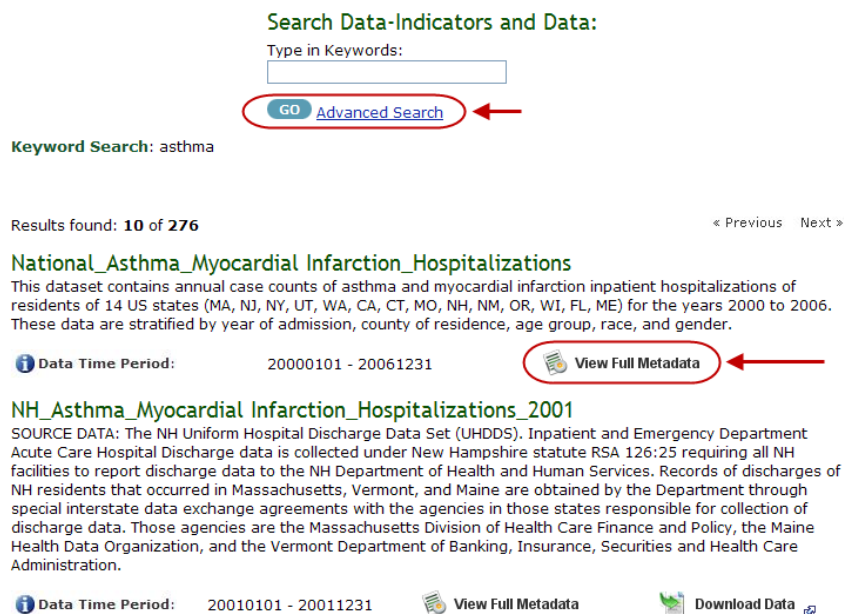

Figure 40. Metadata Summary

These results are short descriptions of the available metadata records. You can choose to view the full metadata report, which contains a complete description of the data according to the Tracking Network metadata standard.

For a more specific metadata view, perform an *Advanced Search*.

Note the *Advanced Search* option in the *Search for Data* section of the *Indicators & Data* main page. This option will allow you to refine your search further. (Figure 41)

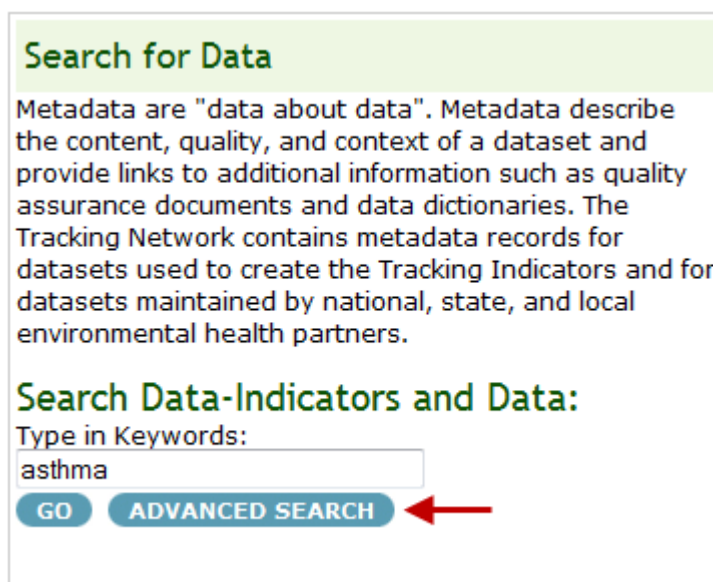

Figure 41. Metadata Advanced Search

Select the *Advanced Search Options* to open the search criteria page. (Figure 42)

Step 1. Specify a date range—or choose not to search based on time period.

Step 2. Search for keywords from the categories in the drop down list (for example Abstract, Purpose, Location, Keyword, Title). When searching more than one word you must choose an (*AND/OR*) connector.

Step 3. To see the results, click *Search*.

Figure 42. The Advanced Search screen for Metadata

3.5 Sample Search Scenarios

To conclude the *Navigating and Using the Public Portal* chapter, here are a few sample scenarios.

3.5.1 I want to learn more about arsenic in water.

From the home page

Step 1. Click *Water* under Environments. (Figure 43)

Environments

- Climate Change
- Outdoor Air
- Water ← 1
- More

Figure 43. The Environments tab

Step 2. Click *Community Water* or *More Community Water Data and Information*.
(Figure 44)

Water

All of us need clean water to drink. We can go for weeks without food, but only days without water. Contaminated water can be a threat to anyone's health, but especially to young children.

About half of our nation's drinking water comes from ground water. Most is supplied through community water systems. But many families rely on private, household wells and use ground water as their source of fresh water.

Drinking water protection programs at the state and national levels play a critical role in ensuring high quality drinking water and in protecting the public's health.

Community Water

About 90% of people in the United States get their water from a [community water system](#). These public water systems are required to provide drinking water that meets standards established under the [Safe Drinking Water Act](#). EPA establishes drinking water standards for individual contaminants and groups of contaminants.

[More community water data and information.](#) ← 2

Well Water

About 15% of Americans have their own sources of drinking water, such as household wells, cisterns, and springs. These water supplies are not regulated by the EPA. So, unlike public community water systems serving many people, they do not have experts regularly checking the water's source and its quality before it is sent through pipes to the community.

[More well water data and information.](#)

Figure 44. The Water landing page

Step 3. (Figure 45) Here you have three options. In the blue box labeled Additional Links, choose Arsenic. This will take you to information about arsenic, exposure, and prevention.

OR

Step 3a. Click the Indicator link on the same page to view a slide out of Community Water indicators. Click on *Arsenic in Community Water Systems*. This will lead you to information about this indicator, such as measure, descriptions, time period, and a scale of measures for arsenic and others.

OR

Step 3b. Click the Search Data link on the same page to open the Query and Results page. Select Arsenic in Community Water Systems as the indicator.

Quick Links

[Community Water and Health](#)

[Community Water Monitoring in the US](#)

[Community Water Contaminants](#)

The majority of Americans are provided high-quality drinking water. About 90% of people in the United States get their water from a [community water system](#). The [U.S. Environmental Protection Agency](#) (EPA) sets regulations for treating and monitoring drinking water delivered by community water systems. Water quality standards and monitoring requirements are in place for more than 90 contaminants. About 10% of people in the United States rely on smaller water supplies (mostly household wells) that are not regulated by EPA. Treatment and monitoring requirements for these small systems vary from state to state. Drinking water protection programs at the state and national levels play a critical role in ensuring high-quality drinking water and in protecting the public's health.

Indicators ← 3a

Read about the indicators available for community water

Community Water Indicators Available on the Tracking Network

Three types of indicators are used. The public water use measures provide information about the segment of the population to which the measures apply. The level of contaminant shows how well the water systems are producing high-quality water. The potential population exposure measures use estimates of the population served by water supplies to show the potential for exposure to contaminants in drinking water on a population basis. These measures together indicate the potential for public health impacts from contaminant levels of concern.

Click on an indicator to read more about it.

3.5.2 I want to learn about lead based paint in homes in my state.

From the Home page:

Step 1. Go to the Info by Location section, select a state and click the search button. (Figure 46)

Figure 46. The Info by Location state selection area

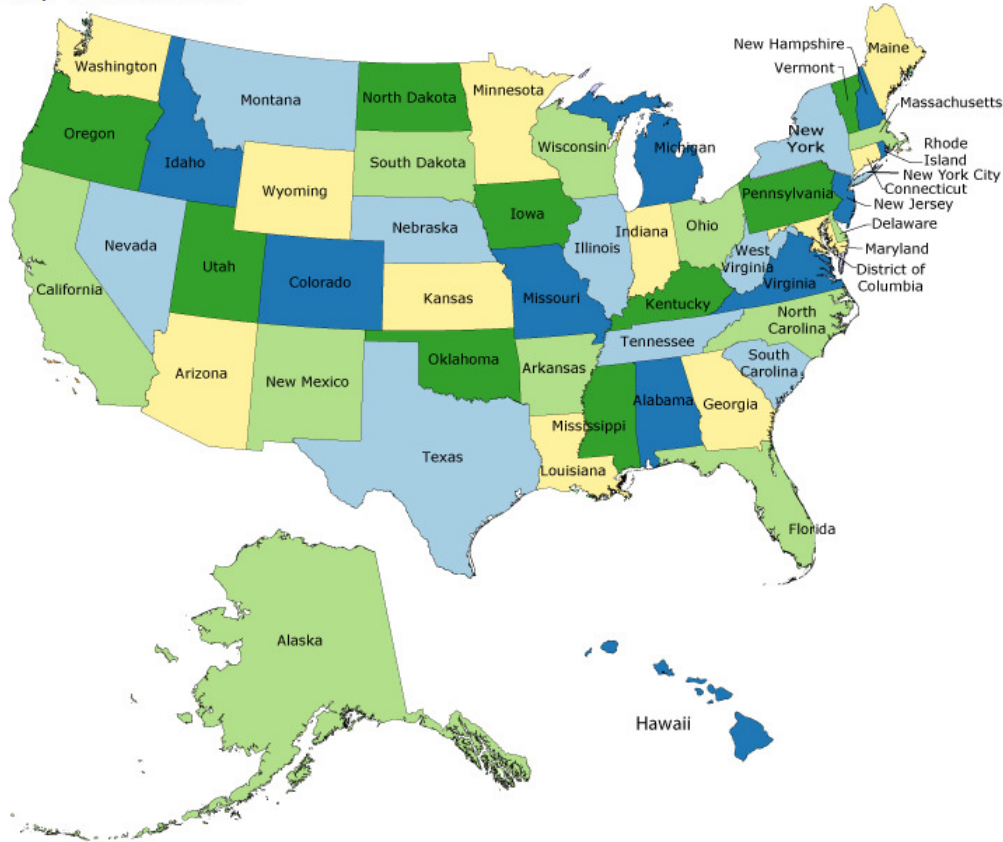

Step 2. (Figure 47) Under *Select your Content Area* choose *Homes* as the Content Area, *Blood Lead Testing & Housing Age* as the Indicator, and *Number of homes built before 1950* as the Measure.

Click *Go*.

Note: If you do not find the content area, indicator, and measure you are looking for, data is not available for that chosen state.

Query and Results

Step 1: Select a State.

Step 2: Select your content area.

You selected the state of: **Georgia**

Content Area:	Homes
Select Indicator:	Blood Lead Testing and Age of Housing
Select Measure:	Number of homes built before 1950 (as measured in the 2000 Census)
GO	

Figure 47. The Info by Location geography and content area selection screen

3.5.3 What kind of cancer information and data are on the Network.

Step 1. From the home page, click the *Health Effects* Tab. (Figure 48)

Figure 48. The Health Effects tab

Step 2. From the Cancer subheading, click *Tracking Cancer*. This will take you to information about how cancer data is tracked and provided to the Network.

4. The Secure Portal

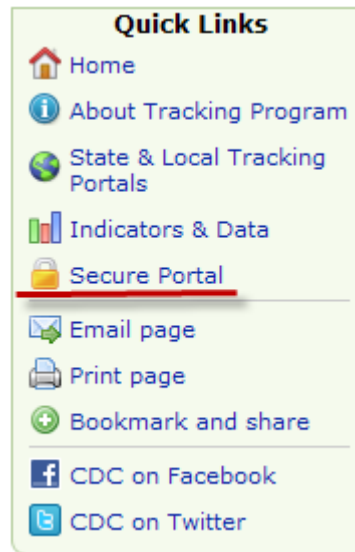

Figure 52. Tracking home page quick links

What is it?

The Tracking Network's secure portal is a Web-based system that houses the Tracking Networks nationally consistent data and measures. Through the secure portal you can view data available to the Tracking Network at a more detailed level. You can also extract the data and synthesize it in your own way, in addition to the way the Tracking Network has presented it to you through the Data Query and Results panel.

What is its purpose?

To support the implementation of the Tracking Network's nationally consistent data and measures and provide a secure, online resource center for grantees, partners, and other public health practitioners.

Who can use it?

It is intended for use by grantees, partners, public health practitioners, and researchers.

How secure is it?

To protect potentially private and confidential health information, the secure portal employs rigorous security measures.

The CDC Secure Data Network (SDN) protects content on the secure portal. The SDN, which protects sensitive CDC data, has security measures that include:

- rigorous identity proofing conducted by the CDC's registrar,
- electronic security certificates installed on accessing computers,
- role-based security measures implemented in the portal itself.

Secure users will be responsible for establishing access to SDN and installing any required security certificates. These measures are in accordance with appropriate guidance issued by the National Institute of Standards and Technology.

How can I register?

To become a registered user you must have an appropriate professional need to access the data and resources in the secure portal. (Figure 53)

Step 1 - To begin the process, fill out the Application for Access. If you are approved, you will receive an email that contains a web link to the SDN site and a password. This is your access to download the digital certificate.

Step 2 – The Digital Certificate and CDC Programs manual contain instructions for the SDN Enrollment Process, including instructions for installing the digital certificate.

Step 3 – Fill out the Data Request Form. Include a description of how the requested data will be used. The Tracking Program will forward this to the appropriate state or local Tracking Grantee who must approve your request.

Step 4 - After you are authorized to use the restricted data, you must sign a Data Use Agreement with the CDC, which will subject you to the terms of the relevant agreements between the CDC Tracking Program and data stewards or state and local Tracking Grantees.

Step 5 - When this process is complete, you can login to the Secure Portal.

Secure Portal

[Home](#) > About the secure portal

National Environmental Public Health Tracking

Login **5**

Application for Access **1**

Data Request Form for Restricted-Access Data **3**

Tracking Links

[Environments](#)

[Health Effects](#)

[Info by Location](#)

The Secure Portal is coming soon.

What is the Secure Portal?

The secure portal of the Environmental Public Health Tracking Network provides access to resources for environmental and public health practitioners and researchers. Its primary functions are to:

- support the implementation of the Tracking Network's nationally consistent data and measures
- provide a secure, online resource center for grantees, partners, and other public health practitioners.

To gain access to the secure portal, you must become a registered user. The registration process ensures that individuals requesting access have an appropriate professional need to utilize the data and resources within the secure portal. Users who are approved will receive a username and password to access the system.

Content on the secure portal will be protected through the extensive security procedures and technical mechanisms of the [CDC Secure Access Management Services \(SAMS\)](#).

Secure users will be responsible for establishing access to SAMS and completing the identity verification process. These measures are in accordance with appropriate guidance issued by the National Institute of Standards and Technology.

Becoming a Registered User and Obtaining Authorization to Access Restricted Data

To become a registered user of the Secure Portal, requestors must submit a completed [application for access](#). As detailed in CDC's [Technical Network Implementation Plan](#), registered users will include:

- CDC staff and contractors,
- Tracking grantees,
- other data partners,
- other public health and environmental practitioners, and
- researchers.

The Tracking Program will review the application to ensure the stated objectives for accessing the secure portal are consistent with the types of data, tools, and services available on this site and with the purpose for which these Network assets were developed or obtained. All approved requestors will receive a formal invitation to SAMS via email. Applicants will have 30 days to login to SAMS and begin the identity verification process.

Once the SAMS registration and identity verification processes are complete, CDC Tracking staff will be notified that the applicant has been approved and will grant the applicant access to the Secure Portal.

Registration on the Secure Portal does not automatically allow registered users access to restricted datasets. To access these datasets, Secure Portal users must submit a [data request form](#), which includes a description of how the requested data will be used. For data provided to the Tracking Network by state or local Tracking Grantees, the Tracking Program will forward the data requests to the appropriate state or local Tracking Grantees. State or local Tracking Grantees will coordinate with their data stewards to approve, reject, or request additional information from the applicant as part of their review process. State or local Tracking Grantees will provide notification of final approval or rejection of the request to the Tracking Program. If a data request is rejected, the state or local Tracking Grantee will provide a reason for the rejection.

For data provided by national sources or sources other than state or local Tracking Grantees, requests for restricted data will be handled as specified by the data sharing agreement between the CDC Tracking Program and the data steward.

Users authorized to use restricted data will sign a [data use agreement](#) with CDC and will be subject to the terms within the relevant agreements between the CDC Tracking Program and data stewards or state and local Tracking Grantees.

Figure 53. The Secure Portal screen

5. Frequently Asked Questions

Data and Content Updates

Q: How often is new data added to the Tracking Network?

A: Usually data updates or new data are added to the Tracking Network 3 to 4 times per year. We perform periodic data calls throughout the year. The data updates come from both our grantee and national datasets and occur as data is released throughout the year.

Q: Where can I find more information about the Tracking Network's data sources?

A: There is a document titled *Data Sources Overview* in the Communication Materials section of the Communication Features page on the network. It is a quick view of where data comes from for the Tracking Network.

Data and Query Results Page

Q: How do I export data?

A: From the query results click on the CSV icon in the upper right hand side of the page. Follow the prompts to download and save the file.

Q: On the query panel, when I query data for one state it returns a map of all the states. Why?

A: In order to make the maps more useful and provide proper class breaks we need to include as many states as possible. Otherwise, we would not be able to display a map. The reason for it not displaying the way you are expecting is because our maps are available at specific scales and the system determines the ideal scale on its own. The map may need to zoom a little farther out to display properly. This scaling will change as updates are added to the system.

Q: Where can I find more information about how displayed data is calculated?

A: Each content area has a detailed indicator page. You can find these under the Indicators & Data tab. Many of the indicator pages include a section titled *Derivation of Measure(s)* that describe the calculations.

Q: Why do some of the query results display “No Data” in the charts?

A: The missing data is actually correct. Not all states submit the same years of data, because their data stewards give them the data at different times. You'll find that some states have all the way up to 2009, but some only to 2006. Also, a few are missing 2000-2003 as well.

Secure Portal

Q: What is the difference between the secure portal and the public portal?

A: The public portal is designed for use by the general public. In addition to data, it also contains important information about risk, exposure, and possible prevention behaviors.

The secure portal is designed for use by environmental public health practitioners. On the secure portal more detailed data, analysis, visualization, and reporting tools are provided. The secure portal is also used to pilot and refine the information and information resources that will be provided on the public portal.

Q: How do I gain access to the secure portal?

A: The secure portal is currently under development. Detailed information for accessing the secure portal is available on the public portal and in Chapter 4 of our User Guide. The User Guide in the Document Library under the Resources section of the Public Portal.

Get Help

Q: I have been exposed to a dangerous substance, what should I do?

A: If you need immediate medical attention, call your doctor or 911. If you are looking for information about how this substance may affect your health, call or email CDC Info at 1-800-CDC-INFO (1-800-232-4636) or cdcinfo@cdc.gov.

Q: How can I submit questions, comments, or suggestions to the Tracking Network?

A: We are very interested in your comments and suggestions. You can email us at trackingsupport@cdc.gov or call us at 1-877-923-TRACK (8722)

Get Involved

Q: Who are the Tracking Network grantees?

A: Grantees are state and local health departments that receive grants to help underwrite the collection and submission of data to CDC's Tracking Network. Our current grantees are:

California	Colorado	Connecticut
Florida	Iowa	Kansas
Louisiana	Massachusetts	Maryland
Maine	Minnesota	Missouri

New Hampshire	New Jersey	New Mexico
New York	Oregon	Pennsylvania
South Carolina	Utah	Vermont
Washington	Wisconsin	New York City

Q: How can I collaborate with the Tracking Network if I am not a Grantee?

A: When you contact us at trackingsupport@cdc.gov we will put you in contact with one of our Project Officers. Project Officers collaborate with states, universities, and non-government organizations directly. The Project Office will assist you in determining how we can work with you.

Q: How can I be updated on Tracking Network news and information?

A: You can subscribe to our list-serve by emailing us at epht@cdc.gov. Please include your name, email address, and the agency or organization for which you work.
