1.0 EXECUTIVE SUMMARY

The Ohio Environmental Protection Agency (Ohio EPA) Division of Environmental Response and Revitalization (DERR) completed a Site Reassessment (SRA) at the Clyde Dump, city of Clyde, Sandusky County. The SRA was performed through a cooperative agreement with the United States Environmental Protection Agency (USEPA) Region V utilizing site investigation protocol as established under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The purpose of this SRA is to determine if the former disposal practices at the Clyde Dump are adversely impacting human health and the environment, and whether additional investigation or remedial action is needed under CERCLA.

2.0 INTRODUCTION

Ohio EPA DERR conducted the SRA of Clyde Dump, USEPA ID# OHD 980 905 251, which is located at geographical coordinates: 41°19'2.5" N; 82°59'2.5" W. Samples of water and sediment were collected to evaluate potential impacts to Raccoon Creek, which is located adjacent to the west side of the site. Samples of soil and leachate were also collected from borings located within the limits of fill. Additional borings were completed outside the fill areas to evaluate geologic and hydrologic conditions and to establish background soil conditions. The sampling occurred August 8th through August 10th, 2011. This report was prepared to discuss the findings of the SRA.

3.0 SITE BACKGROUND

3.1 Site Description

The Clyde Dump site is owned by the city of Clyde and is located in the corporation limits of the city of Clyde, Sandusky County, Green Creek Township, on a 25 acre parcel of land. The northern part of this parcel contains 10 acres of buried waste that is referred to as the Clyde Dump site, and is the subject of this SRA. The southern part of this parcel contains the Clyde Waste Water Treatment Plant (WWTP). Access to this parcel is obtained through another parcel to the south where the Clyde Fire Station is located. The address of the site is 749 West McPherson Highway, Clyde, Ohio 43410. The site is located in the northwest portion of Clyde north of State Route 20 (McPherson Hwy.) and east of Woodland Avenue (See Figure 1: Site Location Map). Surrounding land is being used for commercial, residential, and agricultural purposes. Raccoon Creek is adjacent to the west side of the dump. Raccoon Creek flows from south to north along the western limits of the fill area and enters Sandusky Bay at Pickerel Creek Wildlife Area, located several miles downstream.

A site reconnaissance visit was performed by Ohio EPA on June 28th and August 4th, 2011. A discussion with city officials regarding the site also occurred at the June 28th site visit. The following paragraphs present the findings of these reconnaissance visits and pertinent information obtained from the discussion with city officials. Please reference Figure 2: Site Features Map, for spatial relationship of surrounding properties to the site.

According to Sandusky County online GIS services, property owners abutting the west side of the site include Linda Nichols and P.A.T LLC. B&K Auto Service is located on the Nichols property and contains 9 acres of land. This property was formerly an automobile junk & salvage yard for many years. Within the past few years, the owner or operator has removed most of the junk vehicles and a large tire pile from the site. The P.A.T LLC property is a 12 acre parcel with only 400 lineal feet of its

northern boundary abutting the site. A small mobile home park is located 800 feet away from the site on the southernmost portion of the P.A.T LLC property. The remainder of this parcel is undeveloped with the exception of a small pond and pole building at the north end adjacent to the site.

Warnecke residential housing subdivision is located west of the site between the P.A.T. LLC parcel and just east of Woodland Avenue. This subdivision has been platted for development for several years, but to date no roadways or homes have been constructed. Other commercial and residential construction is occurring west of Woodland Avenue.

The northern and eastern sides of the dump are bordered by a manmade perimeter drainage ditch and agricultural land. The Clyde WWTP is immediately south of the site. A high pressure natural gas line transects the property just north of the Clyde WWTP lagoons and adjacent to the southern fill limits. Columbia Gas Transmission has an easement for the high pressure gas line, which has been in existence since the early 1900s. The original pipeline was abandoned in place and replaced with a larger diameter line in the middle 1900s. There is no known sample data available from this time period for the gas line easement. According to Clyde officials, some waste material was historically placed over top of this easement, but was later relocated to the north of the fill area as part of the 2005 site improvement project. This information further suggests that the pipeline was installed prior to the beginning of disposal operations. Specific details pertaining to the current pipeline can be obtained by contacting Columbia Gas Transmission directly.

The agricultural field adjacent to the east side of the site was recently purchased by Clyde. Plans are underway to construct a solar energy farm and anticipated improvements to the WWTP on this property in the near future. According to city officials, WWTP improvements will limit discharges from the last remaining combined sewer overflow located at the head of the plant, by constructing a large first-catch holding basin. City officials also indicated that this basin might be utilized for leachate storage and subsequent treatment in conjunction with other leachate collection system improvements that may be needed in the future.

Although the site is not secured by a perimeter fence, access by trespassers and vehicles is quite limited by Raccoon Creek to the west, the perimeter ditch and agricultural land to the north and east, and a gate to the south. No signage was observed at the site to indicate the presence of a dump or to warn of potential health threats.

The fill area is fairly well vegetated with the exception of the ongoing hard fill/spoils disposal operation at the northern fill area limits. The spoils disposal is being conducted by the city to fill in a low area previously used to borrow soils from for site improvements along Raccoon Creek in the late 1970s. Completion of spoils filling in this area of the site will promote positive storm water drainage and help to minimize leachate generation. Hard fill and spoils are being obtained by local city construction projects. This area is being covered and seeded when appropriate grade is achieved.

The dump's highest point is located at the southern fill limits and slopes gradually from there to the north (See Figure 3: Site Topographic map). The perimeter toe-of-slope along Raccoon Creek is steep, ranging from 1:1 and 2:1 in most areas. Rip-rap stone is placed in a few areas along Raccoon Creek to control erosion. Toe-of-slopes along the south, east, and north sides are generally less steep. The southern-central fill area and south-eastern toe-of-slope was recently re-graded and additional cover soils and seed added to promote positive drainage and address erosion areas and leachate seeps. Cover soils across the site range in thickness from 4 to 8 feet based on borings

conducted during this SRA. Assuming a waste thickness of 12 feet across the entire fill area, a maximum waste volume estimate of 193,600 yd^3 is derived. The actual waste volume is expected to be much less than this figure based on information obtained from boring logs.

There are no on-site groundwater monitoring wells; however, there is reportedly a hand dug well or spring exhibiting artesian conditions at the junk yard approximately 650 feet west of the fill area. The status of this well/spring was not verified during this assessment. Should artesian conditions exist at this well/spring location, they are suspected to be more associated with a shallow saturated ground water bearing unit rather than the confined bedrock aquifer.

Whirlpool Corporation is located upstream of the site, but is no longer discharging process waters directly into Raccoon Creek. Process waters have been discharged to the city sanitary sewer system since 1989. Storm water is still discharged through permitted outfalls into Raccoon Creek upstream of the site. Numerous foam ear plugs were seen in the creek and are suspected to be from Whirlpool's storm water outfalls.

The Clyde WWTP is a major contributor to the flow in the stream averaging 1.7 million gallons per day, of which 96,000 gallons per day is treated from the village of Green Springs. The average annual flow of Raccoon Creek in the area of the site is 5 ft^3/sec, half of which is provided by the WWTP. The stream bed of Raccoon Creek is primarily sand and gravel overlying hardpan clay.

Several leachate outbreaks were observed along Raccoon Creek during the site walk and at the time of sampling. These outbreaks had minimal flow, and were primarily located in previously repaired areas of historic leachate outbreaks and erosion. Large rip-rap stone has been placed in these areas to control erosion due to a lack of adequate vegetation.

Raccoon Creek contains primarily fine and coarse grain sands with very little finer grained (silt & clay) sediment. Disturbance of sandy sediments generated a light discontinuous oily sheen. At the time of the reconnaissance visit, a very light oily sheen was present on the water surface. This sheen was suspected to be related to the WWTP discharge and urban runoff from the Clyde area. A couple tiles were noted entering the creek from the west bank. These tiles are discharging storm waters from properties to the west, including the junk yard and commercial businesses along Woodland Avenue. Automobile parts (tires, plastic and steel parts) were noted throughout the creek bed, mostly just downstream of the site.

Several drums have historically been documented in both Raccoon Creek and the site's perimeter drainage ditch, but have since been removed by the city of Clyde. These drums contained dried paint sludge bottoms and are suspected to be wastes from the former Clyde Paint & Supply Company. The Clyde Paint & Supply Company site is located adjacent to Raccoon Creek just upstream of the Whirlpool plant. The drums previously noted in Raccoon Creek that are discussed in this paragraph resulted from historical disposal operations at the dump site. Impacts to Raccoon Creek from Clyde Paint & Supply Company site are currently unknown.

Photographs were taken during the site walk and sampling event and are contained in Appendix C. Figure 5 contains a map depicting the locations of where photographs were taken.

3.2 Site History

The dump site has been owned by the city of Clyde during its existence. Open dumping operations are known to have existed since the 1930s based on interviews and review of historical aerial photos. Operations were contracted on at least one occasion to Mr. George Snyder and Mr. Larry Fultz, joint partners in a private trash hauling business. Mr. Snyder's half of the trash hauling operation was purchased in 1968 by Mr. Fultz. Mr. Fultz denies ever managing the site for the city of Clyde. According to Ohio EPA files, Mr. Fultz burned Whirlpool Corporation's "rubbish" at the Clyde Dump for a monthly fee of $300.00. Both Mr. Snyder and Mr. Fultz were police officers for the city of Clyde, but the dump operations were not part of their police responsibilities.

Based on documents in Ohio EPA files, the Clyde Dump accepted for disposal a wide variety of wastes from municipal, commercial, and industrial sources. The Whirlpool Corporation and its predecessor companies along with the Clyde Paint & Supply Company were the primary industrial waste generators that utilized the Clyde Dump for disposal purposes.

Clyde Paint & Supply Company was a relatively small paint recycling operation that did not directly discharge to Raccoon Creek. It has been closed since 1985. This site received a certification of closure for a hazardous waste storage area in 1990. The following wastes were known to be stored at this facility: K054, D002, D001, D007, and D008. Additional information pertaining to this facility's operations is available in Ohio EPA files.

City officials have indicated that no manifests or other disposal records are available for the site; however, specific wastes from Whirlpool are discussed in Section 3.3. Wastes deposited at the site included appliances, drummed paint, bulk enamel sludge, auto parts, waste oils, solvents, and asphaltic concrete. The majority of the industrial wastes were deposited in the south central portion of the fill area. The operators noted that waste oil and other liquid wastes would be emptied from drums onsite and the drums crushed. Flammable waste materials were frequently burned for volume reduction and to control odor and vectors.

According to Mr. Snyder, dumping operations prior to 1964 occurred on the ground surface in a swale area that sloped toward Raccoon Creek just north of the Clyde WWTP. From 1964 through 1968, Mr. Snyder excavated 10 foot deep trenches with a bulldozer. Trenches were primarily oriented north to south. Liquid sludge, oil, and paint and enamel wastes were deposited in both bulk and containerized form into the fill area. No liners were constructed in the below grade fill areas of the Clyde Dump. Mr. Snyder reported excavating into saturated sand at depths of 8 to 10 feet across the site.

The site ceased operations in late 1969 after receiving written notification from the local health department to "cover and abandon" the dumping operation. This directive was issued due to the implementation of the first solid waste law in the State of Ohio, promulgated in 1968. Although the city formally ceased operations at this time, they still occasionally placed soil, demolition debris, hard fill, and yard wastes at the site for the next three decades. This indiscriminate dumping and poor cover at the site resulted in numerous environmental problems arising in the early to middle 1970s. Plans were developed in 1971 to convert the dump into a community park, but were never implemented. These plans are available for review at the city administration building.

In 1977, J. A. Schultz & Son (construction contractor) and Floyd Browne Associates (engineering consultant) were hired by the city of Clyde to conduct remedial activities at the dump site in response

to requests from Ohio EPA and the Sandusky County Health Department. A large borrow area was excavated six feet below natural grade in the northern unfilled portion of the property to obtain clay soils for the project and to create a disposal area for waste relocation. Waste was removed along Raccoon Creek and deposited into the borrow area excavation. A portion of the borrow area was left unfilled at the northeast corner of the site upon completion of the project and it eventually filled with rain water. A perimeter drainage ditch was constructed during this project along the east and north fill boundary to prevent off-site discharges to neighboring properties. This ditch discharges into Raccoon Creek at the northwest corner of the property. Portions of the east perimeter ditch were located very close to the waste near the southern central limits of fill. Plan drawings of this work effort are available in Ohio EPA files. There is no documentation in the files pertaining to a project completion report.

Also during the late 1970s, the city of Clyde settled a lawsuit for alleged property damage to 3.5 acres of farm ground adjacent to the north property line of the fill area. Runoff from the landfill was alleged to have contaminated the soil leaving it useless for agricultural purposes. Part of that settlement may have included transfer of the impacted property to the city of Clyde, which was then used for soil borrow and waste disposal purposes mentioned in the preceding paragraphs.

Whirlpool constructed a distribution center adjacent to their manufacturing facility in Clyde in the early 1990s. Considerable quantities of soil material from the construction project were placed on the fill area of Clyde Dump to enhance the existing cover material. Some of this soil may have been impacted by contaminants from historical manufacturing operations on the property.

According to Ohio EPA file correspondence from 1978 until 2003, the 1977 remedial work was not completely successful at controlling leachate discharges from the site. Limited dumping continued to occur by the city of Clyde during this time period. Dumping activity occurred primarily in the northern part of the site in the former borrow area that was partially filled with the 1977 relocated waste debris. Materials that were dumped included yard wastes lime sludge, and construction and demolition debris. As indicated previously, the city of Clyde still disposes of hard fill and spoils from local construction projects in the former borrow area.

The Clyde Dump site is regulated locally by the Sandusky County Health Department through an approved solid waste program administered by Ohio EPA. Annual inspections and documentation of site conditions only occurs at facilities closed within the last 30 years. Since Clyde Dump ceased dumping operations more than 30 year ago, regulatory oversight is done on a complaint basis. Currently, the site has not formally entered into Ohio EPA's Voluntary Action Program. However, more recent site improvements have been conducted voluntarily by the city through an authorization approved by Ohio EPA. Details of this authorization are discussed in the next section. Ohio EPA has recommended in the past that the city of Clyde develop a schedule for, conduct, and document routine inspections and maintenance of the site.

3.3 Previous Site Work

Ohio EPA completed a preliminary assessment (PA) for the site in 1987. The PA recommended the site for additional investigation activities based on historical records and persistent leachate discharges to Raccoon Creek.

U.S. EPA's field investigation team contractor, Ecology & Environment (E&E), completed a screening site inspection (SSI) in 1990. The SSI report recommended additional investigation activities due to concerns of potential ground water contamination and surface water contamination from Polycyclic Aromatic Hydrocarbon (PAH) compounds found in samples collected from Raccoon Creek and in soil samples collected from the fill area.

Ohio EPA completed a focused site inspection prioritization (FSIP) and report dated March 28, 1995. The FSIP provided a review and update of the findings made during the SSI, but did not include any additional sampling. The FSIP report recommended that a site team evaluation prioritization (STEP) be completed to obtain more samples to further evaluate ongoing contaminant releases into the environment.

A CERCLA 104 (e) (2) information request was sent to Whirlpool Corporation. Their response dated September 14, 1995, noted that trash and other debris, industrial wastewater treatment sludge, and inert porcelain slurry were disposed of at the site until early 1970. Contaminants found at the site are indicative of their waste sludge, particularly barium.

Ohio EPA conducted additional sampling activities during the latter part of 1995 through a STEP under cooperative agreement with USEPA. The primary focus of the STEP was to investigate surface water and soil pathways for contaminant migration. Ground water was not evaluated at the site by sampling during the STEP because there are no monitoring wells. However, a residential well was sampled north of the site near the intersection of Woodland Avenue and Bookmeyer Road. Elevated levels of metals were detected in both on-site soil samples and sediment samples collected in Raccoon creek. Lower level organics (primarily BTEX, PAHs, & Pesticides) were also detected in some of the on-site samples, including leachate samples. The STEP report was not issued by Ohio EPA until 1998 due to staffing changes; however, the report did recommended to USEPA the formation of a site assessment team. Ohio EPA also recommended the site for a non-time critical removal action to properly cap the dump and to address ongoing leachate discharges to Raccoon Creek. The site was not selected for a non-time critical removal action.

Beginning in 2002, Ohio EPA conducted sampling at the site in preparation for a state lead enforcement action due to inaction on Ohio's 1998 STEP recommendation. By early 2004, Ohio EPA transmitted a formal recommendation to USEPA requesting a change in the CERCLIS status to "state-lead - other cleanup activity" and during a similar time period, Ohio EPA finalized its enforcement referral package. However, based on the results of the sampling and other enforcement related considerations, Ohio EPA decided to suspend the enforcement case later that year and instead encourage the city of Clyde to make voluntary improvements to the site in lieu of enforcement. Details of the enforcement case including analytical results from waste sampling are contained in a two volume report available for review in Ohio EPA files.

In February 2005, the city of Clyde requested authorization from Ohio EPA to implement voluntary improvements at the dump site to address the degraded site conditions. These improvements were approved by Ohio EPA in March 2005 and included waste relocation, regrading, capping, erosion control measures, leachate outbreak abatement, and seeding. Major work improvements under this authorization were completed by August 2008, and routine maintenance activities have been ongoing since that time. Plan drawings and other details of the 2005 authorization are available in Ohio EPA files. Appendix C contains the authorization request and approval documents. Documentation regarding routine maintenance activities may be available through the city.

In December 2009, Ohio EPA and the local health department responded to a citizen complaint regarding suspected leachate outbreaks along Raccoon Creek. These leachate outbreaks were confirmed upon inspection and were subsequently addressed by the city in July 2010. Additional work was completed on the southeast slope in June 2011 to address erosion and chronic leachate outbreaks.

Based on an inquiry from USEPA regarding CERCLA "other cleanup authority" status of this site, Ohio EPA in December 2010 scheduled a SRA for the 2011 federal grant commitment. In April 2011, Ohio EPA met with the new city manager, Paul Fiser, regarding the planned SRA and ongoing maintenance activities at the site. Discussion occurred regarding recurrent leachate outbreaks into Raccoon Creek. The city agreed to evaluate subsurface geologic data expected to be developed during the SRA and make recommendations for improvements to address long term leachate control. At that time, the city was considering the potential benefit of installing a leachate collection system that will tie into anticipated improvements to the WWTP east of the fill area. The schedule for the improvements to the WWTP is not yet established. Written access for Ohio EPA to conduct the SRA was subsequently received from the city in May, 2011.

3.4 Site Geology, Soils, Topography and Hydrology

The Ohio Department of Natural Resources' (ODNR) Bedrock Contour Map of Sandusky County indicates that the average bedrock elevation in the vicinity of the site is about 580 feet. Information from the United States Geological Survey (USGS) 7.5' Quadrangle Map of Clyde, Ohio indicates that the surface elevation is 650 feet. Therefore, the anticipated depth of bedrock is approximately 70 feet below natural grade. The bedrock surface generally slopes down to the north toward Lake Erie. In Sandusky County there is a buried bedrock valley, which begins in central Seneca County near Tiffin. The axis of the buried valley follows the present day course of Green Creek north through Sandusky County, toward Sandusky Bay. The eastern edge of the buried valley is located about 2.7 miles west of the center of Clyde, and therefore, is not anticipated to be present underneath the Clyde Dump.

The 1961 Glacial Geology Map of Ohio shows the surface deposits (till) were formed by advancing ice sheets during Pleistocene time (10,000 to 2,000,000 years ago). Direct evidence suggests that only deposition from the most recent glacial stage, the Wisconsinan, is present in the Clyde area. The Wisconsinian stage deposits are approximately 14,500 to 19,000 years old. Two types of glacial deposits are present at the surface in Sandusky County; Lacustrine Deposits and Ground Moraine Deposits.

Sandusky County was also covered by the Lake Warren stage, of a glacial meltwater lake which existed before present day Lake Erie. The Lacustrine Deposits form a triangular shaped wedge which covers most of the surface in the north central and northeastern portions of the County. The Lacustrine Deposits are characterized by fine grained sediments, primarily silts and clays, which are commonly laminated. The Ground Moraine Deposits are characterized by an unsorted unstratified mixture of clay (hardpan), silt, sand, and coarser rock fragments deposited discontinuously by ice advancing over bedrock or older glacial deposits. The City of Clyde is located very close to the edge of a northeast to southwest trending fringe of the Lacustrine Deposits, which splits Green Creek Township nearly diagonally. The Clyde Dump site appears to be located in a transitional area between the Lacustrine Deposits and the Ground Moraine deposits.

ODNR's Ground Water Resources Map of Sandusky County, Ohio" (1980) indicates that there are two types of Hydrogeologic units capable of supplying ground water in Green Creek Township. The first area is the sand and gravel lenses contained in the glacial till in a buried bedrock valley. This buried valley has already been discussed in the section regarding the ODNR bedrock contour map, and is over two miles west of the Clyde Dump. The Clyde Dump site is located in an area which the map indicates that the bedrock is the significant aquifer. The aquifer is confined by the overlying clay-rich till, and the actual water table (potentiometric surface) is at or near ground level. For example if a well was drilled to bedrock, the water would flow at the surface without pumping. This area of flowing or artesian wells extends northeast to Castalia, and is responsible for the formation of Millers Spring, Poorman's Spring, and the well-known Castalia Blue Hole.

ODNR's Ground Water Pollution Potential of Sandusky County, Ohio, Report No. 19 (1991) has some information on glacial and bedrock geology. The bedrock aquifer is described as the Silurian Age Salina Group, a thin to massive bedded dolomite (calcium-magnesium carbonate) with argillaceous to shaly layers, vuggy porosity, and zones of gypsum or anhydrite (calcium sulfate). The term "vuggy porosity", indicates that the rock contains voids (Vugs) ranging in size from 0.5 inches to 10 feet in diameter. Vugs are often lined with different kinds of crystalline minerals. Two additional effects of the gypsum mineralization are noted in the vicinity of the site. The presence of calcium sulfate creates a high dissolved solids content, and naturally occurring sulfate reducing bacteria react with the gypsum to form hydrogen sulfide, which diminishes the aesthetic quality of the ground water.

Most of the upper surface of the bedrock is fractured. Some of the fractures were formed due to subaerial exposure of the bedrock after its oceanic deposition and the subsequent retreat of the shallow seas from which it was deposited. Other probable causes of this fracturing include the mechanical action of the glacial ice, isostatic adjustment from the weight of the glacier being removed, and the regional joint pattern. Solutioning of the gypsum which is present in horizontal strata along bedding planes is another mechanism which has opened fractures in the bedrock. Much of the porosity of the Salina Group appears to be due to fractures and solution voids. According to the above referenced publication, yields of up to 1000 gallons per minute are possible in the area east of the Sandusky River, including Clyde.

Paragraph three of page 23 of the above referenced publication is quoted herein in regard to the usability of the glacial till as an aquifer:

"The tills of Sandusky County <u>do not</u> constitute a regional aquifer. Lenses of sand and gravel within or between till units comprise a limited local aquifer suitable only for domestic use. Wells developed for this use are predominately found between Green Springs and Clyde. Yields are typically under ten gallons per minute."

The 1994 FSIP report identified eight residential wells located within an approximate 4500 foot radius of the site. Wells 1, 5, and 7 are located within an approximate 2500 foot radius of the site, and provide the best available site specific information which is examined in detail as follows:

<u>Well Log #1</u>

This log indicates that clay is present from ground surface to a depth of 63 feet. Gravel is present from 63 to 67 feet below ground surface, where limestone bedrock was encountered. Although the log does not describe the gravel, it is likely to be fractured and weathered bedrock. Because the

bedrock at this well location is covered by over 60 feet of relatively impermeable clay, the bedrock aquifer is the only significant source of ground water.

Well Log #5

This well is located approximately 500 feet due south of Well #1, and is the closest well to the site, approximately 2000 feet northwest of the northwest corner of the site. The log indicates that topsoil is present in the 0 to 20 foot interval below ground surface. Beneath the topsoil is a 15 foot thick layer of hardpan encountered in the 20 to 35 foot depth interval below ground surface.

The Glacial Geology Map of Ohio, has described "Hardpan" as a smooth surfaced deposit of till composed of unsorted and unstratified mixture of clay, silt, sand and coarser fragments deposited discontinuously by ice advancing over smoothed bedrock and older glacial deposits. Glaze (1972) takes the definition of "hardpan" further by describing it as a hard tightly cemented layer of ferruginous and calcareous material often found at the base of the till especially where it overlies sand and gravel. Literature also describes hardpan as a hard pebbly till of early Wisconsinian Age commonly located just above bedrock or on top of sand and gravel deposits which overlie bedrock in northwestern Ohio. From a geotechnical basis, "Hardpan" has blow counts ranging from 50/6" to 50/1" as observed in the field during the ASTM Standard D420 "Practice for Investigating and Sampling Soil and Rock for Engineering Purposes."

This log indicates that a sand and gravel deposit underlies the hardpan and is present to a depth of 55 feet below ground surface. From 55 to 60 feet below ground surface gravel is present, and bedrock was encountered at a depth of 60 feet below ground surface. The sand and gravel from 35 to 60 feet are likely to be hydraulically connected to the bedrock, and can be considered the same aquifer. As is the case with Well #1, the hardpan clay is also an upper confining layer.

Well Log #7

This well is located approximately 2500 feet to the east of the northeast corner of the site. The glacial sands and gravels encountered at Well #5 are absent at this location. The geology of Well #7 is very similar to Well #1 and consists of clay and hardpan to a depth of 43 feet where bedrock was encountered.

Some generalizations about the local hydrogeology within 2500 feet of the Clyde Dump site can be made from these three well logs. First, the bedrock aquifer is confined by the overlying clay and there is an upward component to the flow regime. This assumption is borne out by a review of the static water level data supplied in the well logs. The static water level was 3 feet at Well #1, where bedrock was encountered at a depth of 67 feet, artesian (flowing) conditions were found at Well #5, and the static water level at Well #7 was 1 foot.

The second observation is that if the information in Well Log #7 is correct, there is an apparent upward rise in the bedrock surface to the east of the site. This would indicate that there may be a northwest trending flow component underneath the site.

The third general observation is that the glacial sands and gravels present at Well #5 are not found at the other two well locations within a 2500 foot radius of the site. The glacial sands and gravels

present at Well #5 may represent an isolated lens shaped deposit, which is not uncommon in glacial geology.

The E&E SSI report contains a number of water well logs from an approximate three mile radius of the site. The last paragraph of page 5-2 of the E&E report is quoted herein:

"Most area wells draw from the Monroe Limestone aquifer. However, a few wells draw water from the glacial material (see Appendix E for well logs of the area of the site). It appears that although clay lenses ranging in thickness from 1 to 63 feet do exist in this area, the clay lenses are not continuous within a 3 mile radius of the site (see Appendix E). Therefore the bedrock aquifer and the glacial aquifer are hydraulically connected and constitute the Aquifer of Concern (AOC). Based on well logs of the area, depth to the AOC may be as shallow as 12 feet."

The E&E SSI report has made a very broad generalization in assuming that the bedrock aquifer and the glacial aquifer are hydraulically connected within a three mile radius of the Clyde Dump site. The information from the ODNR publications "Ground Water Resources Map of Sandusky County" and the "Ground Water Resources Map of Sandusky County, Ohio" do not support this conclusion. The usage of the term "clay lenses" in the preceding paragraph implies that the glacial till does not confine the bedrock aquifer, when in actuality based on all of the available information; the bedrock aquifer is confined by the glacial till in the vicinity of the site.

The isolated sand and gravel units disseminated in the glacial till do not comprise a significant local aquifer which is hydraulically connected to the bedrock. While it is possible to obtain groundwater from the sand and gravel lenses, these deposits are isolated and not expected to be laterally continuous in the area of Clyde Dump. The bedrock aquifer in the vicinity of the Clyde Dump is likely to be confined by the overlying glacial till. While there is a sand and gravel lens present in the vicinity of well log #5, the sand and gravel is still separated from the ground surface by 35 feet of hardpan and topsoil. Reportedly, there is a flowing hand dug well/spring present at the former junkyard on the opposite side of Raccoon Creek immediately to the west of the Clyde Dump. It is also likely that artesian (flowing well) conditions would be present at the Clyde Dump site if a well were to be constructed into the regional bedrock aquifer.

Site specific geologic and hydrologic information was gathered during the SRA sample event. A full report is contained in Appendix D and is discussed in general terms in section 4.1 below.

3.5 Local History and Demographic Information

The city of Clyde is located in northwest Ohio on land that historically contained a forested area on the eastern edge of the Great Black Swamp. It was first settled in the early 1820s. It was named after Clyde, New York and is known for pioneering ventures during the automobile revolution in the early 1900s. The Elmore Car manufacturing facility was located on Amanda Street, which is now the current site of Whirlpool Corporation.

According to the United States Census Bureau, the city has a total area of 4.4 square miles containing mostly land and very little water. As of the 2000 census, there were 6,064 people, 2,304 households, and 1,633 families residing in the city. The population density was 1,381.5 people per square mile. The median income for a household in the city was $39,764, and the median income for a family was $45,646. The per capita income for the city was $17,966. About 6.8% of families and

8.6% of the population were below the poverty line. 4-Mile Radius Maps and Demographic Data tables are contained in Appendix F.

4.0 SAMPLE LOCATIONS & ANALYTICAL RESULTS

Surface water, sediment, and soil samples, were collected during the SRA. A photographic log of sampling locations can be found in Appendix C. Figure 5 contains a map depicting the locations of photographs. As indicated above, ground water samples were not collected during the SRA because a viable water bearing unit was not present between the bottom of waste and the hardpan clay layer.

Samples were analyzed by USEPA Contract Laboratory Program laboratories. Analyses included the following parameters: Volatile Organic Compounds (VOCs), Semi-Volatile Organic Compounds (SVOCs), pesticides, PCBs, and TAL metals. Complete analytical results of this investigation are contained in Appendix E. Data were reviewed by USEPA, Region V, personnel for compliance with the Contract Laboratory Program, and validated by Region V, Central Regional Laboratory staff.

Significant detection data tables were developed based on USEPA Hazard Ranking System guidance. Background was determined by averaging the concentrations between the two collected background sample parameters for each media sampled. All significant detections are in both bold font and red shaded cells in the data tables. Some elevated contaminant concentrations were compared to USEPA Regional Screening Values (RSVs) for discussion purposes in this section and the pathways section of this report.

Standard Quality Assurance and Quality Control (QA/QC) procedures for Site Investigation (SI) field activities were followed during the investigation. These procedures, including sample collection, packaging and shipping, and equipment decontamination, are documented in the Quality Assurance Project Plan (QAPP) for Region V, Superfund SI Activities for Ohio EPA and Ohio EPA Field Standard Operating Procedures.

4.1 Groundwater

The groundwater pathway was investigated during this SRA utilizing a GeoProbe® 5410 rig. Temporary groundwater monitoring wells were scheduled to be installed in four locations around the perimeter of site, but no saturated units capable of being monitored were found to exist above the hardpan clay. The hardpan clay layer was encountered at pre-fill depths of approximately 8 feet to 11 feet across the site or at approximate elevations of 641 to 634 ft from mean sea level (MSL). The hardpan clay encountered during boring installation quickly stopped tool advancement (refusal conditions), thereby preventing additional subsurface investigation. As a result, no ground water samples were able to be collected during the SRA. The locations of these planned wells are shown in Figure 4-2 and labeled GP-1 through GP-4. Two of these borings (GP-3 & GP-4) were utilized for characterization of local background soil conditions. Although borings GP-5 through GP-8 were advanced within the fill area (fill borings) primarily to obtain soil and leachate samples at the waste-till interface, geologic stratigraphy and hydrogeologic information was also recorded during continuous coring. The maximum depth of fill borings targeted the waste/till interface to minimize the potential of creating a vertical preferential pathway for contaminant migration beneath the limits of fill.

A shallow partially saturated sand unit (SW, SM, SC & SP soil classifications) was observed at the ground surface at boring locations GP-2 and GP-4 and extends to depths of 4 and 6 feet below ground surface, respectively. These two borings are located outside the limits of fill; GP-2 being at the southeast corner of the site and GP-4 being at the northwest corner of the site at Raccoon Creek. Similar sand units were seen at corresponding elevations in fill borings GP-5 through GP-8, indicating the unit may have been or remains continuous across the central and southern portions of the fill area (See Figure 6 for geologic cross section maps). This unit is saturated in the bottom 1 foot at boring GP-2, saturation expands to 8 feet or more in thickness across the bottom of the unit within the fill area, and then reduces back to 2 feet in saturated thickness at the bottom of the unit at boring GP-4. Based on information obtained from the fill borings, this partially saturated unit is in direct contact with waste materials. The base elevations of the unit slope toward Raccoon Creek similar to the hardpan layer, indicating that horizontal flow in the unit is to the west-northwest. Raccoon Creek is the likely discharge point of perched water and/or leachate impacted ground water from this unit as vertical movement is limited by lean clays and the hardpan layer below it. The above conditions are suspected to be causing leachate outbreaks at the dump site along Raccoon Creek.

In the vicinity of GP-2 at the southwest corner of the site, this saturated unit is commonly discharging clear ground water to the ground surface during wet conditions. Disturbance of the upper till in this area from the natural gas pipeline installation and filling operations at the dump has likely created a pathway to the ground surface. The lateral extent of this unit to the east of the site is unknown, but is suspected to be a source of incoming ground water that contributes to the generation of leachate within the fill area. The shallow perimeter leachate collection tile in this area is suspected to be influenced by water in this unit based on a comparison of elevation data collected during the SRA. A complete report containing information pertaining to the site specific geology and hydrogeology, including boring logs and a geologic cross section map of the fill area, can be found in Appendix D.

Due to the presence of an apparent continuous hardpan clay layer located beneath a relatively shallow saturated sand unit that discharges to nearby Raccoon Creek, there is no reason to suspect that the regional bedrock aquifer is being impacted by contaminants leaching from the dump. Also, ODNR literature suggests that any limited domestic use of intermittent glacial till aquifers in Sandusky County is occurring several miles south of the site from the city of Clyde toward the village of Green Springs.

4.2 Surface Water

Surface water samples were obtained from seven locations along Raccoon Creek, beginning downstream of the site and ending upstream of Whirlpool Corporation. See Figure 4-1 for sample locations. Samples collected in the creek adjacent to the site (Samples SW-3, SW-6, and SW-8) were from areas of historic intermittent leachate outbreaks. Additionally, two leachate samples were collected; one from within waste borehole GP-7 (Sample L-10) and the other from a sump (Sample L-9) located in the northeast corner of the site that is connected to a perimeter leachate collection tile. Two background water samples (SW-1 and SW-7) were collected upstream of the WWTP.

Sample SW-6 is mostly representative of the WWTP effluent and was collected just downstream of the mixing zone. Due to low flow conditions in Raccoon Creek upstream of the WWTP at the time of sampling, surface water samples SW-8, SW-3, SW-2, and SW-4 are also mostly representative of WWTP effluent. Sample SW-3 was collected in the mixing zone area just downstream of where the

perimeter drainage ditch enters Raccoon Creek. There was no flow in the perimeter ditch at the time of sampling.

Inorganic sample results indicate the presence of elevated metals in leachate, with the highest concentrations occurring in sample L-10 taken directly from waste boring GP-7. Elevated metals were also observed in leachate sample L-9 taken from the leachate collection system sump; although, the concentrations were significantly less than sample L-10. This indicates that the movement of heavy metals contained in leachate is being limited by the waste itself, native soil, and clay cover soils. The intermittent nature and low flow of leachate within leachate outbreak areas is also suspected to be limiting the movement of heavy metals to the surface water pathway.

Significant detections of contaminants from all water samples are listed in data table 1. There were no significant organics detected in the water samples, but there were some significant inorganic metal detections primarily in the two leachate samples and to a lesser extent in sample SW-6.

While elevated detections of numerous metals were noted in leachate samples, concentrations of these same metals within the waters of Raccoon Creek were either greatly diminished or not detected. The significant detections of metals in surface water are more likely attributed to the effluent from the Clyde WWTP and/or other upstream sources rather than leachate discharges from the site.

4.3 Sediment

Sediment samples were obtained from seven locations along Raccoon Creek in the same general area as the surface water samples. Samples collected adjacent to the site (SE-3, SE-6, and SE-8) were biased toward the east stream bank in areas of historic intermittent leachate outbreaks. See Figure 4-1 for sample locations. Very little fine grain sediment exists in Raccoon Creek within the study area due to the lack of stream meanders and high flow rates from local urbanization. These conditions cause scouring of the creek bed which moves sediment far distances downstream during storm events. The creek bed in the assessment area consists mainly of course grain sand, gravel, and rocks overlying hardpan clay. Sediment samples were collected from areas in the creek containing features that tend to accumulate finer grain particles, such as behind log jams and large rocks. Sediment collected during this assessment is expected to be indicative of more recent deposition due to current stream conditions. Significant detections of contaminants from all sediment samples are listed in data table 2.

Inorganics detected at significant levels both adjacent to the site and downstream of the site include the metals Cobalt and Potassium. Cobalt is the only metal that may be attributed to the site based on the analysis of leachate and onsite soils. The highest Cobalt concentration in sediment occurred in sample SE-3 at 15.4 mg/Kg, well below the non-cancer residential RSV of 23 mg/Kg.

Organic sample results from sediment indicate the presence of contaminants at very low levels for certain volatile, semi-volatile, and pesticide parameters. Many of these contaminants were also observed in the background sediment samples at higher concentrations than samples taken at the site and downstream of the site. There were no PCB contaminants detected in any of the samples.

Volatile contaminants mostly associated with petroleum fuels (gasoline) were observed in most release (non-background) samples at estimated concentrations. Ethylbenzene and Xylenes were

observed in all release samples (with the exception of SE-6) at maximum estimated concentrations of 0.87ug/Kg and 1.9 ug/Kg respectively. 1,4-Dichlorobenzene was detected in all release samples with a maximum concentration occurring in sample SE-3 of 0.95 ug/Kg. Toluene and 2-Butanone were the only significant volatile detections occurring in sample SE-3 at 200 ug/Kg and 24 ug/Kg respectively. 2-Butanone was observed in the background sample just upstream of the site at an estimated concentration of 8.1 ug/Kg. Both Toluene and 2-Butanone concentrations are well below residential RSVs.

Semi-volatile compounds Acetophenone and 4-Methylphenol were observed in most sediment release samples at estimated maximum concentrations of 12 ug/Kg and 160 ug/Kg respectively. Numerous other semi-volatile compounds (mostly PAHs) were observed in sediment release samples, but cannot be attributed to Clyde Dump because they are present in upstream background samples at similar or higher concentrations. PAHs in Raccoon Creek sediment are predominantly anthropogenic in nature and can be attributed to local urban runoff from the Clyde area. None of these detections are considered significant and most are below the residential RSVs.

Pesticides were observed in 3 of the 5 sediment release samples. Beta-BHC was detected at an estimated concentration of 0.5 ug/Kg in release sample SE-3 only. Dieldrin was observed in samples SE-3, SE-4, and SE-6 with a maximum concentration occurring in SE-3 at 3.7 ug/Kg. Delta-BHC and Heptachlor epoxide were only observed in sample SE-6 with an estimated concentration of 0.68 ug/Kg and 0.8 ug/Kg respectively. 4,4'-DDE was the only pesticide detected at significant concentrations in release samples SE-3 and SE-6, with the maximum estimated concentration of 8.1 ug/Kg occurring in sample SE-3. 4,4'-DDE was the only pesticide that was also detected in both upstream background samples at estimated concentrations of less than 2.0 ug/Kg.

Although many organic contaminants were observed in release sediment samples, most were at estimated concentrations and were also found in upstream background samples. Clyde is known historically as a hub for numerous railways that in addition to having crossings over Raccoon Creek, also contribute storm water drainage from their right-of-ways. Contaminants found in background samples are likely attributed to railways in town and other non-point sources. 4, 4' DDE and Toluene can be considered partially attributable to the site. However, the concentrations for these contaminants are well below the residential RSVs.

4.4 Soil

Soil samples were obtained from the surface and subsurface both within and outside of the fill area during this investigation. See Figure 4-2 for boring locations. Subsurface samples were collected at the base of fill near the waste/soil interface using direct push technology equipment. Exact depth intervals for subsurface sample collection are contained in the boring logs located in Appendix D. Surface samples were collected within the upper six inches of soil just below the root zone using hand shovels and spoons. Surface samples taken from fill areas were collected in the same general locations as the subsurface boring locations.

Two background locations (GP-3 & GP-4) were selected outside of the fill area where ground water wells were previously planned to be installed. Both surface and subsurface soil samples were collected from GP-3 & GP-4 for comparison purposes to samples collected from within the fill area. Inorganic sample results indicate the presence of heavier metals in both the surface and subsurface

soils at these background locations. Significant detections of contaminants from all soil samples are listed in data tables 3 & 4.

Elevated metals concentrations above background in the surface soil occur primarily at boring location GP-5, which is within the fill area. This area was void of vegetation at the time of sampling and the depth of cover soil is 8 feet. This cover soil is likely excess material from the expansion project at Whirlpool Corporation discussed in section 3.2. The analytical result for Lead in GP-5 surface soil (SO-5) is 188 mg/Kg, well below the residential RSV of 400 mg/Kg. However, its duplicate sample (SO-12) concentration is significantly higher at 708 mg/Kg. It should be noted that both results are reported as estimated due to laboratory QA/QC issues and this is the only parameter in the duplicate sample that does not correlate well with the original sample. The duplicate sample concentration for SO-12, although suspect for elevated Lead contamination, is below the industrial RSV of 800 mg/Kg. Cobalt is the only detected metal that exceeds the non-cancer residential RSV in surface soil at boring location GP-5, but is below the industrial RSV of 300 mg/Kg. All other significant metals detections in GP-5 surface soils and the other surface samples from borings GP-6 through GP-8 within the fill area are below residential RSVs.

Elevated levels above background of similar metals occurred in the subsurface primarily at boring locations GP-5 (Sample SO-4) and GP-6 (SO-6). Lead was the only metal that slightly exceeded the residential RSV in these two samples with an estimated maximum concentration of 646 mg/Kg occurring in sample SO-4. Lead was detected in all other subsurface samples well below the residential RSV.

Organic sample results indicate low levels of VOCs, SVOCs, Pesticides, and PCBs in most of the surface and subsurface samples taken within the fill area. BTEX, TCE, Acetone, Isopropylbenzene, and 2-Butanone are VOCs that were found intermittently in the subsurface waste samples. While these are considered significant based on the absence of these parameters in background samples, they are all well below residential RSVs and represent worst case conditions within the dump.

PAHs are SVOCs that were found in predominantly all surface samples at low estimated concentrations. PAHs were also mostly observed in the subsurface at boring GP-5 (sample SO-4) at higher concentrations above both residential and industrial RSVs. Again, these concentrations are considered significant based on the absence of these parameters in background samples, but they represent worst case conditions within the dump.

Pesticides were commonly detected at estimated significant concentrations above background in both the surface and subsurface soils. Dieldrin is the only pesticide that exceeded the residential RSV of 30 ug/Kg in all surface soils with a maximum estimated concentration of 170 ug/Kg occurring in the duplicate (SO-12) of surface sample SO-5. Sample SO-5 and its duplicate also exceeded the industrial RSV of 100 ug/Kg. Sample SO-5 was collected from boring location GP-5. Dieldrin is a bioaccumulator and is classified as a suspected human carcinogen according to USEPA, but is not classified as a carcinogen by ATSDR. Dieldrin is widespread and persistent in the environment and bonds tightly to soil particles. Exposure to Dieldrin in the environment usually occurs through incidental ingestion and can affect the nervous system at lower concentrations over repeated exposures.

Two PCBs (Aroclor 1254 and Aroclor 1260) were detected at significant concentrations above background and the residential RSV of 220 ug/Kg in surface sample SO-5 with maximum

concentrations of 4400 ug/Kg and 350 ug/Kg respectively. Aroclor 1254 also exceeded the industrial RSV of 740 ug/Kg in surface sample SO-5. Aroclor 1254 exceeded both the residential and industrial RSV in subsurface samples SO-4 and SO-8. Surface sample SO-5 and subsurface sample SO-4 were taken from boring location GP-5 within the fill area. Subsurface sample SO-8 was collected from boring location GP-7 within the fill area. These PCB congeners are also widespread and persistent in the environment and they bond tightly to soil particles. PCB congeners are also bioaccumulators and are classified as carcinogens by USEPA and probable human carcinogens by ATSDR. Exposure to PCBs can cause multiple health affects in humans.

The thickness of cover soils at the boring locations ranged from 4 feet at GP-7 to 8 feet at GP-5. Thickness of wastes ranged from as little as 1.5 feet at GP-6 to 12 feet at GP-7. Limited waste thickness observations in some of the boring locations could be from trench walls and other anomalies common to the area-fill disposal method.

4.5 Air

Air samples were not collected during the SRA.

5.0 MIGRATION AND EXPOSURE PATHWAYS

5.1 Ground Water

Residents near the site within the Clyde corporation limits utilize local public water that is obtained by a surface water reservoir system located south of the city. The city of Clyde operates this community public water system and serves a population of approximately 7,330 people, including water sold to the village of Green Springs to the south. The city of Clyde draws water from a surface water intake on Beaver Creek and pumps into the Beaver Creek above ground reservoir. Water is then gravity-fed from the Beaver Creek Reservoir to the Raccoon Creek Reservoir and then to the water treatment plant. The system's treatment capacity is approximately 2.4 million gallons per day, but current average production is 1.2 million gallons per day. The city of Clyde's water treatment system consists of coagulation, lime softening, sedimentation, filtration, adsorption, stabilization, fluoridation and disinfection.

The rural community commonly uses cisterns, hauled water, or a rural public water system due to the poor quality (taste & odors from the presence of hydrogen sulfide) of drinking water available from the regional aquifer. Although domestic use of water for potable purposes may be occurring from intermittent glacial till sources several miles south of the site, this practice is limited due to inadequate water flow and volume. Northern Ohio Rural Water (NORW) is the rural public water system in the area. The finished water supply for this system is provided under a cooperative agreement with the Erie County Sanitary District, which draws raw water from Lake Erie. It serves select areas within Green Creek, York, Sandusky and Riley Townships.

Due to the absence of a transport pathway from the site to the confined regional aquifer or to intermittent saturated till units, contamination of ground water resources is not expected. Shallow ground water beneath and nearby the site which may be impacted by site contaminants is suspected to be discharging into Raccoon Creek. Because most nearby residents utilize publicly available water

sources or the regional aquifer, the ground water pathway is not expected to substantially contribute to the site score due to the limited number of targets.

5.2 Surface Water

Extensive studies of Raccoon Creek in the vicinity of the site have occurred by Ohio EPA over the years due to major upstream impairment sources. The most recent study of Raccoon Creek occurred in 2009 by Ohio EPA. The findings of the study are contained in a report entitled Biological & Water Quality Study of Sandusky Bay Tributaries, 2010, and can be found on Ohio EPA's web site at the following address: http://www.epa.ohio.gov/dsw/document_index/psdindx.aspx, References to the findings in Raccoon Creek are made in the following paragraphs. Major historical and ongoing point sources of impairment include Whirlpool Corporation and the Clyde WWTP. Whirlpool previously discharged industrial wastewater directly into Raccoon Creek under a NPDES permit. Whirlpool is now an indirect discharger of industrial wastewater into the city sewer, while storm water continues to be discharged directly into the creek by permit. Clyde Paint & Supply Company is not considered a major upstream impairment source because there were never any permitted direct discharges from the site and the facility has been closed since 1985.

Clyde's current WWTP was constructed in 1986 and was significantly upgraded with treatment improvements in 2006. The plant discharges treated wastewater immediately upstream of the site. The system is designed to treat an average flow of 1.9 MGD and consists of primary and secondary aerobic digesters, a pair of oxidation ditches with clarifier, tertiary lagoons and UV disinfection. Thirty-five (35) percent of the sewage collection system in the city is combined with one CSO discharge to Raccoon Creek located at the head of the plant.

The Clyde WWTP is a significant point source of impairment to Raccoon Creek despite the upgrades to the plant in 2006. Sewage from the single CSO and excessive nutrient discharge from the Clyde WWTP contributes to organic enrichment and eutrophication in Raccoon Creek. Crop production with subsurface drainage was the most common nonpoint source of impairment in Raccoon Creek contributing to increased siltation/sedimentation, nutrient enrichment and channel erosion/incision downstream of the site. Poor biological and fish community conditions are well documented both at the site and several miles downstream of the site. Raccoon Creek is in non-attainment of its warm water habitat (WWH) aquatic life use designation from the Clyde Dump site to the confluence with Sandusky Bay.

Sensitive environments such as wetlands and managed wildlife areas exist in the 3 mile lower reach of Raccoon Creek where it discharges into Sandusky Bay. Most of these areas are owned and actively managed by private conservation clubs and the State of Ohio. Interconnection of the creek with most of these large wetland areas is very limited due to diking of both agricultural lands and managed wetlands to control water levels and flooding. According to Ohio Department of Natural Resources Division of Wildlife, only 170 acres of wetlands within a roughly 2,000 acre wetland complex may be subject to uncontrolled floodwaters within the 3 mile lower reach. Although water from Raccoon Creek is used to fill controlled wetland areas during extended dry periods, the water is most commonly transferred by non-mechanical means during seiche effect conditions. Seiche effect conditions occur during extended periods of strong northeast winds when water is blown from Lake Erie and Sandusky Bay into the lower reach of the creek, causing water levels to rise and stream flows to reverse. During seiche conditions, wooden sluice gates are opened to allow water from Sandusky Bay to flow into the controlled wetland areas naturally. While transfer of water from

Raccoon Creek to managed wetlands occurs at limited times by mechanical means (pumping), these occurrences are not the norm due to the added utility and maintenance costs.

The Raccoon Creek stream segment is approximately 11 miles from Sandusky Bay to Clyde Dump. In the middle to upper reaches toward Clyde Dump, four identified wetland areas exist that may interact with flood waters from the creek. They are located at 2 miles (7acres), 3 miles (9 acres), 4 miles (12 acres), and 6 miles (8 acres) heading downstream of the site. The extent of interaction with flood waters and the quality and type of wetlands at these private locations is unknown.

Raccoon Creek was recently recommended for primary contact recreation (PCR) in 2010. Recreation use attainment status is determined by comparing E. coli sample results. Raccoon Creek is impaired for recreational use due to the presence of pathogens. Sources of bacteria included combined sewer overflows from the Clyde WWTP, livestock access and/or runoff, and failing home sewage systems.

PCBs have been detected in sediment collected from Raccoon Creek near the confluence with Sandusky Bay, with concentrations of total PCBs at 281.5 µg/Kg and individual PCBs at 249 ug/Kg (Aroclor 1254) and 32.5 ug/Kg (Aroclor 1260) respectively. PCB levels at that location are such that probable aquatic impairment effects are occurring. The source of PCB contamination in this area is unknown, but potential sources include Clyde Dump (10 miles upstream) and Waste Management's Vickery Environmental Incorporated (WMVE) site, which is located 4 miles upstream via Little Raccoon Creek and Meyers Ditch. Aroclor 1254 was detected at estimated concentrations below 100 ug/Kg in two sediment samples taken on the WMVE site in 2008; however, no PCBs were detected above the laboratory detection limits in samples taken from Meyers Ditch and Little Raccoon Creek. The WMVE site is currently a deep well injection facility regulated under the Resource Conservation and Recovery Act. The facility is subject to corrective actions and formerly contained waste oil lagoons. Additional information on the WMVE site is available in Ohio EPA files.

The Clyde Dump may have also been a contributing source of PCB contamination based on data from this SRA, and from sediment data published in a 1997 Biological and Water Quality Study Report by Ohio EPA. This report can also be found on Ohio EPA's web site at the following address: http://www.epa.ohio.gov/dsw/document_index/psdindx.aspx. Although PCB congeners were not detected in sediment at or near the site from this SRA, the same congeners were detected in surface soils of the dump. Historic sediment contamination documented near the site in the 1997 report is suspected to have been scoured and then deposited downstream near the confluence with Sandusky Bay, where flow velocities are much lower. As previously indicated, PCBs may be of concern for the aquatic environment. These contaminants are also of concern to human health due to the potential for bioaccumulation up the human food chain. PCBs have been detected in bottom dwelling fish tissue throughout the 11 mile segment downstream of Clyde Dump. While fishing is not expected at or near the Clyde Dump site, it is likely occurring further downstream near Sandusky Bay along with the taking of other human food chain organisms such as frogs and turtles.

Historically, the surface water pathway has had the most potential for impact by the site due to erosion of waste areas and chronic leachate discharges directly into Raccoon Creek. Potential impacts to surface water from site contaminants have been a concern primarily due to fisheries designations and sensitive wetland areas identified downstream of the site. As previously indicated, most of the 2,000 acres of prime wetland habitat located 10 miles downstream are isolated from the creek by active management practices. The remaining five wetland areas identified nearer to the site

are of unknown quality and interaction with the creek, and together total 206 acres. See Figure 7 (maps 1 and 2) for locations of these five wetlands.

The frequency and quantity of leachate discharges and eroded soils/waste from the site into Raccoon Creek has been significantly minimized in recent years due to the implementation of routine maintenance practices by the city of Clyde. Although observed releases of leachate impacted ground water continue to be documented by both direct observation and sample data, the impacts to surface water are minimal at best due to intermittent leachate flows containing mostly low level metals. Severe impacts from sources containing similar pollutants in addition to other pollutant loads both upstream and downstream of the site overshadow possible impacts from the Clyde Dump site.

The contaminant probable point of entry from Clyde Dump is along the bank of Raccoon Creek where shallow impacted ground water is discharging from the toe-of-slope. These discharges are on relatively steep slopes along Raccoon Creek and are not easily accessible to trespassers. Leachate discharges east of the site are currently under control and can be managed by pumping from the leachate collection system manhole. Control of leachate impacted ground water discharges to Raccoon Creek can be addressed through improvements to the current leachate collection system and subsequent treatment at the WWTP.

5.3 Soil

Analysis of surface cover soils at the site indicate that contaminates may have migrated from the buried waste to surface soils in at least one area located near GP-5. However, this situation may also be due to impacted cover soils being brought in from off-site locations. While concentrations near GP-5 for Cobalt exceed the residential RSV, all other metals were below their screening value. PCBs and the pesticide Dieldrin were identified above background and at levels that exceeded both the residential and industrial RSVs. Some VOCs were detected at very low levels in subsurface soils taken at depth from within the fill area. No VOCs were detected in surface soils at significant concentrations. SVOCs, primarily in the form of PAHs were detected in surface and subsurface soils at elevated concentrations. However PAHs are anthropogenic and ubiquitous in the environment as evidenced by similar observations in background samples.

As indicated in Section 3.1 of this report, the Clyde Dump site has very limited access to the general public due to adjoining private property, physical deterrence from Raccoon Creek and the perimeter drainage ditch, and the fence and gate at the WWTP. City personnel conduct routine maintenance activities at the site such as mowing and erosion control. These activities (trespassing & maintenance) could create limited short term exposures to low level contaminants in surface soils.

Currently, the closest residence to the site is located 700 feet to the west along Woodland Avenue. Residents along Woodland Avenue utilize publicly available water. Warnecke subdivision has been platted for several years, but for the most part no roads, utilities, and homes have been constructed to date. The closest undeveloped lot to the site is approximately 220 feet away. Currently there are no administrative controls at the site such as warning signs to notify trespassers or adjacent property owners that health threats may be present on the property.

Ongoing maintenance by the city of Clyde to the cap and vegetative cover will continue to minimize the potential for contaminant exposure to trespassers, workers, and terrestrial animals. It will also minimize the potential for transport of contaminants to the surface water and air pathways by

weathering forces. Cover soil thickness over wastes ranged from 4 feet to 8 feet in the boring locations. Due to the limited number and type of contaminants at or near residential and industrial RSVs in surface soil, the soil pathway is not expected to substantially contribute to the site score.

5.4 Air

The air pathway (ambient air) was not directly evaluated during the SRA through utilization of fixed air monitoring devices. Air monitoring was conducted with a photo-ionization detector within work areas for sample screening and for worker health and safety purposes. No unusual conditions were observed while monitoring work areas. Waste areas at the site are predominantly covered with non-impacted soil and vegetation, which minimize the potential for contaminated airborne particulates to migrate from the site by the air pathway. Subsurface migration of explosive gas or other soil gases to structures is not suspected at this time due to the distances to nearby structures and the nature of the waste. Based on current site conditions, this pathway is not expected to substantially contribute to the site score.

6.0 SUMMARY

The nature and extent of the fill material at the Clyde Dump site has been fairly well delineated through completion of this SRA and previous sampling events. Industrial, commercial, and residential wastes were deposited in the dump at known depths and quantities. Contaminants from past disposal practices are present in leachate and surface soils. These contaminants are migrating to surface water through leachate seeps and to a lesser extent by erosion forces.

Despite the presence of these contaminants, adverse impacts to human health or the environment are suspected to be minimal due to current site conditions and based on the types and concentrations of the contaminants. Presently, any additive impacts to Raccoon Creek that may be occurring from leachate outbreaks cannot be fully determined due to pollutant loads from other sources in the watershed. Based on site specific hydrology and geology, leachate from the site is not expected to be impacting local or regional ground water resources.

PCB congeners noted in the sediment of Raccoon Creek 11 miles downstream near Sandusky Bay could potentially be partially attributable to this dump site and at least one other potential source. However, sediment samples taken during this assessment do not indicate that the Clyde Dump site is an ongoing source of PCB contamination at this time, based on data obtained at and near the site. Although PCB congeners were seen in surface soils primarily near boring location GP-5, they bond tightly to soils and appear to be immobile at this time. PCBs found in cover soils may be attributed to contamination at off-site sources where cover soils originated.

Improvements made to the site since 2005 and the implementation of routine maintenance activities by the city of Clyde has greatly diminished the environmental problems documented during previous site investigations. Placement of additional cover soils from proper sources and the establishment of a dense vegetative cover in a few bare spots would further minimize the likelihood of future exposure to workers and trespassers and contaminant migration to other environmental media. The city of Clyde has indicated a willingness to address persistent intermittent leachate outbreaks through containment system improvements, which would further minimize potential impacts to Raccoon Creek from uncontrolled discharges.

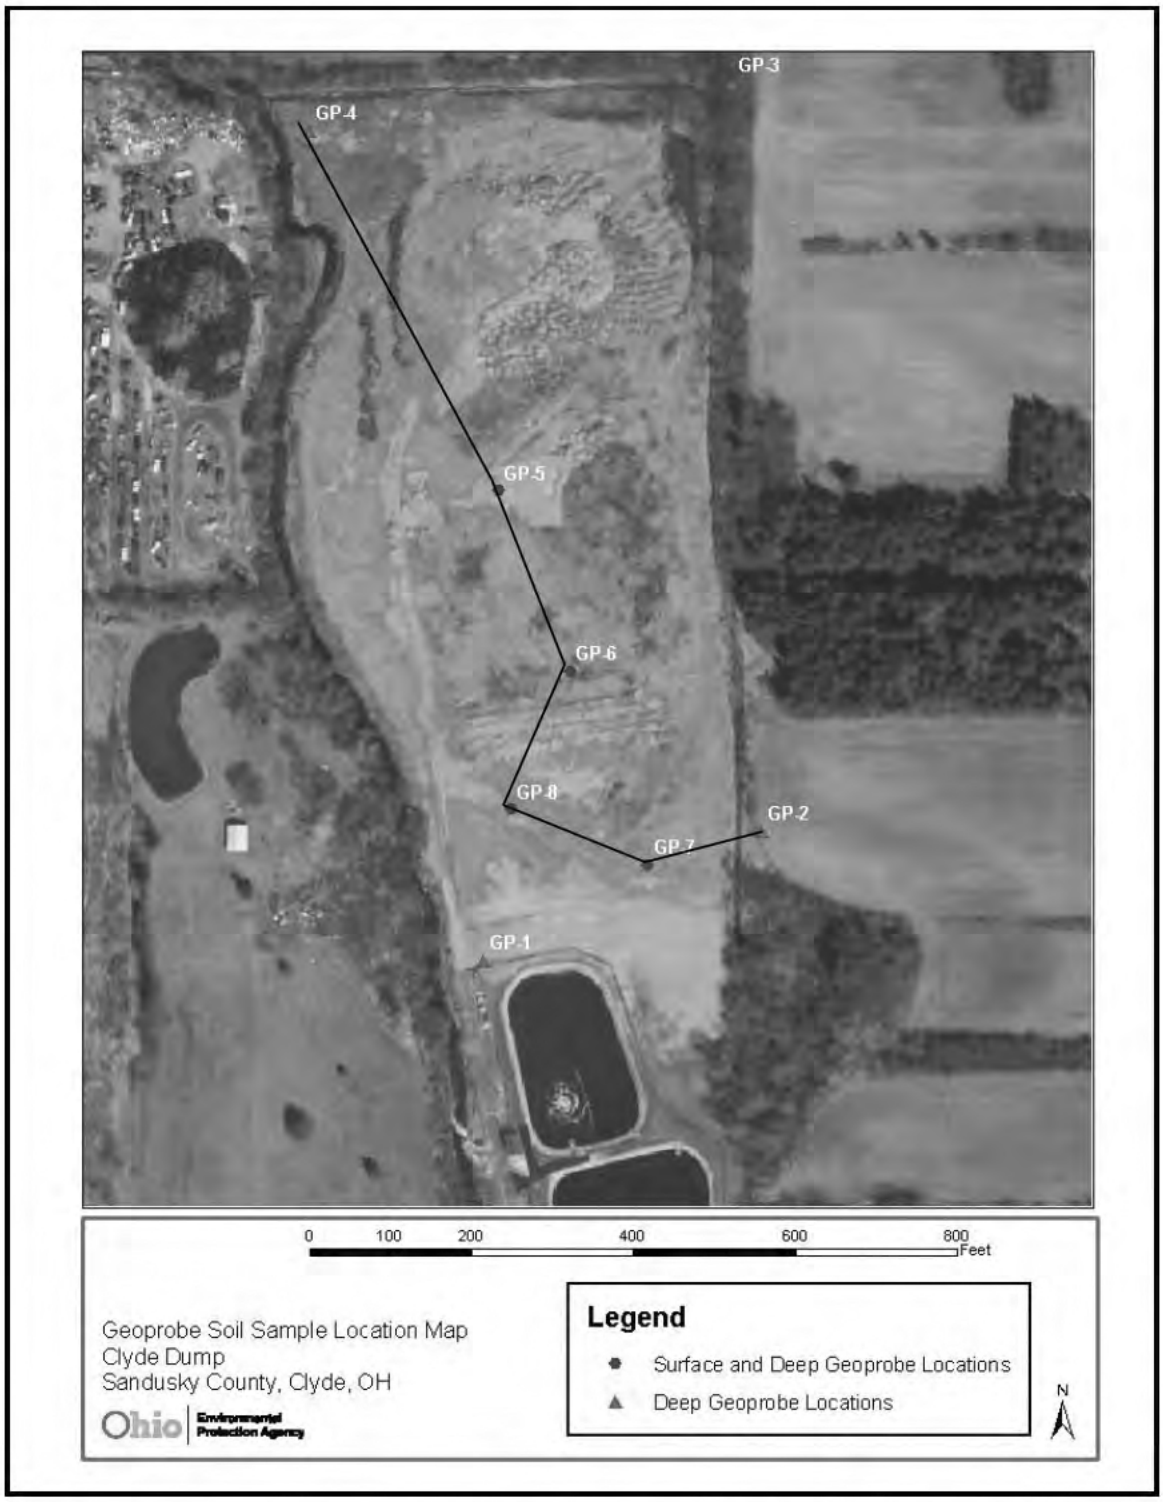

Figure 6: The soil borings are labeled GP-1 through GP-8 in this image of the Clyde Dump. Borings GP-1 through GP-4 are outside the limits of waste placement and borings GP-5 through GP-8 are inside the limits of waste placement. The black line in Figure 1 connecting GP-2 to GP-4 is the traverse of the geologic cross section shown in Figure 2.

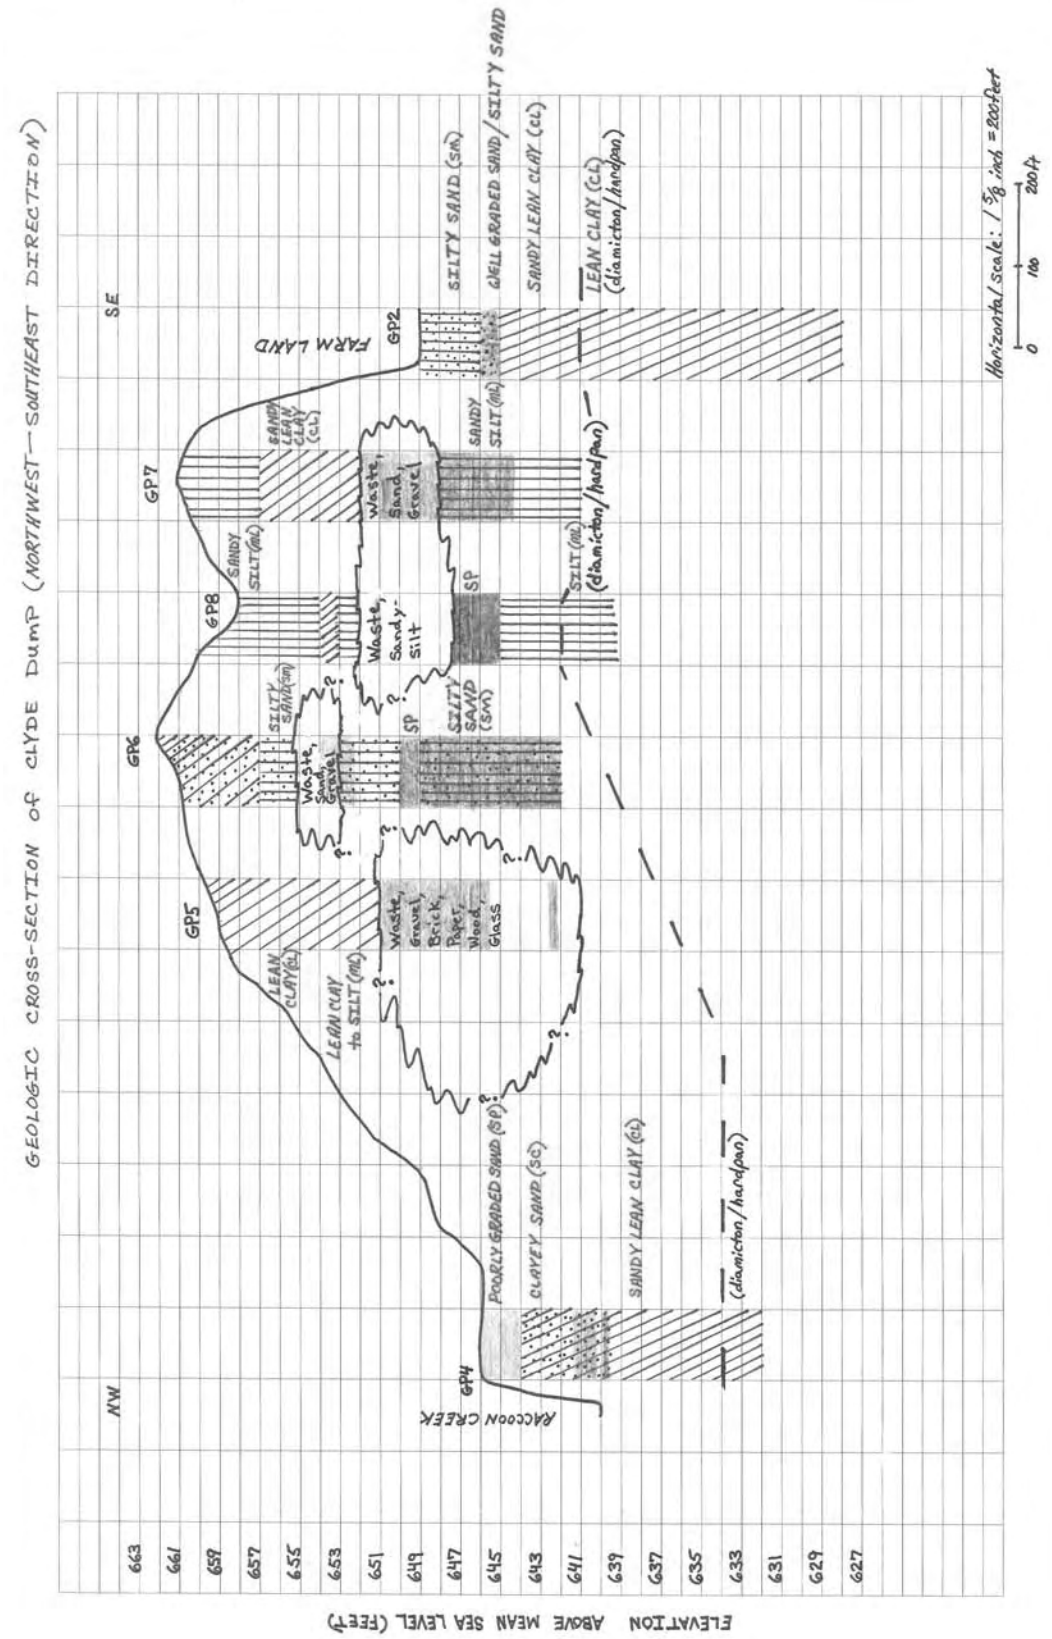

Figure 6: Saturated intervals are colored blue in this geologic cross section (see Figure 1). The dashed line marks the top of stratigraphic Unit 1.

Re: Clyde City Dump
3745-27-13 Authorization
Sandusky County

March 10, 2005

Mr. Dan Weaver
Manager
City of Clyde
222 North Main Street
Clyde, OH 43410

Dear Mr. Weaver:

Ohio EPA has reviewed your correspondence dated February 18, 2005, regarding site improvements to the closed Clyde City Dump, and has the following recommendations:

1. The Gas Company should be notified prior to conducting any work in the vicinity of the high pressure gas line located near the south end of the site;

2. While removing the field tiles near the northwest corner of the site, the eroded bank of Racoon Creek in this area should be graded back to an appropriate slope. Vegetation and rip-rap (if necessary) should be used to prevent further erosion upon completion of the regrading. Any other areas of bank erosion along the western perimeter of the site along Racoon Creek should be addressed in a similar manner. Also, debris that has accumulated in the creek bed should be removed and properly handled.

3. The facility cap must be replaced as required by paragraph (H) (9) of the rule. The cap specifications were previously transmitted to you and GGJ Inc. in e-mail correspondence dated November 05, 2004. Final slopes should be no less than one (1) percent and no greater than twenty-five (25) percent. The soil piles noted in the plan drawing near the center of the site should be graded to achieve appropriate final contours and slope .

4. The City may wish to consider installing a drainage tile in the existing east perimeter ditch prior to backfilling and reconstructing the eastern slope of the dump. This tile would drain to a sump where any intercepted leachate could be extracted. This low cost system could be useful to help control leachate should additional outbreaks occur along this slope in the future.

5. Upon completion of activities, a certification report as required by paragraph (H) (10) of the rule should be submitted to this office. In addition, the site should be mowed on a scheduled basis to prevent the overgrowth of trees and brush. Routine inspections of the site should be made so that problems can be identified and corrected in a timely fashion. A record of inspections and maintenance activities should be kept.

The proposed activities may occur in accordance with paragraph (H) (2) of the rule. Please notify this office at least 7 days prior to commencing major portions of the improvements so that routine inspections can be conducted if necessary.

If you have any questions concerning the above, please contact me at (419) 373-3040.

Sincerely,

Steven C. Snyder

Steven C. Snyder

Bowling Green, Ohio 43402

RE: City of Clyde Closed Landfill

Dear Mr. Snyder:

(11, 12) On behalf of the City of Clyde, we respectfully request authorization to perform excavation, filling, and grading at the Clyde Dump located at the Site of the Clyde WWTP (749 West McPherson Highway, Clyde Ohio 43410). This request is in conformance with the OAC 3745-27-13 (including all applicable portions of Part (H). The work will be performed in compliance with the requirements of Chapter 3734 of the Ohio Revised Code and as described herein.

Project Information *OAC3745-27-13 (F)(1-5)*

(1)	Name of the Facility:	Clyde Dump
(2)	Address of the Site:	749 West McPherson, Clyde Ohio 43410
(3)	County and Township:	Sandusky, Green Creek
(4)	Contact Name:	William Boyle, GGJ Inc.
	Phone Number:	(440) 953-1567

The Clyde Dump meets the description in OAC Chapter 3745-27-13 D(2)(a) that states, "An unlicensed or unpermitted solid waste landfill that ceased acceptance of waste prior to July 29, 1976.". Therefore, all work must be performed as described in OAC Chapter 3745-27-13 (F).

(5) The site covers approximately 11 acres to the North of the Clyde WWTP.

Proposed Work *OAC3745-27-13 (F)(6-9))*

(6) The Clyde Dump ceased operations in 1969 due to the implementation of the first solid waste law in the State of Ohio. It is presumed that the dump when in operation accepted for disposal municipal, commercial, and Industrial waste (From eye-witness accounts it was learned that much of the refuse that was accepted was burned). It is estimated that there is approximately 29,300 Cubic

◆ 222 North Main Street ◆ Clyde, Ohio 43410 ◆ Phone (419)547-6898 ◆ Fax (419)547-6626◆
◆ www.clydeohio.org ◆ email dweaver@clydeohio.org ◆

Yards of debris that is contained within this area and an additional 29,300 Cubic Yards of soil. This information was not obtained from records of receipts but by interpolation of existing contours and fill soil contours.

The site covers approximately 11 acres to the North of the Clyde WWTP. It is shown in the Site Location Map that is included with this package (this location is labeled as Site #1). The Site Location Map also shows a second site located to the south of the WWTP (Site #2) this site had previously been suspected of containing debris from the Clyde Dump. However, on January 21, 2005 exploratory borings (5) were performed at Site #2 and disproved the notion that this area accepted and contains refuse. Results of the borings have been sent to the Ohio EPA under correspondence dated, January 31, 2005, and are included in the Appendices of this report.

(7) The following is a list of the work that is being proposed at the Clyde Dump as well as an estimated schedule of when each portion is to be completed;

- The City will use their own personnel and equipment to eliminate both of the locations that are leaching into Raccoon Creek near the Southwestern area of the Dump Site. The work will include excavation of these areas and fill the areas with clay to prevent future leaching of these locations. If, during the course of this work any debris is encountered, the debris will be relocated towards the north side of the site where it can be properly buried and covered. The City will then grade this disturbed area and seed and mulch it to provide vegetative growth prior to the final grading of the site. This work is scheduled for completion during the Spring of 2005.
- The City will use their own personnel and equipment for the elimination of the two drainage tiles located in the Northwest corner of the landfill. The elimination of the tiles will include the removal of up to 20 feet of the buried tile. The City will excavate the existing tile and fill this area with clay. If, during the course of this work any debris is encountered, the debris will be relocated towards the north side of the site where it can be properly buried and covered. The City will then seed and mulch the disturbed areas to provide vegetative growth prior to the final grading of the site. This work is also scheduled to be completed in the Spring of 2005.
- The City will use their own personnel and equipment to remove the peninsula area located in the Southeast corner of the dump. This is the old Police Firing Range and was one of the areas that a boring was performed (location #1, See Appendix for results). The City will relocate this material towards the north side of the site where it can be properly buried and covered. The City will then seed and mulch the disturbed areas to provide vegetative growth prior to the final

grading of the site. The intent of this work is to remove all portions of the Dump located on or above the Columbiana Gas Transmission line. In doing so, the City will eliminate the potential excavation of debris should the transmission line ever need repairs. It should be noted that all debris placed in this area was done so on top of the previously existing grade. Therefore, this work will reestablish the previously existing grade above the transmission line. This work is also scheduled to be completed in the Spring of 2005.

- The final improvement that is being proposed is to relocate a section of the existing ditch that runs along the eastern and northern side of the site. This ditch receives the drainage from the site and discharges all flow into Raccoon Creek. The City plans on filling in the portion of the existing ditch that runs alongside the eastern edge of the dump site and relocate this segment of the ditch approximately 20 feet further East. This proposed work will also include increasing the cover over portions of the landfill and grading the entire area to provide positive overland flow to the ditch to the north and to the east (See attached the proposed Grading Plan). Seeding and mulching of the entire site will also be performed at this time. The City does not currently own the land where the proposed new ditch is to be located. Therefore, this work cannot be performed until the proper arrangements are made. It is anticipated that these arrangements will include the City purchasing this property (the City is beginning the process of contacting the existing owner to pursue title of the land). The proposed schedule for this work is dependent on when the City acquires rights to this land. It is estimated that the City will be able to begin the improvements during the Spring of 2006. The City will not attempt to do this work with their own forces but will hire a Contractor.

(8) The above-mentioned work will be performed in compliance with Ohio EPA regulations and direction.

(9) The following is a list of control measures to minimize pollution during construction;

- **Air Emissions**- The potential concern with air emissions during the construction of the proposed work is with dust caused during the grading of the site. The control of the dust will be done by wetting down the surface of the site to prevent the dust from traveling off the site.
- **Control leachate**- The areas where leaching is a concern are the locations along the west boundary of the dump near Raccoon Creek. The control of the leachate is the reason why work is being performed in these areas. During construction, the removal of the current fill in those areas will be done in such a way to contain

the leachate within one area (utilizing existing earth in place as containment walls) that will allow for it to be pumped and hauled to the Clyde WWTP

- **Surface Water Runoff and Run-on-** The dump site was constructed on top of existing grade. Therefore, the site sits higher than all land adjacent to it and is not impacted by surface water run-on. Surface water runoff will be a concern during the proposed work and will be addressed by the use of silt fencing around the perimeter of the Dump that will protect Raccoon Creek and the ditches surrounding the site. In addition, all areas that will be disturbed during construction will be immediately seeded and mulched to prevent long term surface water problems.
- **Protection of Ground Water-** It is not anticipated that the proposed work will impact ground water in the area. As stated previously, the dump was created on top of existing grade. Therefore, all work will be performed above the horizon in which the migration of groundwater occurs.

(10) The City owns all the land that the proposed work will be conducted with the exception of the location of the new ditch. As stated above the City plans on purchasing this land prior to the work being performed. When the land is purchased or the necessary agreements are made with the current owner the City will supply the Ohio EPA the proof of acknowledgement from the owner (either the City or the current owner). This letter shall be considered the acknowledgment for all land currently owned by the City.

We would appreciate your approval of this request. If there is any additional information necessary for approval of this request, please feel free to contact us.

(13) I hereby affirm that all assertions made within this application are to the best of my knowledge true.

City Of Clyde.

Sworn and subscribed to me this 22nd day of February, 2005

APPENDIX D

Site Specific Geology/Hydrogeology Report & Boring Logs

Interoffice Memo

Ohio Environmental Protection Agency

To: Steve Snyder, Site Coordinator, DERR-NWDO

From: Pete Sokoloski, through John Weaver, Geologist 4, DDAGW-NWDO

Date: November 28, 2011

Property: Clyde Dump Depot, located behind 749 West McPherson Highway, Clyde, OH 43410, Sandusky County.

Subject: August 2011 Fieldwork Findings **(5-10964)**

INTRODUCTION

The Division of Environmental Response and Revitalization (DERR) requested that the Division of Drinking and Ground Waters (DDAGW) describe and otherwise characterize soil cores extracted from the closed Clyde Dump (site) during fieldwork conducted on August 8 and 9, 2011. Background information including site history and regional geologic and hydrogeologic information is contained in the Ohio EPA-DERR Site Team Evaluation Prioritization (dated September 30, 1998) and the Site Characterization Work Plan (undated). The methodology and results of the August 2011 fieldwork are discussed below.

METHODOLOGY

Ohio EPA proposed to install up to four (4) ground water monitoring wells outside the limits of waste on the south, east, and north sides of the dump site. An additional four (4) borings locations were planned to characterize the stratigraphy and hydrogeology within the limits of waste. A GeoProbe® 5410 rig mounted on a Ford 450 truck was used to advance dual tubes with the intention of collecting continuous 4 foot long soil cores. Soil cores were described using the Ohio EPA-DERR-SIFU Field Guide for Soil Description (July 2009) which follows the Unified Soil Classification System (USCS). The field guide provided a useful reference for the uniform description of consistency, moisture content, plasticity, color, percent grain abundance, and soil type. Any loss of core was assumed to have occurred from the bottom of the run.

OBSERVATIONS

The borings ranged from 12 to 25 feet (ft) in depth with half the number of borings (GP-1, GP-3, GP-4, GP-5) ending at refusal. Figure 1 shows the location of the borings. Attempts were made to core toward the southwest end of the site, approximately 40 yards east of the creek. This attempt ended in refusal at 1.95 ft below ground surface (bgs). Refusal was met again at 4 ft bgs after moving the drill rig approximately 5 ft west of this point and again at 4 ft bgs after moving the rig an additional 20 yards to the north.

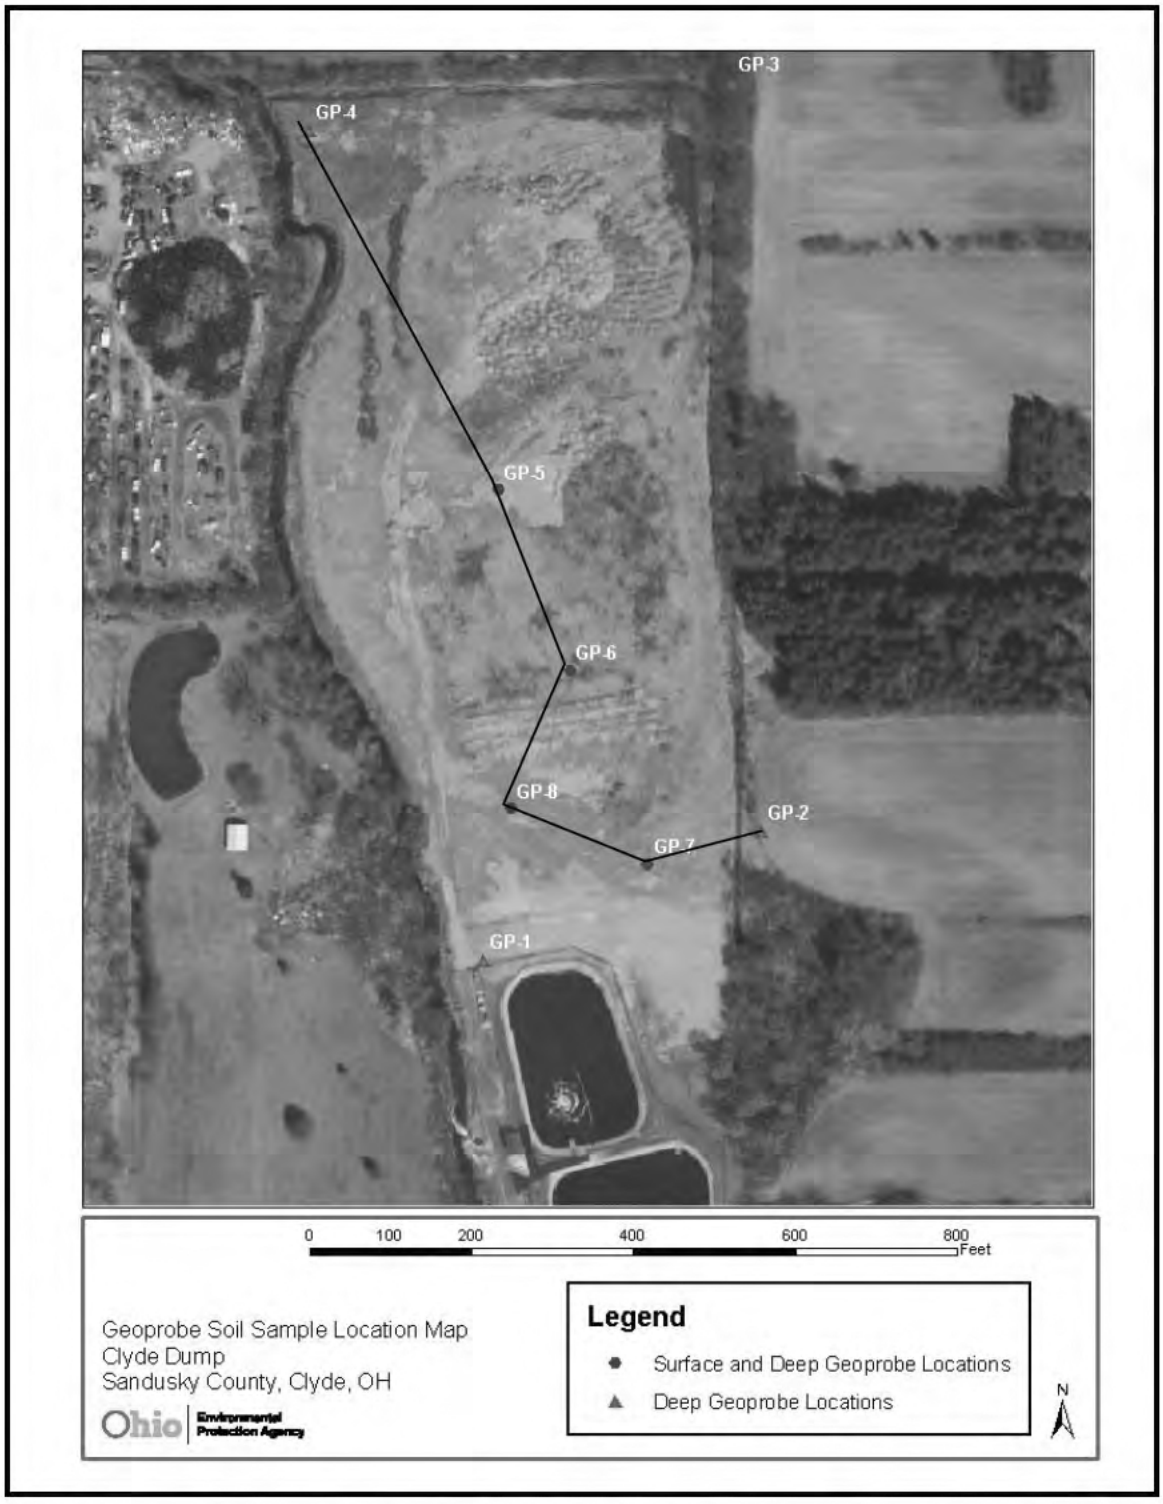

Figure 1: The soil borings are labeled GP-1 through GP-8 in this image of the Clyde Dump. Borings GP-1 through GP-4 are outside the limits of waste placement and borings GP-5 through GP-8 are inside the limits of waste placement. The black line in Figure 1 connecting GP-2 to GP-4 is the traverse of the geologic cross section shown in Figure 2.

The unconsolidated materials examined from the soil borings can be divided into 4 hydrogeologic units, discussed in ascending stratigraphic order as Units 1 through 4. **Unit 1** is a hard to very hard, grey lean clay (CL) or silt (ML) referred to in geologic literature as *diamicton*, or in archaic terms 'hardpan.' The top of this unit is shown in the geologic cross section in Figure 2 as a dashed-line and occurs beneath the site at depths of 8 to 19 ft bgs or approximate elevations of 641 to 634 ft from mean sea level (MSL). **Unit 2** is mainly brown lean clay or silt (measuring 8 to 10 ft thick) and typically located outside the limits of waste placement. **Unit 3** is grey silt or sand (measuring 0 to >11 ft thick). Unit 3 is a looser material than the other units, typically saturated, and occurs exclusively within the limits of waste placement based on present information. **Unit 4** is the waste material (measuring 2 to >10 ft thick) in the dump consisting of gravel, brick, paper, wood, glass, paint, lime/crushed limestone, plastic, wire/metal. Table 1 contains basic information about the completed borings and Table 2 describes the basic stratigraphy encountered. Detailed soil boring descriptions are included in Appendix A.

Staff that walked the parameter of the site located six leachate/ground water seeps near the creek (Figure 3). The maximum and minimum elevation of the seeps was 649.36 and 641.94 ft AMSL.

DISCUSSION

The geology/hydrogeology differs significantly outside the limits of waste at borings GP-1, GP-2, GP-3, and GP-4 compared to the sample locations inside the limits of waste placement at borings GP-5, GP-6, and GP-8 (Table 2).

Saturation outside the limits of waste placement is limited to intervals a foot thick, located within 6 ft of the surface. No saturated zones occur up to depths of 12 ft at boring GP-3. The grey silt of Unit 3 occurs beneath waste and in place of the brown lean clay to silt material of Unit 2. Unit 3 includes saturated, black-stained sand immediately below waste at GP-6 and GP-8, measuring 1 and 3 ft thick, respectively. Unit 3 is seen in borings GP-6, GP-7 and GP-8 with saturated thicknesses below waste of 8, 3 and 3 ft, respectively. Unit 3 may be present where waste is thickest at GP-5, however this boring did not extend below the interval containing waste (8 to 18 ft bgs).

The seeps on the west side of the site are at the same elevation as saturated zones within and below waste just east of the creek according to the geologic cross section in Figure 2. The presence of leachate/ground water seeps that are predominately on the west side of the site, and little to no saturation in the borings to the north, south and east, suggests that shallow ground water mainly flows towards the west and discharges as surface water to Raccoon Creek from perched ground water zones under the site.

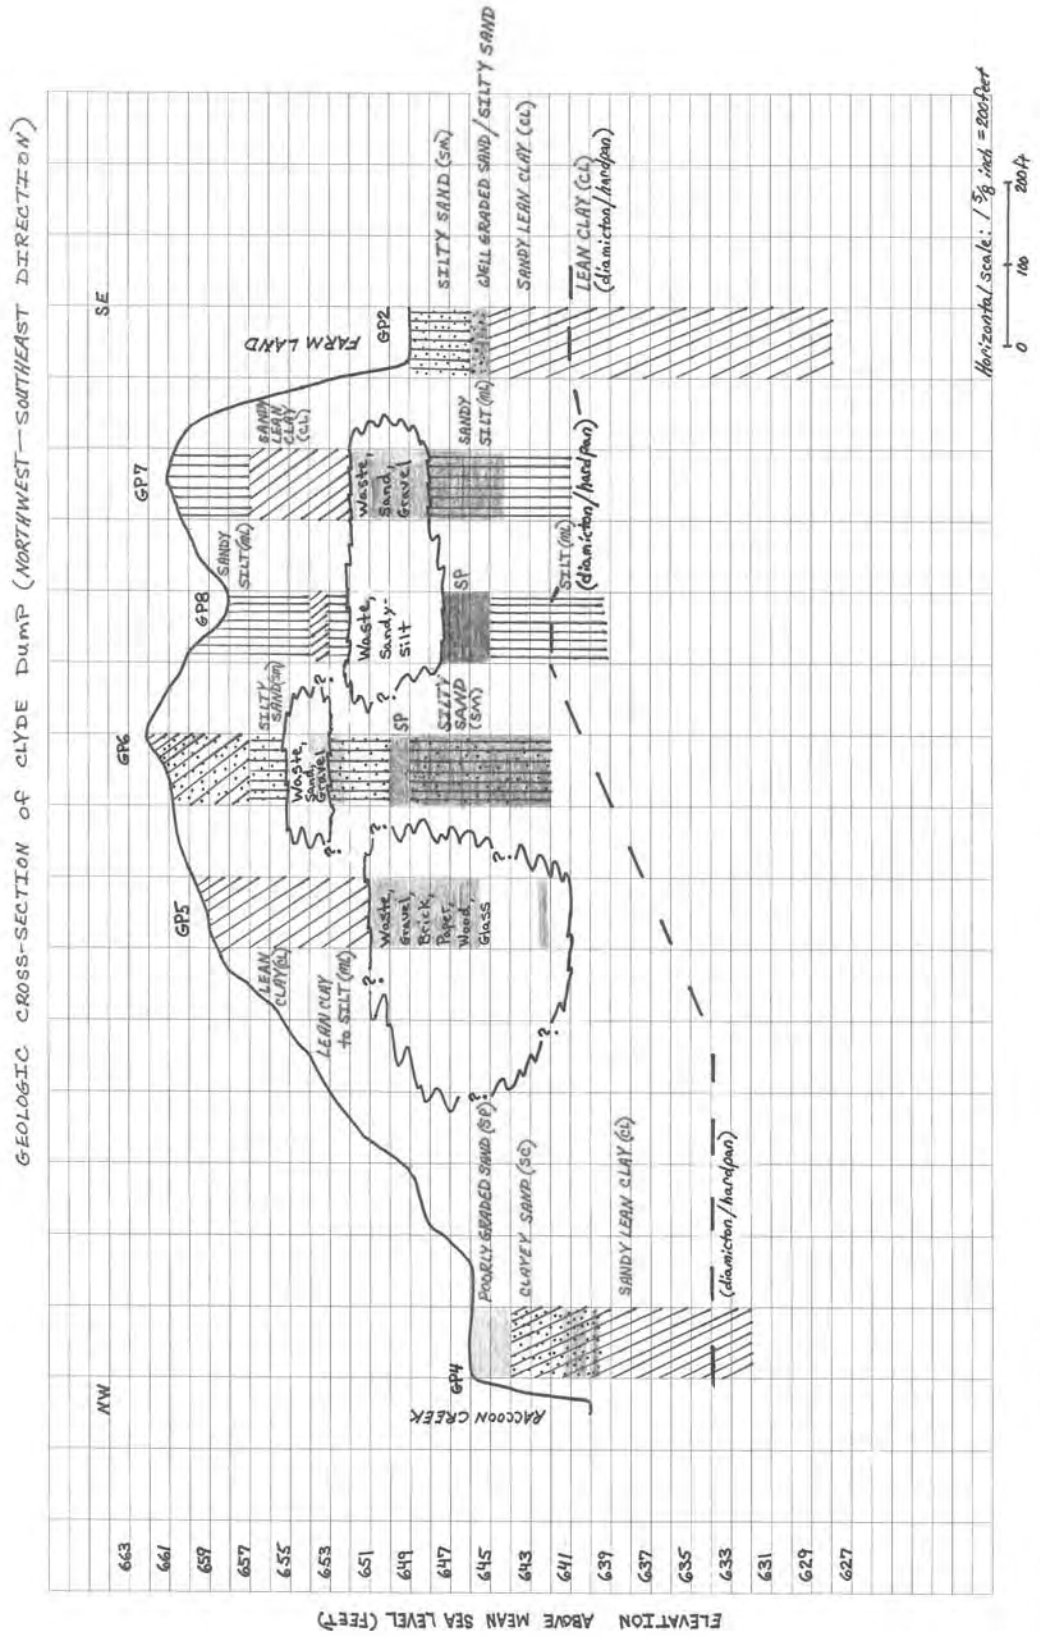

Figure 2: Saturated intervals are colored blue in this geologic cross section (see Figure 1). The dashed line marks the top of stratigraphic Unit 1.

Table 1: Soil boring information. The saturated interval shown includes saturated waste.

Location/Boring ID		Surface Elevation (ft MSL)	Total Depth (ft)	Bottom Elevation (ft MSL)	Saturated Interval (ft MSL)	Approximate Saturated Thickness (ft)
outside limits of waste placement	GP-1	653.20	25.3	628	652 to 651	1
	GP-2	648.64	20	629	645 to 644	1
	GP-3	646.97	12	635	none	none
	GP-4	645.87	14	632	641 to 640	1
inside limits of waste placement	GP-5	659.01	18	641	651 to 645 642.8 to 642.6	6 (in waste) 0.2 (in waste)
	GP-6	662.17	20	642	665 to 654 650 to 642	1 (in waste) 8
	GP-7	661.46	20	641	653 to 645	8 (upper 4 ft in waste)
	GP-8	658.04	18.5	640	648 to 645	3

Abbreviations and symbols used in Table 2: (ft) feet; (MSL) mean sea level; (≥) at least , i.e., greater than or equal to; (NP) not present; (E.O.B.) end of boring; (approx.) approximate; (elev) elevation; (ML) silt: defined under the Unified Soil Classification System (USCS) as fine-grained soil with 50 percent or more passing through a #200 sieve (0.075 mm mesh), liquid limit of less than 50 percent, and nonplastic to low plasticity; (CL) lean clay: defined under the USCS similar to silt, but exhibiting medium (to low) plasticity. (Diamicton) term commonly used in preference to 'tillite' describing an unlithified, conglomeratic, siliciclastic rock that is unsorted with sand and/or coarser particles dispersed through a mud matrix.

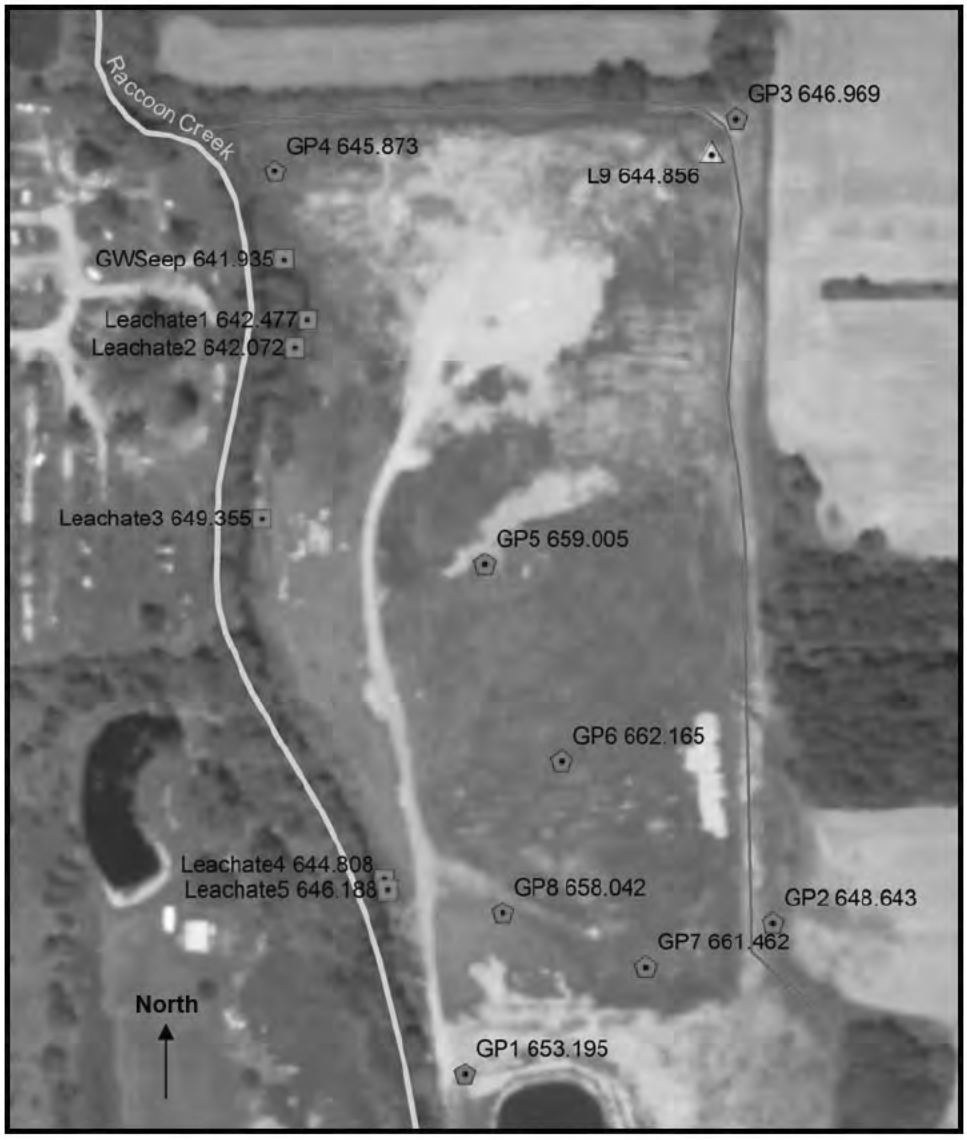

Figure 3: Site map showing the surface elevations of the boring locations (GP) and leachate/ground water seeps. Raccoon Creek ranges in elevation from 641.5 in the southern upstream portion to 638.1 in the northern downstream portion onsite. Elevations are in feet above mean sea level (ft AMSL).

CONCLUSION

Borings outside of waste did not encounter any significant continuous saturated zones beneath the site which could be monitored. Therefore, no ground water monitoring wells were installed at the site. All boreholes were backfilled with cuttings and granular bentonite. Additional work would be needed to determine the lateral extent of the perched ground water zones found beneath the site.

Level 3 Data Validation

We have reviewed the data for the following case:

SITE Name: Clyde Dump (OH)

Case Number: 41647 SDG Number: E5KS7

Number and Type of Samples: 12 Water Samples (12 VOA, 10 SVOA, 10 Pest, 10 Aro)

Sample Numbers: E5KS7- E5KS9, E5KT0- E5KT8

Laboratory: ALS Laboratory Group Hrs for Review:

Following are our findings:

CC: Howard Pham
Region 5 TPO
Mail Code: **SA-5J**

Case Number: 41647
Site Name: Clyde Dump (OH)

SDG Number: E5KS7
Laboratory: ALS Laboratory Group

Below is a summary of the out-of-control audits and the possible effects on the data for this case:

Twelve (12) water samples labeled E5KS7- E5KS9 and E5KT0-E5KT8, were shipped to ALS Laboratory Group located in Salt Lake City, UT. All samples were collected between 8/4/11 and 8/10/11 and received between 8/9/11 and 8/11/11 intact. All samples arrived at the proper shipping temperature range of 2 - 6°C, except for sample E5KS7 for the semivolatile, pesticide and aroclor analysis. Sample E5KS7 arrived in a cooler with a temperature of 20°C.

All samples were analyzed for the volatile list of compounds. Ten samples; E5KS7- E5KS9 and E5KT0-E5KT6, were analyzed for the semivolatile, pesticide and aroclor list of compounds. All samples were analyzed according to CLP SOW SOM01.2 (6/2007) and reviewed according to the NFG for SOM01.2 and the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.6).

Sample E5KS7 was designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses.

Sample E5KT7 and E5KT8 were identified as a trip blanks. Sample E5KT1 was identified as field duplicate but it is unclear as to which sample is its field duplicate.

Case Number: 41647
Site Name: Clyde Dump (OH)

SDG Number: E5KS7
Laboratory: ALS Laboratory Group

1. HOLDING TIME

No Problems Found.

2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

No Problems Found.

3. CALIBRATION

The following volatile samples are associated with an initial calibration with relative response factors (RRFs) outside criteria. The compound was not detected in the samples. Non-detected compounds are qualified "R".

E5KS7, E5KS7MS, E5KS7MSD, E5KS8, E5KS9, E5KT0, E5KT1, E5KT2, E5KT3, E5KT4, E5KT5, E5KT6, E5KT7, E5KT8, VBLKW1, VHBLKW1
1,4-Dioxane

The following volatile samples are associated with an initial calibration in which a DMC did not meet relative response factor (RRF) criteria. Detected and non-detected compounds are not qualified.

E5KS7, E5KS7MS, E5KS7MSD, E5KS8, E5KS9, E5KT0, E5KT1, E5KT2, E5KT3, E5KT4, E5KT5, E5KT6, E5KT7, E5KT8, VBLKW1, VHBLKW1
1,4-Dioxane-d8

The following volatile samples are associated with an opening continuing calibration percent difference (%D) outside criteria. The compound was not detected in the samples. Non-detected compounds are qualified "UJ".

E5KS7, E5KS7MS, E5KS7MSD, E5KS8, E5KS9, E5KT0, E5KT1, E5KT2, E5KT3, E5KT4, E5KT5, E5KT6, E5KT7, E5KT8, VBLKW1, VHBLKW1
Bromomethane

The following volatile samples are associated with an opening and closing continuing calibration with relative response factors (RRF) outside criteria. The compound was not detected in the samples. Non-detected compounds are qualified "R".

E5KS7, E5KS7MS, E5KS7MSD, E5KS8, E5KS9, E5KT0, E5KT1, E5KT2, E5KT3, E5KT4, E5KT5, E5KT6, E5KT7, E5KT8, VBLKW1, VHBLKW1
1,4-Dioxane

The following volatile samples are associated with an opening and closing continuing calibration in which a DMC did not meet relative response factor (RRF) criteria. Detected and non-detected compounds are not qualified.

E5KS7, E5KS7MS, E5KS7MSD, E5KS8, E5KS9, E5KT0, E5KT1, E5KT2, E5KT3, E5KT4, E5KT5, E5KT6, E5KT7, E5KT8, VBLKW1, VHBLKW1
1,4-Dioxane-d8

The following semivolatile samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. The compound was not detected in the samples. Non-detected compounds are not qualified.

E5KS8, E5KS9, E5KT0, E5KT1, E5KT2, E5KT3, E5KT4, E5KT5, SBLK55
Pentachlorophenol

4. BLANKS

The following volatile samples have common contaminant analyte concentrations reported less than 2x the CRQL. The associated trip blank has common contaminant analyte concentration less than 2x the concentration criteria. Detected compounds are qualified "U". Non-detected compounds are not qualified. Reported sample concentrations have been elevated to 2x the CRQL.

Acetone
E5KS7, E5KS7MS, E5KS7MSD, E5KS8, E5KS9, E5KT0, E5KT1, E5KT2, E5KT3, E5KT4, E5KT5, E5KT6

The following semivolatile samples have analyte concentrations reported less than the CRQL. The associated method blank concentration is less than the concentration criteria. Reported sample concentrations have been elevated to the CRQL and qualified "U".

Benzaldehyde
E5KS7, E5KS8, E5KS9, E5KT0, E5KT1, E5KT2, E5KT3, E5KT4, E5KT6

Acetophenone
E5KS9, E5KT0, E5KT1, E5KT2, E5KT3

Di-n-butylphthalate
E5KS8, E5KS9, E5KT0, E5KT1, E5KT2, E5KT3, E5KT4, E5KT5

Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(a)pyrene, Benzo(g,h,i)perylene
E5KT2

The following semivolatile samples have common contaminant analyte concentrations reported less than 5x the CRQL. The associated method blank has common contaminant analyte concentration less than 5x the concentration criteria. Detected compounds are qualified "U". Non-detected compounds are not qualified. Reported sample concentrations have been elevated to 5x the CRQL.

Bis(2-ethylhexyl)phthalate
E5KS8, E5KS9, E5KT0, E5KT2, E5KT5, E5KT6

The following semivolatile samples have TIC concentrations reported less than 5x the method blank concentration. Detected compounds are qualified "U" and deleted from the TIC report. See Section 12 for more information.

Unknown Benzo[c]thiophen-1(3H)-one, 3-(3-oxobenz @ 17.80
E5KS8, E5KT0, E5KT1, E5KT2, E5KT4

Unknown Benzo[c]thiophen-1(3H)-one, 3-(3-oxobenz @ 18.59
Unknown Naphthalene, 1,2,3,4-tetrahydro-2-phenyl @ 23.66
E5KS7

Unknown Phthalic anhydride @ 18.59
Unknown 2-Propenamide, N-[4,5-dihydro-5-oxo-2ph @ 23.66
E5KT6

Unknown Octadecanoic acid, ethenyl ester @ 20.34
E5KT0

Unknown Picolinyl 8-(5-hexyl-2-furyl)-octanoate @ 22.09
E5KS8, E5KS9, E5KT3, E5KT4, E5KT5

CAS No. 107-41-5 Hexylene Glycol
E5KS8, E5KS9, E5KT0, E5KT1, E5KT2, E5KT3, E5KT4, E5KT5

5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY

The following semivolatile sample has deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E5KT6
4-Chloroaniline, Hexachlorocyclopentadiene, Fluoranthene, Pyrene, 3,3'-Dichlorobenzidine, Benzo(a)anthracene, Chrysene, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

The following pesticide sample has surrogate recovery below the lower limit (30%) but greater than or equal to the expanded lower limit (10%) of the criteria window. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E5KT6
alpha-BHC, beta-BHC, delta-BHC, gamma-BHC (Lindane), Heptachlor, Aldrin, Heptachlor epoxide, Endosulfan I, Dieldrin, 4,4'-DDE, Endrin, Endosulfan II, 4,4'-DDD, Endosulfan sulfate, 4,4'-DDT, Methoxychlor, Endrin ketone, Endrin aldehyde, alpha-Chlordane, gamma-Chlordane, Toxaphene

The following aroclor sample has surrogate recovery below the lower limit (30%) but greater than or equal to the expanded lower limit (10%) of the criteria window. The compounds were not detected in the samples. Non-detected compounds are qualified "UJ".

E5KT6
Aroclor-1016, Aroclor-1221, Aroclor-1232, Aroclor-1242, Aroclor-1248, Aroclor-1254, Aroclor-1260, Aroclor-1262, Aroclor-1268

6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

Sample E5KS7 was designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses.

No Problems Found.

6B. LABORATORY CONTROL SAMPLE

No Problems Found.

7. FIELD BLANK AND FIELD DUPLICATE

Sample E5KT1 was identified as field duplicate but it is unclear as to which sample is its field duplicate.

Sample E5KT7 and E5KT8 were identified as a trip blanks. Results are summarized in the following table:

	E5KT7	E5KT8
Volatile analytes:	µg/L	µg/L
Acetone	6.4	5.6
# of VOA TICs	0	0

8. INTERNAL STANDARDS

No Problems Found.

Case Number: 41647
Site Name: Clyde Dump (OH)

SDG Number: E5KS7
Laboratory: ALS Laboratory Group

9. COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms it appears that all volatile, semivolatile, pesticide and aroclor compounds were properly identified.

The following pesticide samples had concentrations not confirmed by the second column analysis but reported on the Laboratory QC Form Is. The compounds were reported by the laboratory properly as non-detected compounds and qualified "U".

E5KS7MS
Alpha-BHC, delta-BHC, Heptachlor epoxide, Endosulfan II, 4,4'-DDD, Endosulfan sulfate, Methoxychlor, Endrin aldehyde, alpha-Chlordane

E5KS7MSD
Alpha-BHC, beta-BHC, delta-BHC, Heptachlor epoxide, Endosulfan II, Endosulfan sulfate, Methoxychlor, Endrin aldehyde, gamma-Chlordane

PLCSW1
Heptachlor, Endrin aldehyde

PLCSW2
4,4'-DDT, Endrin ketone, Endrin aldehyde

PLCSW3
Alpha-BHC, delta-BHC, Heptachlor, Aldrin, Endrin aldehyde

10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following volatile samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J".

E5KS8, E5KT0, E5KT1
m,p-Xylene

E5KT7, E5KT8
Acetone

VBLKW1
Methylene chloride

The following semivolatile samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J".

E5KS7
Naphthalene, 2-Methylnaphthalene, Atrazine, Bis(2-ethylhexyl)phthalate

E5KS7MS, E5KS7MSD
Atrazine, Bis(2-ethylhexyl)phthalate, 2,3,4,6-Tetrachlorophenol

E5KS8, E5KS9, E5KT4
Atrazine

E5KT0, E5KT1
Dimethylphthalate, Atrazine

E5KT2
Phenol, Dimethylphthalate, Atrazine, Phenanthrene, Fluoranthene, Pyrene

E5KT3
Phenol, Caprolactam, Dimethylphthalate, Diethylphthalate, Atrazine, Fluoranthene

E5KT6
Phenol, Acetophenone, 2,4-Dimethylphenol, Naphthalene, Diethylphthalate, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

SBLK55
Benzaldehyde, Acetophenone, Di-n-butylphthalate, Butylbenzylphthalate, 3,3'-Dichlorobenzidine, Benzo(a)anthracene, Chrysene, Bis(2-ethylhexyl)phthalate, Di-n-octylphthalate, Benzo(b)fluoranthene, Benzo(k)fluoranthene, Benzo(a)pyrene, Indeno(1,2,3-cd)pyrene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

SBLK94
Benzaldehyde, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

SBLK95
Benzaldehyde, Bis(2-ethylhexyl)phthalate

A library search indicates a match below 85% for a TIC compound in the semivolatile sample. Detected compounds are qualified "J".

Unknown 3-Cyclohexyl-1-propyne @ 6.08
Unknown 4H-1-Benzothiopyran-4-one, 2,3-dihydro-, @ 22.08
E5KT2

Unknown Benzene, 1-methyl-2-(1-methylethyl)- @ 7.60
Unknown Adamantane-1-ethynyl @ 10.99
Unknown Phthalic acid, 4-methoxyphenyl 2-methylp @ 21.55
E5KT6

Unknown Sydonone, 3-phenyl- @ 10.02
Unknown 2-Pyridinecarbonitrile @ 10.43
Unknown 1H-Benzotriazole, 5-methyl- @ 11.10
Unknown Benzaldehyde, 3-(4-fluorophenoxymethyl)- @ 14.89
Unknown Xanthine, 1,3-dimethyl-8-[2-[2-methylph @ 17.80
E5KT3

Unknown 1(2H)-dibenzofuranone, 3,4-dihyrdro-8-met @ 12.33
E5KT3, E5KT5

Unknown Phthalic acid, bis(7-methyloctyl) ester @ 15.03
Unknown b-Homomorphinan-7-one, 5,6,8,14-tetradehy @ 22.07
E5KT1

Unknown 2-Undecen-4-ol @ 17.26
Unknown Benzo[c]thiphen-1(3H)-one, 3-(3-oxobenz @ 18.59
Unknown Naphthalene, 1,2,3,4-tetrahydro-2-phenyl @ 23.66
SBLK94

Unknown 3-Methoxy-D-homoestra-1,3,5(10),8-tetrae @ 17.80
E5KS9

Unknown Phthalic anhydride @ 17.80
E5KT5

Unknown Benzo[c]thiophen-1(3H)-one, 3-(3-oxobenz @ 17.80
Unknown Octadecanoic acid, ethenyl ester @ 20.36
Unknown Picolinyl 8-(5-hexyl-2-furyl)octanoate @ 22.09
SBLK55

Unknown Phthalic anhydride @ 18.59
Unknown 2-Propenamide, N-[4,5-dihydro-5-oxo-2-ph @ 23.66
SBLK95

Unknown Palmitic acid vinyl ester @ 20.35
E5KS9, E5KT1, E5KT2, E5KT3

Unknown 16-Hexadecanoyl hydrazide @20.35
E5KS8

Unknown 2-[4-Chlorophenyl]-6-chloro-8-trifluoro @ 22.07
E5KT0

A library search indicates a match at or above 85% for a TIC compound in the semivolatile sample. Detected compounds are qualified "NJ".

CAS No. 57-10-3 n-Hexadecanoic acid
E5KS8, E5KS9, E5KT6

CAS No. 70-55-3 Benzenesulfonamide, 4-methyl-
CAS No. 85-44-9 Phthalic anhydride
CAS No. 88-19-7 Benzenesulfonamide, 2-methyl-
CAS No. 98-73-7 Benzoic acid, p-tert-butyl-
CAS No. 13798-23-7 Sulfur
E5KT6

CAS No. 77-71-4 2,4-Imidazolidinedione, 5,5-dimethyl-
CAS No. 1002-84-2 Pentadecanoic acid
E5KT3

CAS No. 107-41-5 Hexylene Glycol
SBLK55

CAS No. 136-85-6 1H-Benzotriazole, 5-methyl-
E5KS9, E5KT0, E5KT2, E5KT3

CAS No. 301-02-0 9-Octadecenamide, (Z)-
E5KS7

CAS No. 1610-18-0 Prometon
E5KS7, E5KS9, E5KT3

CAS No. 29878-31-7 1H-Benzotriazole, 4-methyl-
E5KS8, E5KT1, E5KT4

The following pesticide samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J".

E5KS7MS, E5KS7MSD
4,4'-DDE, Endrin ketone

E5KS9
Endrin

E5KT2
gamma-Chlordane

E5KT3, E5KS7MSD
4,4'-DDE

E5KT4
4,4'-DDT

E5KT5
gamma-BHC (Lindane)

E5KT6
beta-BHC

PLCSW1
gamma-BHC (Lindane), Heptachlor epoxide, Dieldrin, 4,4'-DDE, Endosulfan sulfate, gamma-Chlordane

PLCSW2
gamma-BHC (Lindane), Heptachlor epoxide, Dieldrin, 4,4'-DDE, Endosulfan sulfate

PLCSW3
gamma-BHC (Lindane), Heptachlor epoxide, Dieldrin, 4,4'-DDE, gamma-Chlordane

The relative percent difference between analyte results for the following pesticide water sample is greater than 25% and the sample value is less than 25% of the CRQL. The detected compound is qualified "U" as false positives. The reported sample concentration has been elevated to the CRQL.

E5KS7
beta-BHC, gamma-BHC (Lindane), Endosulfan I, 4,4'-DDE, Endrin ketone

E5KS7MS
beta-BHC, Endosulfan I, gamma-Chlordane

E5KS7MSD
Endosulfan I, 4,4'-DDD, alpha-Chlordane

E5KS8
gamma-BHC (Lindane), Heptachlor, Heptachlor epoxide, Dieldrin, 4,4'-DDE, 4,4'-DDT, Endrin aldehyde, alpha-Chlordane, gamma-Chlordane

E5KS9
Heptachlor, Heptachlor expoxide, Dieldrin, 4,4'-DDT, Endrin ketone, Endrin aldehyde, alpha-Chlordane, gamma-Chlordane

E5KT0
gamma-BHC (Lindane), Heptachlor, Dieldrin, 4,4'-DDE, 4,4'-DDT, Endrin aldehyde, alpha-Chlordane, gamma-Chlordane

E5KT1
gamma-BHC (Lindane), Heptachlor, Heptachlor epoxide, Dieldrin, 4,4'-DDE, 4,4'-DDT, Endrin ketone, Endrin aldehyde, alpha-Chlordane, gamma-Chlordane

E5KT2
Heptachlor, Heptachlor epoxide, 4,4'-DDE, 4,4'-DDT, Endrin ketone, Endrin aldehyde, alpha-Chlordane

E5KT3
Heptachlor, Endrin aldehyde, alpha-Chlordane

E5KT4
Dieldrin, gamma-Chlordane

E5KT5
beta-BHC, Dieldrin, 4,4'-DDE, Endrin ketone

E5KT6
gamma-BHC (Lindane), Aldrin, 4,4'-DDE, Endosulfan sulfate

PBLKW1
Endrin ketone

PBLKW2, PBLKW3
beta-BHC

PLCSW1, PLCSW3
4,4'-DDT, Endrin ketone

The relative percent difference between analyte results for the following pesticide water sample is greater than 25% and the sample value is greater than 25% of the CRQL. Detected compounds are qualified "J".

E5KT5
gamma-BHC (Lindane)

PLCSW1
Endosulfan sulfate

The following aroclor samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J".

ALCSW1, ALCSW2
Aroclor-1016

Case Number: 41647
Site Name: Clyde Dump (OH)

SDG Number: E5KS7
Laboratory: ALS Laboratory Group

11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance. The GC baseline for the pesticide and aroclor analysis was acceptable.

12. ADDITIONAL INFORMATION

The Semivolatile Sample Summary Reports does not include the TICs without CAS Numbers. Please refer to the TIC Report – NFG #9 for a complete list of the TICs associated with following samples.

E5KS8, E5KS9, E5KT0, E5KT1, E5KT2, E5KT3, E5KT5, E5KT6, SBLK55, SBLK94, SBLK95

The following semivolatile samples have a compound identified by CAS No. in some samples and as an Unknown TIC in other samples. A comparison of the chromatograms demonstrated that the same compound was present in the respective samples. Copies of the chromatograms are included with the validation report. See Section 4 for more information.

Unknown @ 3.54
E5KT2, E5KT4, E5KT5
versus
CAS No. 107-41-5 Hexylene Glycol
SBLK55

Unknown @ 17.80
E5KS8, E5KT0, E5KT1, E5KT2
versus
Unknown Benzo[c]thiophen-1(3H)-one, 3-(3-oxobenz @ 17.80
SBLK55

Unknown @ 22.09
E5KS9, E5KT4, E5KT5
versus
Unknown Picolinyl 8-(5-hexyl-2-furyl)-octanoate @ 22.09
SBLK55

Unknown @ 18.59
Unknown @ 23.66
E5KS7
versus
Unknown Benzo[c]thiophen-1(3H)-one, 3-(3-oxobenz @ 18.59
Unknown Naphthalene, 1,2,3,4-tetrahydro-2-phenyl @ 23.66
SBLK94

Unknown @ 23.66
E5KT6
versus
Unknown 2-Propenamide, N-[4,5-dihydro-5-oxo-2ph @ 23.66
SBLK95

The following pesticide samples were not included in the sample summary or superset. Form Is are included with the hard copy data package.

PLCSW1, PLCSW2, PLCSW3

The following aroclor samples were not included in the sample summary or superset. Form Is are included with the hard copy data package.

ALCSW1, ALCSW2, ALCSW3

CADRE Data Qualifier Sheet

Qualifiers	Data Qualifier Definitions
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
NJ	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
R	The data are unusable. (The compound may or may not be present.)

SUBJECT: Review of Data
Received for Review on 2 Sept 2011

FROM: Timothy Prendiville, Supervisor (**SR-6J**)
Superfund Contract Management Section

TO: Data User: OEPA

We have reviewed the data for the following case:

SITE NAME: Clyde Dump (OH)

CASE NUMBER: 41647 SDG NUMBER: E5KS7

Number and Type of Samples: 12 water samples

Sample Numbers: E5KS7-S9; TO-T8

Laboratory: ALS Laboratory Group Hrs for Review:

Following are our findings:

CC: Howard Pham
Region 5 TPO
Mail Code: **SA-5J**

General SDG Information: Samples were analyzed according to USEPA CLP Statement of Work SOM01.2. There were no deviations from the SOW except as listed below.

Instrumentation: Agilent 5975-E GC/MSD with electron impact ionization and quadrupole detector scanning at a mass range of 35 to 300 amu.
Column: RTX-VMS - 30 meters, 0.25 mm id., 1.4 µm film
Temperature Program: 45°C (5.0 min) 15°/min ramp to 200° ;30°/min ramp to 220°C
Carrier Gas: Helium Purge Gas: Helium
Purge & Trap Device: OI Analytical-Eclipse 4660 & Varian Archon
Purge Flow: 40 mL/min Trap: OI #10 Trap Temp: 35°C Heated Purge: 40°C

Sample Preparation: This method has no extraction procedure for the water matrix. Five milliliters of water sample was spiked with Internal Standard/DMC Solution and purged.

Instrument Calibration: The GC/MS was hardware tuned to meet the criteria for a 50 ng purging of 4-Bromofluorobenzene as specified in the SOW. This tune check is valid for 12 hours.

Initial and Continuing Calibration Verification: The five point initial calibration curve, which was analyzed prior to sample analysis, met the specified criteria in the SOW except for the minimum RRF for the Dioxanes. A continuing calibration standard (CCAL) was analyzed prior to sample analysis. A final calibration standard (FCAL) was analyzed after sample analysis. All calibration standards met all method criteria as specified in the SOW except for the minimum RRF for the Dioxanes. Manual edits were made in the calibration standards and in some samples for various mis-called peaks. Every manual integration is noted by an "m" footnote on the quantitation report, and an additional graphics page is included for each manual integration to show how the peak was integrated. Analytes that required manual integrations are listed.

Sample	Initial Scan	Final Scan	Analyte

Blank Analysis: Method blanks were prepared using 5 mL of spiked reagent water. The blanks were analyzed prior to sample analysis and were free of volatile organic contaminants within the specifications of the SOW.

Sample Analysis: All deuterated monitoring compounds and internal standard area responses were within the required acceptance criteria. All samples were analyzed within ten days of verified sample receipt.

MS/MSD Analysis: Matrix spike (MS) and matrix spike duplicate (MSD) analyses for the samples were performed using sample E5KS7. The matrix spike compounds are 1,1-Dichloroethene, Benzene, Trichloroethene, Toluene, and Chlorobenzene; each is spiked in at a concentration of 50 µg/L. All percent recoveries and RPD's were within QC limits.

Miscellaneous Comments: As instructed in the SOW, alkanes are not reported separately on the Form 1J but rather are summarized as "total alkanes."

With regard to the naming of tentatively-identified compounds (TICs), spectral matches above 85 percent are reported as a specific isomer unless the analyst has a specific reason to assign a different name. The exact isomer configuration, as reported, may not be absolutely accurate. Reasons for assigning a TIC name other than the match with the highest fit value above 85% include: instances in which the analyst has previous experience with respect to a specific compound; when the first computer-generated match is a target compound and retention time information clearly indicates the TIC is in fact not the target compound; and when a specific compound name has already been assigned to a peak. Even though specific names will usually be given to TICs with spectral fits above 85%, it must be understood by the data user that TIC names are very tentative, and it cannot be assumed that the specific isomers reported are correct.

Sample Calculations:

Relative Response Factor: $RRF = \left[\frac{A_x}{A_{is}}\right]\left[\frac{C_{is}}{C_x}\right]$

Where A_x is the area of the characteristic ion for the compound to be measured, A_{is} is the area of the characteristic ion for the internal standard , C_{is} is the concentration of the internal standard, and C_x is the concentration of the compound to be measured.

Concentration in ug/L: $C = \left[\frac{(A_x)(I_s)(Df)}{(A_{is})(RRF)(V_o)}\right]$

Where I_s is the amount of internal standard spiked in ng (250 ng), Df is a dilution factor (1 if no dilutions are made), RRF is the mean relative response factor (assumed to be 1 for non target analytes) and V_o is the total volume purged in mL.

I certify that this Sample Data Package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy Sample Data Package and in the electronic data deliverable has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

SDG Narrative
Semivolatiles Fraction

Contract: EP-W-11-037
Case: 41647
SDG: E5KS7
Laboratory Name: DataChem Laboratories
DCL Set ID.: 1122167, 1122352, 1122348.
Sample No.: E5KS7, E5KS7MS, E5KS7MSD, E5KS8, E5KS9, E5KT0, E5KT1, E5KT2, E5KT3, E5KT4, E5KT5, E5KT6.
General SDG Information: Samples were analyzed according to USEPA CLP Statement of Work SOM01.2. There are no deviations from the SOW. All samples listed above are billable.

Instrumentation: Agilent GC/MS system (ID 5975-D and 5975-G)
Column: J&W Scientific DB-5ms column, 95% dimethyl-(5%)-diphenylsiloxane, nonpolar 30 m x 0.32 mm I.D. with a 0.50 µm film thickness

Sample Preparation: Samples were prepared as stated in the SOW.

Instrument Calibration: (i.e.DFTPP tunes) All tunes met ion intensity ratio requirements. All samples and standards were analyzed within the twelve hour CCV period.

Initial and Continuing Calibration Verification: All initial and continuing calibration standards met minimum response factor, RSD and %D criteria.

Blank Analysis: The extraction blanks met method criteria.

Sample Analysis: All samples passed internal standard area and DMC recovery QC criteria.

MS/MSD Analysis: An MS/MSD analysis was performed on sample E5KS7.

Dilutions: None.

Miscellaneous Comments: Manual edits were made in the calibration standards for a variety of miscalled peaks. Every manual integration is noted by an "m" footnote on the quantitation report, and an additional graphics page is included for each manual integration to show how the peak was integrated. In order to satisfy the requirements of Exhibit B Section 2.5.1 which asks for a listing of each instance of manual integration, these manual integrations are also listed in the table below. The explanation for each of these manual integrations is that the data system did not correctly integrate the peak in its automated data evaluation procedure. More specifically, some of the more common mis-integrated peaks are described as follows: Indeno(1,2,3-c,d)pyrene elutes near dibenz(a,h)anthracene, and a hump from the 276 ion in dibenz(a,h)anthracene sometimes needs to be manually excluded from Indeno(1,2,3-c,d)pyrene. Isomers such as anthracene and benzo(a)anthracene are often called as the similar and

near-eluting phenanthrene or chrysene peak. Benzo(b) and Benzo(k)fluoranthene elute very closely to each other without baseline resolution between the two peaks. The automated peak finding routine quite often integrates both peaks as if they were one, and it is necessary to manually separate the isomers. 4-chloroaniline sometimes has the baseline drawn too high when the computer gets confused because of a near-eluting peak causing it to think the valley between peaks is actually the baseline. Bis(2-chloroethyl)ether sometimes needs to be manually separated from the near-eluting aniline. Caprolactam has a tail, especially at higher concentrations, that is often truncated, leaving the need to manually include the tail. Some phenolics and carbazole sometimes have the need to manually include the tailing. Acetophenone sometimes needs to be manually separated from a near-eluting 3-carbon alklyated benzene TIC peak. Benzo(ghi)perylene and dibenz(a,h)anthracene will sometimes be sliced in half by the automatic integration routine and a manual integration would be needed to include the entire peak. Perylene-d12 in the SIM analysis often needs to be manually separated from the baseline arising from benzo(a)pyrene-d12, a near-eluting and considerably larger isomer peak. Sometimes the automatic peak finding routine will simply miss a peak, making it necessary to manually include it. This was the case with all analytes not mentioned above.

Sample	Analyte	RT (min)	Scan start-stop

With regard to the naming of tentatively-identified compounds (TICs), spectral matches above 85 percent are reported as a specific isomer unless the analyst has a specific reason to assign a different name. Reasons for assigning a TIC name other than the match with the highest fit value above 85% include instances in which the analyst has previous experience with respect to a specific compound. When the first computer-generated match is a target compound and retention time information clearly indicates the TIC is in fact not the target compound, the analyst reserves the right to give a more appropriate tentative identification. There may be instances in which a specific compound name is assigned to more than one

peak. Even though specific names will usually be given to TICs with spectral fits above 85%, it must be understood by the data user that TIC names are very tentative, and it cannot be assumed that the specific isomers reported are correct. One case where specific names are not given to spectral matches above 85% is for alkanes, because the SOW requires alkanes to be reported as either straight-chain, branched or cyclic and summarized as "total alkanes."

Results on the raw data are expressed in units of ug/mL (micrograms per milliliter of the solution that was injected onto the GC/MS system). Final results are calculated by the following equations:

Water:

$$\text{Concentration } \mu g/L = \frac{(A_x)\,(I_s)\,(V_t)\,(DF)\,(GPC)}{(A_{is})\,(\overline{RRF})\,(V_o)\,(V_i)}$$

Soil:

$$\text{Concentration } \mu g/Kg \text{ (Dry weight basis)} = \frac{(A_x)\,(I_s)\,(V_t)\,(DF)\,(GPC)}{(A_{is})\,(\overline{RRF})\,(V_i)\,(W_s)\,(D)}$$

where all variables are as defined in Exhibit D/SVOA Sections 11.2.1.6 and 9.3.4.1.

Subject: Region 05 | Case 41647 | Lab DATAC | Issue Discrepancies with tags, jars, and/or TR/COC | FINAL

Roxy,

Summary Start
Issue: The TR/COC lists the analysis as TVOA; however, per scheduling samples for this Case require VOA analysis.
Resolution: In accordance with previous direction from Region 5, the laboratory will note the issue in the SDG Narrative, perform the analyses as indicated on the Scheduling Notification Form, and proceed with the analysis of the samples. The resolution will be applied to all TR/COCs received for this Case that list an incorrect analysis.
Summary End

Let me know if you have any additional questions.
Thanks,

Please note: To waive any defect(s) associated with this issue, please contact your PO.

Subject: RE: Region 05 | Case 41647 | Lab DATAC | Shipping information

Ryan:

We got the samples in for this case and we are getting ready to log them in. The TVOAs that you list below and which are listed on the TR are conflicting with what is scheduled. We will be logging the VOAs in for Low/Med VOAs instead of TVOAs as per the Scheduling Notification. Please give your confirmation that we have done the proper thing.

Subject: Region 05 | Case 41647 | Lab DATAC | Shipping information

Roxy,

Please note the shipping information for Case 41647 sent on 8/8 under airbill 866389086520 . This Case is still open. The sampler expects to send more samples later in the week.

1 Field QC CLP TCL Trace Volatiles (CLP TVOA)
1 Leachate CLP TCL PCB water (ARO water)
1 Leachate CLP TCL Pesticide water (PEST water)
1 Leachate CLP TCL Semivolatiles water (SVOA water)
1 Leachate CLP TCL Trace Volatiles (CLP TVOA)
7 Soil/Sediment CLP TCL Semivolatiles/Pesticides/PCBs (BNA/PEST)
8 Soil/Sediment CLP TCL VOA soil (VOA soil)
8 Surface Water CLP TCL PCB water (ARO water)
8 Surface Water CLP TCL Pesticide water (PEST water)
8 Surface Water CLP TCL Semivolatiles water (SVOA water)
8 Surface Water CLP TCL Trace Volatiles (CLP TVOA)

As I mentioned in my voicemail, the following samples will be shipped today (8/9) due to a leaky cooler under airbill 866389086552.
1 Surface Water CLP TCL PCB water (ARO water)
1 Surface Water CLP TCL Pesticide water (PEST water)
1 Surface Water CLP TCL Semivolatiles water (SVOA water)
1 Surface Water CLP TCL Trace Volatiles (CLP TVOA)

Please let me know if the laboratory has any questions pertaining to this particular Case or shipment. Your questions may help avoid future issues relating to the Case. This email is a summary of the analyses/samples shipped and does not replace the reporting of any TR/COC or Scheduling discrepancies.

HI Tori,

I just wanted to make sure you still wanted these sample analyzed. Region 5, has said if you don't want them run to cancel the samples, otherwise, have the lab note the temperature anomaly in the SDG Narrative and proceed with analysis.

DATAC is reporting the following Issue with Case 41647. Please advise the laboratory how to proceed.

Issue: The laboratory received organic samples at an elevated temperature of 20 degrees C. The laboratory has stated "Most likely, this cooler has sat warm for some time."

Let me know I f you have any questions.
Thanks,

Ryan Mroz
Environmental Coordinator - Regions 5 & 8

Subject: FW: Organic Case 41647

Ryan:

Please see Mere's comment concerning the shipment we received today for case 41647. It looks to me like the cooler was not re-iced before sending. Most likely, this cooler has sat warm for some time. We will wait to log that one in until last so in case the region opts to not analyze we will not have gone through the log in process.

DATE: 9/22/11

SUBJECT: **Review of Data**
Received for review on 9/2/11

FROM: **Timothy Prendiville, Supervisor, Chief (SR-6J)**
Superfund Contract Management Section

TO: **Data User:** OEPA
Email address: victoria.sigler@epa.state.oh.us

LEVEL 3 DATA VALIDATION

We have reviewed the data for the following case:

SITE NAME: Clyde Dump (OH)

CASE NUMBER: 41647 **SDG NUMBER:** ME5KS7

Number and Type of Samples: 10 waters

Sample Numbers: ME5KS7-S9, T0-T6

Laboratory: Chemtech **Hrs. for Review:** 9.0

Following are our findings:

CC: Howard Pham
Region 5 TPO
Mail Code: SA-5J

Below is a summary of the out-of-control audits and the possible effects on the data for this case:

Ten (10) water samples, numbered ME5KS7-S9, T0-T6, were collected on August 8-10, 2011. The lab received the samples on August 9-11, 2011 in good condition. All samples were analyzed for metals and cyanide. All samples were analyzed using the CLP SOW ISM01.2 analysis procedures.

Mercury analysis was performed using a Cold Vapor AA Technique. Cyanide analysis was performed using the MIDI Distillation procedure. The remaining inorganic analyses were performed using an Inductively Coupled Plasma-Atomic Emission Spectroscopy (ICP-AES) procedure.

EXES flagged all cyanide samples J-/R for improper preservation. In the EXES Superset Deliverable file, the pH entered was 2 for all analytes. The pH for cyanide should be entered in as 12. There is nothing in place for this reviewer to make the proper changes to the Superset Deliverable file. The flags for improper preservation have been removed from this reviewers report.

1. HOLDING TIME:

No defects were found.

2. CALIBRATIONS:

No defects were found for the calibrations.

3. BLANKS:

The following inorganic samples are associated with an ICB/CCB or preparation blank concentration which is greater than the method detection limit (MDL). The sample result is greater than the MDL.

Hits less than the CRQL are qualified "U". The sample result is raised to the CRQL.
Hits greater than the CRQL but less than 5 times the blank are qualified "J+".

Arsenic
ME5KS7, ME5KS8, ME5KS9, ME5KT0, ME5KT1, ME5KT2, ME5KT3, ME5KT4, ME5KT5

Chromium
ME5KS8, ME5KT1, ME5KT4

Iron
ME5KS8, ME5KS9, ME5KT0, ME5KT1

Thallium
ME5KT0, ME5KT6

Vanadium
ME5KS7, ME5KS8, ME5KS9, ME5KT0, ME5KT4, ME5KT5, ME5KT6

No samples were identified as field blanks.

4. MATRIX SPIKE/MATRIX SPIKE DUPLICATE AND LAB CONTROL SAMPLE:

No defects were found for matrix spike or laboratory control samples.

5. LABORATORY AND FIELD DUPLICATE:

No defects were found for the laboratory duplicate samples. No samples were identified as field duplicates.

6. ICP ANALYSIS:

No defects were found for the serial dilution or ICS samples.

7. SAMPLE RESULTS:

The following inorganic samples have analyte concentrations reported above the method detection limit (MDL) but below the quantitation limit (CRQL).

Results are qualified "J".

Aluminum
ME5KS7, ME5KS8, ME5KS9, ME5KT0, ME5KT1, ME5KT3, ME5KT4

Antimony
ME5KT6

Barium
ME5KS7, ME5KS8, ME5KS9, ME5KT0, ME5KT1, ME5KT2, ME5KT3, ME5KT4, ME5KT5

Beryllium
ME5KT6

Cadmium
ME5KS8, ME5KT2

Cobalt
ME5KS8, ME5KS9, ME5KT0, ME5KT1, ME5KT2, ME5KT4, ME5KT5

Copper
ME5KT2, ME5KT5

Lead
ME5KS7, ME5KS8, ME5KS9, ME5KT1, ME5KT2, ME5KT5

Manganese
ME5KT0, ME5KT1

Nickel
ME5KS7, ME5KS8, ME5KS9, ME5KT0, ME5KT1, ME5KT2, ME5KT3, ME5KT4, ME5KT5

Potassium
ME5KS7

Silver
ME5KT6

Zinc
ME5KS7, ME5KS8, ME5KS9, ME5KT0, ME5KT1, ME5KT2, ME5KT3, ME5KT4, ME5KT5

Cyanide
ME5KS8, ME5KT1, ME5KT3, ME5KT4, ME5KT6

All data, except those qualified above, are acceptable.

EXES ISM01.2 Data Qualifier Sheet

Qualifiers	Data Qualifier Definitions
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.
UJ	The analyte was analyzed for, but not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

CHEMTECH
284 Sheffield Street
Mountainside, NJ 07092

SDG NARRATIVE

USEPA
SDG # ME5KS7
CASE # 41647
CONTRACT # EPW09038
LAB NAME: CHEMTECH CONSULTING GROUP
LAB CODE: CHEM
CHEMTECH PROJECT # C3301

A. Number of Samples and Date of Receipt

10 Water Samples were delivered to the laboratory intact on 08/09/11 & 08/11/11.

B. Parameters

Test requested for Test requested for Metals CLP FULL =Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Vanadium, Zinc, Hg & CN.

C. Cooler Temp

Indicator Bottle: **Presence**/Absence
Cooler: 4°C & 5°C

D. Detail Documentation (related to Sample Handling Shipping, Analytical Problem, Temp of Cooler etc):

Issue 1: The laboratory received Regional copies of the TR/COCs.

Issue 2: No sample was designated for laboratory QC or they indicated that laboratory QC is not required on the TR/COC. Per scheduling, laboratory QC is required.

Issue 3: Additional samples were designated for laboratory QC on the TR/COC.

E. Corrective Action taken for above:

Resolution 1: In accordance with previous direction from Region 5, the laboratory will send the Regional copy of the TR/COC with the Regional data package (i.e., Complete SDG File). The laboratory will note the issue in the SDG Narrative and proceed with the analysis of the samples.

Resolution 2: In accordance with previous direction from Region 5, the laboratory will select a sample for laboratory QC as long as the sample is not a PE, blank, or rinsate sample and laboratory QC can be performed at full volume. The laboratory will note the issue in the SDG Narrative and proceed with the analysis of the samples

Resolution 3: In accordance with previous direction from Region 5, the laboratory will select one of the designated samples per matrix/analysis for laboratory QC. The laboratory will note the issue in the SDG Narrative, notify the SMO coordinator of the sample selected for laboratory QC, and proceed with the analysis of the samples

F. Analytical Techniques:

All analyses were based on CLP Methodology by method ISM01.2

G. Calculation:

Calculation example for ICP-AES Water Sample:

Results reported in Ug/L = Results in ppm X 1000 X Dilution Factor (if any) X Fraction of Sample Amount Taken in ICP Water- Prep

Fraction of Sample Amount Taken in ICP Water- Prep = 100/100 or 50/50 =1

(If 100 ml Initial Volume taken and Final Volume was made to 100 ml or 50 ml Initial Volume and Final Volume made to 50 ml in ICP-AES Water Digestion procedure).

Calculation example for Hg Water Sample:

Results reported in Ug/L = Results in ppb X Dilution Factor (if any) X Fraction of Sample Amount Taken in Water Hg-Prep.

Fraction of Sample Amount Taken in Water Hg-Prep = 100/100 =1

(If 100 ml Initial Volume taken and made it to Final Volume as 100 ml)

Calculation example for CN Water Sample:

Results reported in Ug/L = Results in Ug/L X Dilution Factor (if any) X Fraction of Sample Amount Taken in Water CN-Prep.

Fraction of Sample Amount Taken in Water CN-Prep = 50/50 =1
(If 50 ml Initial Volume taken and made it to Final Volume as 50 ml)

CHEMTECH
284 Sheffield Street
Mountainside, NJ 07092

H. QA/ QC

Calibrations met requirements. Interference check met requirements. Blank analyses did not indicate any presence of contamination. Laboratory Control sample was within control limits. Spike sample did meet requirements. Duplicate sample did meet requirements. Serial Dilution did meet requirements.

I certify that the data package is in compliance with the terms and conditions of the contract both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Director or his designee, as verified by the following signature.

Signature Mildred V Reyes Name: Mildred V. Reyes

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION V
SUPERFUND DIVISION

DATE:

SUBJECT: Review of Data
Received for Review on: August 30, 2011

FROM: Timothy Prendiville, Supervisor (SR-6J)
Superfund Contract Management Section

TO: Data User: OEPA
Email address: victoria.sigler@epa.state.oh.us; wendy.vorwerk@epa.state.oh.us

Level 3 Data Validation

We have reviewed the data for the following case:

Site Name: Clyde Dump (OH)

Case Number: 41647 SDG Number: E5KQ6

Number and Type of Samples: 8 soil samples (VOA, SVOA, Pest, Aroclor)

Sample Numbers: E5KQ6 – E5KQ9, E5KR0 – E5KR3

Laboratory: ALS Laboratory Group Hrs for Review:

Following are our findings:

CC: Howard Pham
Region 5 TPO
Mail Code: SA-5J

Case Number: 41647
Site Name: Clyde Dump (OH)

SDG Number: E5KQ6
Laboratory: ALS Laboratory

Below is a summary of the out-of-control audits and the possible effects on the data for this case:

Eight (8) soil samples labeled E5KQ6 – E5KQ9 and E5KR0 – E5KR3 were collected on 08/08/2011. The samples were received by ALS Laboratory Group located in Salt Lake City, UT on 08/09/2011. All samples arrived intact and at the proper shipping temperature range of 2 - 6°C. All samples were analyzed for the low level volatile, semivolatile, pesticide and aroclor target compounds. All samples were analyzed according to CLP SOW SOM01.2 (6/2007) and reviewed according to the NFG for SOM01.2 and the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.6).

Sample E5KQ6 designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses.

No samples were identified as field blanks or field duplicates.

1. HOLDING TIME

No problems were found.

2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

No problems were found.

3. CALIBRATION

The following volatile samples are associated with an initial calibration and CCV with relative response factors (RRFs) outside criteria. 1,4-Dioxane was not detected in the samples. Non-detected 1,4-Dioxane is qualified "R".

E5KQ6, E5KQ6MS, E5KQ6MSD, E5KQ7, E5KQ8, E5KQ8RE, E5KQ9, E5KR0, E5KR0RE, E5KR1, E5KR2, E5KR3, E5KR3RE, VBLKS1, VHBLKS1
1,4-Dioxane

The following volatile samples are associated with an initial calibration in which a DMC did not meet relative response factor (RRF) criteria. Detected and non-detected compounds are not qualified.

E5KQ6, E5KQ6MS, E5KQ6MSD, E5KQ7, E5KQ8, E5KQ8RE, E5KQ9, E5KR0, E5KR0RE, E5KR1, E5KR2, E5KR3, E5KR3RE, VBLKS1, VHBLKS1
1,4-Dioxane-d_8

The following semivolatile samples are associated with an initial calibration percent relative standard deviation (%RSD) outside criteria. Pentachlorophenol was not detected in the samples. Non-detected compounds are not qualified for this criterion. Non-detected Pentachlorophenol in E5KQ6 is ultimately qualified as "R" because of very low recovery in the spiked sample.

E5KQ6, E5KQ6MS, E5KQ6MSD, E5KQ7, E5KQ8, E5KQ9, E5KR0, E5KR1, E5KR2, E5KR3, SBLK48
Pentachlorophenol

4. BLANKS

The following volatile samples have common contaminant analyte concentrations reported less than 2x the CRQL. The associated method blank common contaminant concentration is less than 2x the concentration criteria. Detected compounds are qualified "U". Reported sample concentrations have been elevated to 2X the CRQL.

Acetone
E5KQ6, E5KQ6MS, E5KQ6MSD, E5KQ7, E5KQ9, E5KR0, E5KR0RE, E5KR1, E5KR2, E5KR3, E5KR3RE, VHBLKS1

The following volatile samples have common contaminant analyte concentrations reported greater than 2x the CRQL but less than 4X the CRQL. The associated method blank common contaminant concentration is less than 2x the concentration criteria. Detected compounds are qualified "U". Reported sample concentrations have been elevated to 4X the CRQL.

Acetone
E5KQ8, E5KQ8RE

The following volatile samples have common contaminant analyte concentrations reported less than 2x the CRQL. The associated storage blank common contaminant concentration is less than 2x the concentration criteria Detected compounds are qualified "U". Reported sample concentrations have been elevated to 2X the CRQL.

Methylene chloride
E5KQ6, E5KQ6MS, E5KQ6MSD, E5KQ7, E5KQ8, E5KQ8RE, E5KQ9, E5KR0, E5KR0RE, E5KR1, E5KR2, E5KR3, E5KR3RE

The following volatile samples have analyte concentrations reported less than the CRQL. The associated storage blank concentration is less than the concentration criteria. Detected compounds are qualified "U". Reported sample concentrations have been elevated to the CRQL. Toluene result in sample E5KQ6 is ultimately qualified as "UJ" because of non-compliant RPD in the MS/MSD. Toluene result in sample E5KR3RE is ultimately qualified as "R" because not all IS criteria was met.

Toluene
E5KQ6, E5KQ7, E5KQ9, E5KR0RE, E5KR1, E5KR2, E5KR3, E5KR3RE

The following volatile samples have analyte concentrations reported greater than the CRQL but less than 2x the CRQL. The associated storage blank is less than the concentration criteria. Detected compound is qualified "U". Reported sample concentrations have been elevated to 2x the CRQL.

Toluene
E5KR0

The following semivolatile samples have common contaminant concentrations reported less than 5x the CRQL. The associated method blank concentration is less than 5x the concentration criteria. Detected compound is qualified "U". Reported sample concentrations have been elevated to 5X the CRQL.

Bis(2-ethylhexyl)phthalate
E5KQ6, E5KQ6MS, E5KQ6MSD, E5KQ7, E5KQ8, E5KQ9, E5KR0, E5KR1, E5KR2, E5KR3

The following semivolatile samples have analyte concentrations reported less than the CRQL. The associated method blank concentration is less than the concentration criteria. Detected compounds are qualified "U". Reported sample concentrations have been elevated to the CRQL.

Benzaldehyde
E5KQ6, E5KQ6MS, E5KQ6MSD, E5KQ7, E5KQ8, E5KQ9, E5KR0, E5KR1, E5KR3

Di-n-butylphthalate
E5KQ6, E5KQ6MS, E5KQ6MSD, E5KQ7, E5KQ8, E5KQ9, E5KR0, E5KR1, E5KR2, E5KR3

The following SVOA samples have TIC concentrations reported less than 5x the associated method blanks concentrations. Detected compounds are qualified "U" and deleted from the TIC report.

Unknown Propane, 1-(1-methylethoxy)- @ 3.34
E5KQ7, E5KQ8, E5KQ9, E5KR1, E5KR2, E5KR3

Unknown Glycine, N-(2-cyanoethyl)- @ 3.44
E5KQ6, E5KQ7, E5KQ8, E5KQ9, E5KR0, E5KR1, E5KR2, E5KR3

Unknown 2-Propanone, O-methyloxime @ 4.00
E5KQ7

Unknown Phthalic anhydride @ 17.31 - 21.18
E5KQ6, E5KQ8, E5KQ9, E5KR0, E5KR1, E5KR2, E5KR3

Unknown Phthalic acid, monoethyl ester @ 17.33 - 21.13
E5KR0, E5KR3

5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY

The following volatile samples have DMC/SMC recoveries above the upper limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are not qualified.

E5KQ6MSD, E5KQ8, E5KR0, E5KR0RE
Benzene

E5KQ8RE
Cyclohexane, Benzene, Methylcyclohexane, 1,2-Dichloropropane, Bromodichloromethane

E5KR3, E5KR3RE
Dichlorodifluoromethane, Chloromethane, Vinyl Chloride, Bromomethane, Chloroethane, Carbon Disulfide, Cyclohexane, Benzene, Methylcyclohexane, 1,2-Dichloropropane, Bromodichloromethane

The following semivolatile samples have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E5KQ7, E5KQ8, E5KR1, E5KR3
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

E5KR0
4-Chloroaniline, Hexachlorocyclopentadiene, 3,3'-Dichlorobenzidine

6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

Sample E5KQ6 designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses.

The relative percent difference (RPD) between the following volatile matrix spike and matrix spike duplicate recoveries is outside criteria. The compounds were not detected in the unspiked sample. Non-detected compounds in the unspiked sample (E5KQ6) are qualified "UJ".

E5KQ6MS, E5KQ6MSD
Benzene, Trichloroethene, Toluene, Chlorobenzene

The relative percent difference (RPD) between the following semivolatile matrix spike and matrix spike duplicate recoveries is outside criteria. Detected Acenaphthene in the unspiked sample (E5KQ6) is qualified "J".

E5KQ6MS, E5KQ6MSD
Acenaphthene

The following semivolatile matrix spike/matrix spike duplicate samples have percent recoveries that are less than the lower acceptance limit. Detected Pyrene in the unspiked sample (E5KQ6) is qualified "J".

E5KQ6MS, E5KQ6MSD
Pyrene

The following semivolatile matrix spike/matrix spike duplicate samples have percent recoveries that are less than the expanded lower acceptance limit. Detected Phenol and Acenaphthene in the unspiked sample (E5KQ6) are qualified "J". Non-detected 2-Chlorophenol, N-Nitroso-di-n-

propylamine, 4-Chloro-3-methylphenol, 4-Nitrophenol, 2,4-Dinitrotoluene and Pentachlorophenol in the unspiked sample (E5KQ6) are qualified "R".

E5KQ6MS, E5KQ6MSD
Phenol, 2-Chlorophenol, N-Nitroso-di-n-propylamine, 4-Chloro-3-methylphenol, Acenaphthene, 4-Nitrophenol, 2,4-Dinitrotoluene, Pentachlorophenol

The relative percent difference (RPD) between the following aroclor matrix spike and matrix spike duplicate recoveries is outside criteria. Aroclor-1260 was not detected in the unspiked sample. Non-detected Aroclor-1260 in the unspiked sample (E5KQ6) is qualified "UJ".

E5KQ6MS, E5KQ6MSD
Aroclor-1260

6B. LABORATORY CONTROL SAMPLE

No problems were found.

7. FIELD BLANK AND FIELD DUPLICATE

No samples were identified as field blanks or filed duplicates.

8. INTERNAL STANDARDS

The following volatile samples have internal standard area counts that are outside the lower limit of primary criteria. Detected compounds are qualified "J". Non-detected compounds are qualified "R".

E5KQ6MSD, E5KQ8, E5KQ8RE, E5KR0, E5KR0RE, E5KR3
Bromoform, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, 1,2-Dichlorobenzene, 1,2-Dibromo-3-chloropropane, 1,2,4-Trichlorobenzene, 1,2,3-Trichlorobenzene

E5KR3RE
1,1,1-Trichloroethane, Cyclohexane, Carbon tetrachloride, Benzene, Trichloroethene, Methylcyclohexane, 1,2-Dichloropropane, Bromodichloromethane, cis-1,3-Dichloropropene, 4-Methyl-2-pentanone, Toluene, trans-1,3-Dichloropropene, 1,1,2-Trichloroethane, Tetrachloroethene, 2-Hexanone, Dibromochloromethane, 1,2-Dibromoethane, Chlorobenzene, Ethylbenzene, o-Xylene, m,p-Xylene, Styrene, Bromoform, Isopropylbenzene, 1,1,2,2-Tetrachloroethane, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, 1,2-Dichlorobenzene, 1,2-Dibromo-3-chloropropane, 1,2,4-Trichlorobenzene, 1,2,3-Trichlorobenzene

9. COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms it appears that all volatile, semivolatile, pesticide and aroclor compounds were properly identified.

10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following VOA samples have compound concentrations less than the CRQL. Detected compounds are qualified "J".

E5KQ6, E5KQ6MS, E5KQ6MSD
m,p-Xylene

E5KQ7
2-Butanone, Ethylbenzene, o-Xylene, m,p-Xylene, 1,4-Dichlorobenzene

E5KQ8, E5KQ8RE
Carbon disulfide, Ethylbenzene, o-Xylene, m,p-Xylene, 1,4-Dichlorobenzene

E5KQ9, E5KR0, E5KR0RE
Carbon disulfide, 2-Butanone, Ethylbenzene, o-Xylene, m,p-Xylene, 1,4-Dichlorobenzene

E5KR1
Carbon disulfide, m,p-Xylene, 1,4-Dichlorobenzene

E5KR2
2-Butanone

E5KR3
Carbon disulfide, Ethylbenzene, m,p-Xylene, 1,4-Dichlorobenzene

E5KR3RE
Ethylbenzene, m,p-Xylene, 1,4-Dichlorobenzene

VBLKS1
Acetone, 1,2,4-Trichlorobenzene, 1,2,3-Trichlorobenzene

VHBLKS1
Methylene chloride, Toluene

A library search indicates a match below 85% for a TIC compound in the VOA samples. Detected compounds are qualified "J".

Unknown Deuterated Trichloroethene @ 9.05
VHBLKS1

The following SVOA samples have compound concentrations less than the CRQL. Detected compounds are qualified "J".

E5KQ6
Phenol, Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Dibenzofuran, Diethylphthalate, Fluorene, Atrazine, Anthracene, Carbazole, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E5KQ6MS
Acetophenone, Naphthalene, 2-Methylnaphthalene, 1,1'-Biphenyl, Acenaphthylene, Acenaphthene, Dibenzofuran, Fluorene, Atrazine, Anthracene, Carbazole, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E5KQ6MSD
Acetophenone, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Dibenzofuran, Fluorene, Atrazine, Carbazole, Butylbenzylphthalate, Benzo(k)fluoranthene, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E5KQ7
Phenol, Acetophenone, 4-Methylphenol, Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Dibenzofuran, Fluorene, Anthracene, Carbazole, Dibenzo(a,h)anthracene

E5KQ8
Phenol, Acetophenone, 4-Methylphenol, Naphthalene, Acenaphthylene, Acenaphthene, Dibenzofuran, Fluorene, Anthracene, Carbazole, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E5KQ9
Phenol, 4-Methylphenol, Naphthalene, Acenaphthylene, Acenaphthene, Dibenzofuran, Fluorene, Anthracene, Carbazole, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E5KR0
Acetophenone, 4-Methylphenol, Naphthalene, Acenaphthylene, Acenaphthene, Dibenzofuran, Fluorene, Anthracene, Carbazole, Dibenzo(a,h)anthracene, Benzo(g,h,i)perylene

E5KR1
Acetophenone, Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Dibenzofuran, Fluorene, Anthracene, Carbazole, Butylbenzylphthalate, Dibenzo(a,h)anthracene

E5KR2
Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Dibenzofuran, Fluorene, Carbazole, Butylbenzylphthalate, Dibenzo(a,h)anthracene

E5KR3
Phenol, Acetophenone, Naphthalene, 2-Methylnaphthalene, Acenaphthylene, Acenaphthene, Dibenzofuran, Fluorene, Anthracene, Carbazole, Dibenzo(a,h)anthracene

SBLK48
Benzaldehyde, Di-n-butylphthalate, Bis(2-ethylhexyl)phthalate

A library search indicates a match at or above 85% for a TIC compound in the SVOA samples. Detected compounds are qualified "NJ".

E5KR2

Unknown cis,cis,cis-7,10,13-Hexadecatrienal @ 13.02;
Unknown 11H-Benzo[b]fluorene @ 13.76;
Unknown Pentanoic acid, 4-methyl-2-(2,5-dimethyloxazolo[@ 17.96;
Unknown Cholestan-3-ol, (3.alpha.,5.beta.)- @ 18.07;
Unknown Naphthalene, 1-(phenylmethyl)- @ 20.43;
Unknown Octadecyl trifluoroacetate @ 20.56;
Unknown 5-Bromo-4-oxo-4,5,6,7-tetrahydrobenzofurazan @ 21.51
E5KR3

Unknown 7H-Benz[de]anthracen-7-one @ 14.39
E5KR2, E5KR3

Unknown 28-Nor-17.alpha.(H)-hopane @ 17.97;
Unknown Cholestanol @ 18.06
E5KQ7, E5KR0

Unknown (1R,2S,8R,8Ar)-8-acetoxy-1-(2-hydroxyethyl)-1,2, @ 17.97 - 19.58;
Unknown 6-Isopropenyl-4,8a-dimethyl-4a,5,6,7,8,8a-hexahy @ 21.01
E5KQ7, E5KR1

Unknown Tetradecanoic acid, hexadecyl ester @ 18.43
E5KQ9, E5KR1, E5KR3

Unknown Dibenzo[def,mno]chrysene @ 18.78 - 19.03
E5KQ9, E5KR0, E5KR2

Unknown 4,4,6a,6b,8a,11,11,14b-Octamethyl-1,4,4a,5,6,6a, @ 20.42 - 20.86
E5KQ9, E5KR0, E5KR1

Unknown Picolinyl 8-(5-hexyl-2-furyl)-octanoate @ 21.15
E5KQ6, E5KQ7

The following pesticide samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J".

E5KQ6
4,4'-DDE, 4,4'-DDT, Endrin ketone

E5KQ6MS
Delta-BHC, 4,4'-DDE, 4,4'-DDD, Endrin ketone, alpha-Chlordane

E5KQ6MSD
4,4'-DDE, 4,4'-DDD, Endrin ketone

E5KQ7, E5KR3
4,4'-DDE, 4,4'-DDT

E5KQ8
beta-BHC, Dieldrin, 4,4'-DDD, 4,4'-DDT

E5KQ9, E5KR0
Dieldrin, 4,4'-DDE, 4,4'-DDT

E5KR1
delta-BHC, Heptachlor epoxide, Dieldrin, 4,4'-DDD, 4,4'-DDT

E5KR2
4,4'-DDE, Methoxychlor, Endrin aldehyde

PLCSS1
gamma-BHC (Lindane), Heptachlor epoxide, Dieldrin, 4,4'-DDE, Endrin, Endosulfan sulfate, 4,4'-DDT, gamma-Chlordane

The relative percent differences between analyte results for the following pesticide samples are greater than 25%. The results are less than 25% of the CRQL. Detected compounds are qualified "U" as false positives. Reported sample concentrations have been elevated to the CRQL.

E5KQ6
beta-BHC, delta-BHC, Heptachlor epoxide, Dieldrin, 4,4'-DDD

E5KQ6MS
beta-BHC, Heptachlor epoxide, Endrin aldehyde

E5KQ6MSD
beta-BHC, delta-BHC, Heptachlor epoxide

E5KQ7
delta-BHC, Heptachlor epoxide, 4,4'-DDD

E5KQ8
delta-BHC, Heptachlor epoxide, Endosulfan II, Methoxychlor

E5KQ9
beta-BHC, delta-BHC, Heptachlor epoxide, Endosulfan II, Methoxychlor

E5KR0
delta-BHC, Heptachlor epoxide, Endosulfan II, 4,4'-DDD

E5KR1
beta-BHC

E5KR2
Heptachlor epoxide, Dieldrin, Endosulfan II

E5KR3
beta-BHC, delta-BHC, Heptachlor epoxide, Methoxychlor

PBLKS1
delta-BHC

PLCSS1
delta-BHC, Heptachlor, Endrin ketone

The relative percent difference between analyte results for the following pesticide samples is greater than 25%. Detected compounds are qualified "J".

E5KQ6MS
gamma-BHC (Lindane), Heptachlor, Aldrin, 4,4'-DDE, 4,4'-DDD, 4,4'-DDT

E5KQ6MSD
gamma-BHC (Lindane), Aldrin, 4,4'-DDE

E5KQ7, E5KR3
4,4'-DDE, 4,4'-DDT

E5KQ8
Dieldrin, 4,4'-DDE, 4,4'-DDD, 4,4'-DDT

E5KQ9, E5KR0
Dieldrin, 4,4'-DDE, 4,4'-DDT

E5KR1
delta-BHC, Heptachlor epoxide, Dieldrin, 4,4'-DDE, 4,4'-DDD, 4,4'-DDT

E5KR2
4,4'-DDE, Methoxychlor, Endrin aldehyde, gamma-Chlordane

PLCSS1
Dieldrin, gamma-Chlordane

The following aroclor samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J".

ALCSS1
Aroclor-1016, Aroclor-1260

The relative percent differences between analyte results for the following aroclor samples are greater than 25%. Detected compounds are qualified "J".

E5KQ6MS, E5KQ6MSD
Aroclor-1260

11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance. The GC baselines for the pesticide and aroclor analyses were acceptable.

12. ADDITIONAL INFORMATION

EXES did not reported the following aroclor and pesticide samples. Form Is for these samples are included with the hard copy data package.

ALCSS1, PLCSS1

VOA and SVOA TICs with no CAS Numbers were not reported in the EXES Sample Summary Report. Please refer to Word document 41647 sdg E5KQ6 TIC for the validated TIC results.

Case Number: 41647
Site Name: Clyde Dump (OH)

SDG Number: E5KQ6
Laboratory: ALS Laboratory

CADRE Data Qualifier Sheet

Qualifiers	Data Qualifier Definitions
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
NJ	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
R	The data are unusable. (The compound may or may not be present.)

SUBJECT: Review of Data
Received for Review on 30 Aug 2011

FROM: Timothy Prendiville, Supervisor **(SR-6J)**
Superfund Contract Management Section

TO: Data User: OEPA

We have reviewed the data for the following case:

SITE NAME: Clyde Dump (OH)

CASE NUMBER: 41647 SDG NUMBER: E5KQ6

Number and Type of Samples: 8 Soil Samples

Sample Numbers: E5KQ6-Q9; E5KR0-R3

Laboratory: ANS Laboratory Group Hrs for Review:

Following are our findings:

CC: Howard Pham
Region 5 TPO
Mail Code: **SA-5J**

Sample Delivery Group (SDG)
Cover Sheet

SDG Number: E5KQ6

☒ ARO ☒ PEST ☒ BNA ☐ BNASIM ☐ VT ☐ VOASIM ☒ VLM

Laboratory Name: ALS Laboratory Group (SLC) Laboratory Code: DATAC

Contract No.: EPW11037 Case No.: 41647

Analysis Price: N/A SDG Turnaround: 21

Modified Analysis Requested: NO

Modification Reference No.: N/A

General SDG Information: Samples were analyzed according to USEPA CLP Statement of Work SOM01.2. There were no modifications except as listed below.

Instrumentation: Hewlett Packard 5972-S GC/MSD with electron impact ionization and quadrupole detector scanning a mass range of 35 to 300 amu. Column: J&W Scientific DB 624 (75 m, 0.53 mm id, 3 µm film). Purge & Trap: OI Analytical Eclipse 4660 Concentrator (#10 trap) with Varian Archon Autosampler. Carrier and Purge Gas: Helium. Purge Flow: ~35 mL/min. at ambient. Temperature Program: 45°C (3.5 min.) 10°/min. to 220° (2.0 min.).

Sample Preparation: This method has no extraction procedure for the low level soil matrix. Soil samples were received in wide mouth jars, were weighed out, and frozen until analysis. Prior to analysis a total of 10 mL of reagent water containing internal standard/DMC solution was added and the sample was purged.

Instrument Calibration: The GC/MS was hardware tuned to meet the criteria for a 50 ng purging of 4-bromofluorobenzene as specified in the SOW. This tune is valid for 12 hours.

Initial Calibration and Calibration Verification: The five point initial calibration curve met the specified criteria in the SOW with the exception of the dioxane compounds. All calibration verification standards met method specified criteria (again excepting dioxanes). Due to interfering ions, the secondary 55 ion was used in quantifying methylcyclohexane for some instrumentation. Any manual integration is noted by an "m" footnote on the quantitation report and a graphics page was included to show peak integration. Analytes which required a manual integration are summarized:

Sample	Initial Scan	Final Scan	Analyte

Blank Analysis: Method blanks were prepared using Ottawa Sand and reagent water spiked with internal standard/DMC solution. All blanks were free of volatile organic contaminants within the specifications of the method.

Sample Analysis: All deuterated monitoring compounds and internal standard area responses were within the required acceptance criteria unless otherwise noted on forms II and VIII. All samples were analyzed within ten days of verified sample receipt.

MS/MSD Analysis: MS/MSD analyses were performed for sample 1122168001 (E5KQ6).

Sample Calculations: All symbols are defined in section 8.3 of DCL SOP OV-EP-SOM and section 11.2 of SOM01.2. $RRF = (A_x C_{is})/(A_{is} C_x)$; Water Concentration = $(A_x I_s DF)/(V_o A_{is} \underline{RRF})$; Soil Conc.= $(A_x I_s DF)/(DW_s A_{is} \underline{RRF})$; Medium Level Conc. = $(A_x I_s A V_t DF)/(A_{is} \underline{RRF} V_a W_s D)$.

Miscellaneous Comments: As per the SOW, alkanes were not reported separately but rather were reported as "total alkanes." With regard to the naming of tentatively identified compounds (TICs), spectral matches above 85 percent are reported as a specific isomer unless the analyst has reason to assign a different name. Reasons include but are not limited to previous experience with the compound or an instance where the retention time clearly indicates that a computer generated match is in fact not the compound in question. A specific compound name may be assigned to more than one peak. In any case, TIC naming is tentative and it cannot be assumed that reported compounds and specific isomers are correct.

The hold blank contains a peak which has been tentatively identified as deuterated trichloroethene. The peak is present in many sample runs but is less than ten percent of the nearest internal standard and thus is not reported. It is believed that an unknown compound or solvent present in the sample vials is causing 1,1,2,2-tetrachloroethane-d2 to break down and form trichloroethene-d either by acting as a catalyst or through chemical reaction.

I certify that this sample data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy sample data package and in the electronic data deliverable has been authorized by the laboratory manager or the manager's designee, as verified by the following signature.

SDG Narrative
Semivolatiles Fraction

Contract: EP-W-11-037
Case: 41647
SDG: E5KQ6
Laboratory Name: DataChem Laboratories
DCL Set ID.: 1122168.
Sample No.: E5KQ6, E5KQ6MS, E5KQ6MSD, E5KQ7, E5KQ8, E5KQ9, E5KR0, E5KR1, E5KR2, E5KR3.
General SDG Information: Samples were analyzed according to USEPA CLP Statement of Work SOM01.2. There are no deviations from the SOW. All samples listed above are billable.

Instrumentation: Agilent GC/MS system (ID 5975-D)
Column: J&W Scientific DB-5ms column, 95% dimethyl-(5%)-diphenylsiloxane, nonpolar 30 m x 0.32 mm I.D. with a 0.50 µm film thickness

Sample Preparation: Samples were prepared as stated in the SOW.

Instrument Calibration: (i.e.DFTPP tunes) All tunes met ion intensity ratio requirements. All samples and standards were analyzed within the twelve hour CCV period.

Initial and Continuing Calibration Verification: All initial and continuing calibration standards met minimum response factor, RSD and %D criteria.

Blank Analysis: The extraction blank met method criteria.

Sample Analysis: All samples passed internal standard area and DMC recovery QC criteria.

MS/MSD Analysis: An MS/MSD analysis was performed on sample E5KQ6. Following analysis, it was discovered that there were no recoveries for the MS compounds in either the MS or MSD samples, indicating that they were not spiked. This discovery was made after sample hold times had expired. As a result of this fact and that recovery criteria is advisory only, it was decided to report the samples as is.

Dilutions: Sample E5KR2 required a 1:3 dilution.

Miscellaneous Comments: Manual edits were made in the calibration standards for a variety of miscalled peaks. Every manual integration is noted by an "m" footnote on the quantitation report, and an additional graphics page is included for each manual integration to show how the peak was integrated. In order to satisfy the requirements of Exhibit B Section 2.5.1 which asks for a listing of each instance of manual integration, these manual integrations are also listed in the table below. The explanation for each of these manual integrations is that the data system did not correctly integrate the peak in its automated data evaluation procedure. More specifically, some of the more common mis-integrated peaks are

described as follows: Indeno(1,2,3-c,d)pyrene elutes near dibenz(a,h)anthracene, and a hump from the 276 ion in dibenz(a,h)anthracene sometimes needs to be manually excluded from Indeno(1,2,3-c,d)pyrene. Isomers such as anthracene and benzo(a)anthracene are often called as the similar and near-eluting phenanthrene or chrysene peak. Benzo(b) and Benzo(k)fluoranthene elute very closely to each other without baseline resolution between the two peaks. The automated peak finding routine quite often integrates both peaks as if they were one, and it is necessary to manually separate the isomers. 4-chloroaniline sometimes has the baseline drawn too high when the computer gets confused because of a near-eluting peak causing it to think the valley between peaks is actually the baseline. Bis(2-chloroethyl)ether sometimes needs to be manually separated from the near-eluting aniline. Caprolactam has a tail, especially at higher concentrations, that is often truncated, leaving the need to manually include the tail. Some phenolics and carbazole sometimes have the need to manually include the tailing. Acetophenone sometimes needs to be manually separated from a near-eluting 3-carbon alkiyated benzene TIC peak. Benzo(ghi)perylene and dibenz(a,h)anthracene will sometimes be sliced in half by the automatic integration routine and a manual integration would be needed to include the entire peak. Perylene-d12 in the SIM analysis often needs to be manually separated from the baseline arising from benzo(a)pyrene-d12, a near-eluting and considerably larger isomer peak. Sometimes the automatic peak finding routine will simply miss a peak, making it necessary to manually include it. This was the case with all analytes not mentioned above.

With regard to the naming of tentatively-identified compounds (TICs), spectral matches above 85 percent are reported as a specific isomer unless the analyst has a specific reason to assign a different name. Reasons for assigning a TIC name other than the match with the highest fit value above 85% include instances in which the analyst has previous experience with respect to a specific compound. When the first computer-generated match is a target compound and retention time information clearly indicates the TIC is in fact not the target compound, the analyst reserves the right to give a more appropriate tentative identification. This was the case for the following TICs: retention time 16.69 minutes in sample E5KQ7 and 19.03 in sample E5KR0. There may be instances in which a specific compound name is assigned to more than one peak. Even though specific names will usually be given to TICs with spectral fits above 85%, it must be understood by the data user that TIC names are very tentative, and it cannot be assumed that the specific isomers reported are correct. One case where specific names are not given to spectral matches above 85% is for alkanes, because the SOW requires alkanes to be reported as either straight-chain, branched or cyclic and summarized as "total alkanes."

Results on the raw data are expressed in units of ug/mL (micrograms per milliliter of the solution that was injected onto the GC/MS system). Final results are calculated by the following equations:

Water:

$$\text{Concentration } \mu g/L = \frac{(A_x)\,(I_s)\,(V_t)\,(DF)\,(GPC)}{(A_{is})\,(\overline{RRF})\,(V_o)\,(V_i)}$$

Soil:

$$\text{Concentration } \mu g/Kg \text{ (Dry weight basis)} = \frac{(A_x)\,(I_s)\,(V_t)\,(DF)\,(GPC)}{(A_{is})\,(\overline{RRF})\,(V_i)\,(W_s)\,(D)}$$

where all variables are as defined in Exhibit D/SVOA Sections 11.2.1.6 and 9.3.4.1.

I certify that this Sample Data Package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy Sample Data Package and in the electronic data deliverable has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

Equation for Aroclors in soil samples (EQ. 9):

EQ. 9 Concentration Calculation for Soil Samples

$$\text{Concentration } \mu g/Kg \text{ (Dry weight basis)} = \frac{(A_x)\ (V_t)\ (DF)\ (GPC)}{(\overline{CF})\ (V_i)\ (W_s)\ (D)}$$

Where,

A_x = Area or height of the peak for the compound to be measured.

$\overline{CF}$ = Mean Calibration Factor from the specific five-point calibration (area/ng).

V_t = Volume of the concentrated extract in µL. (If GPC is not performed, then V_t = 10000 µL. If GPC is performed, then $V_t = V_{out}$).

V_i = Volume of extract injected in µL. (If a single injection is made onto two columns, use one half the volume in the syringe as the volume injected onto each column.)

$$D = \frac{100 - \%Moisture}{100}$$

W_s = Weight of sample extracted in g.

DF = Dilution Factor. The DF for analysis of soil/sediment samples by this method is defined as follows:

$$\frac{\text{µL most concentrated extract used to make dilution + µL clean solvent}}{\text{µL most concentrated extract used to make dilution}}$$

If no dilution is performed, DF = 1.0.

Equation for Aroclors in water samples (EQ. 7):

EQ. 7 Concentration Calculation for Water Samples

$$\text{Concentration µg/L} = \frac{(A_x)\,(V_t)\,(DF)\,(GPC)}{(\overline{CF})\,(V_o)\,(V_i)}$$

Where,

A_x = Area or height of the peak for the compound to be measured.

$\overline{CF}$ = Mean Calibration Factor from the specific five-point calibration (area/ng).

V_o = Volume of water extracted in mL (Note: for instrument and sulfur blanks assume a volume of 1000 mL).

V_i = Volume of extract injected in µL. (If a single injection is made onto two columns, use one half the volume in the syringe as the volume injected onto each column).

V_t = Volume of the concentrated extract in µL. (If GPC is not performed, then V_t = 10000 µL. If GPC is performed, then $V_t = V_{out}$).

DF = Dilution Factor. The DF for analysis of water samples by this method is defined as follows:

$$\frac{\text{µL most concentrated extract used to make dilution + µL clean solvent}}{\text{µL most concentrated extract used to make dilution}}$$

If no dilution is performed, DF = 1.0.

$GPC = \frac{V_{in}}{V_{out}}$ = GPC factor. (If no GPC is performed, GPC = 1.0).

V_{in} = Volume of extract loaded onto GPC column.

V_{out} = Volume of extracted collected after GPC cleanup.

I certify that this Sample Data Package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the electronic data deliverable has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

Subject: Region 05 | Case 41647 | Lab DATAC | Issue Broken samples | FINAL
Attachments: Organic Case 41647.pdf

Roxy,

Summary Start
Issue: The laboratory received sample ESKR1 with a cracked lid. There was neither loss of volume nor was there a possibility of contamination as the samples were in individual bags.
Resolution: In accordance with previous direction from Region 5, the laboratory will note the issue in the SDG Narrative and proceed with the analysis of the samples.
Summary End

Let em know if you have any additional questions.
Thanks,

Please note: To waive any defect(s) associated with this issue, please contact your PO.

Subject: Region 5 case 41647

Please advise Region 5, that I received sample E5KR1 for SVOA/PEST/PCB with a cracked lid. There was no loss of volume. All soil samples were received in a individual bag, so there was no chance for contamination.

Thanks
Mere

Subject: Region 05 | Case 41647 | Lab DATAC | Issue Non-standard matrix | FINAL

Roxy,

Summary Start
Issue: The percent solids value for sample E5KQ8 is less than 50% at 45.4%.
Resolution: Per Region 5, the laboratory note the issue (that the % solids was at 45.4%) in the SDG Narrative and proceed with analysis.
Summary End

Let me know if you have any additional questions.
Thanks,

Please note: To waive any defect(s) associated with this issue, please contact your PO.

Warren,

DATAC is reporting the following Issue with Case 41647. Please advise if the PROPOSED Resolution is acceptable to Region 5.

Issue: The percent solid value for sample E5KQ8 is less than 50% at 45.4%.
PROPOSED Resolution: Per Region 5, the laboratory note the issue (that the % solids was at 45.4%) in the SDG Narrative and proceed with analysis.

Controlled Document

ESAT 5.315.00038
ACA 9-8-11

Regional Transmittal Form

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION V

DATE: 9/2/11

SUBJECT: **Review of Data**
Received for review on 8/30/11

FROM: **Timothy Prendiville, Supervisor, Chief (SR-6J)**
Superfund Contract Management Section

TO: **Data User:** OEPA
Email address: victoria.sigler@epa.state.oh.us

LEVEL 3 DATA VALIDATION

We have reviewed the data for the following case:

SITE NAME: Clyde Dump (OH)

CASE NUMBER: 41647 **SDG NUMBER:** ME5KQ6

Number and Type of Samples: 8 soils

Sample Numbers: ME5KQ6-Q9, R0-R3

Laboratory: Chemtech **Hrs. for Review:** 10.5 + 2.5 QV 9/7/11

Following are our findings:

CC: Howard Pham
Region 5 TPO
Mail Code: SA-5J

Below is a summary of the out-of-control audits and the possible effects on the data for this case:

Eight (8) soil samples, numbered ME5KQ6-Q9, R0-R3, were collected on August 8, 2011. The lab received the samples on August 9, 2011 in good condition. All samples were analyzed for metals and cyanide. All samples were analyzed using the CLP SOW ISM01.2 analysis procedures.

Mercury analysis was performed using a Cold Vapor AA Technique. Cyanide analysis was performed using the MIDI Distillation procedure. The remaining inorganic analyses were performed using an Inductively Coupled Plasma-Atomic Emission Spectroscopy (ICP-AES) procedure.

No handwritten preparation logs were included. It is unclear whether the actual weight used for preparation of the samples was correct as listed.

The conversion calculation formula provided in the laboratory case narrative does not include unit values for several of the variables or multipliers within the equation. Reported sample results are calculated correctly.

1. HOLDING TIME:

The inorganic soil samples were reviewed for holding time violations using criteria developed for water samples. No defects were found.

2. CALIBRATIONS:

No defects were found for the calibrations.

3. BLANKS:

The following inorganic samples are associated with an ICB/CCB or preparation blank concentration which is greater than the method detection limit (MDL). The sample result is greater than the MDL.

Hits less than the CRQL are qualified "U". The sample result is raised to the CRQL.
Hits greater than the CRQL but less than 5 times the blank are qualified "J+".

Barium
ME5KQ6, ME5KR0, ME5KR3

Cadmium
ME5KQ6, ME5KQ7, ME5KQ8, ME5KQ9, ME5KR0, ME5KR1, ME5KR2, ME5KR3

Cobalt
ME5KQ6, ME5KR0, ME5KR2, ME5KR3

Potassium
ME5KQ6, ME5KQ7, ME5KR0, ME5KR2, ME5KR3

Selenium
ME5KQ6, ME5KQ7, ME5KQ8, ME5KQ9, ME5KR0, ME5KR2

Thallium
ME5KR2

Vanadium
ME5KR3

Cyanide
ME5KQ7, ME5KQ8, ME5KQ9, ME5KR1, ME5KR2, ME5KR3

4. MATRIX SPIKE/MATRIX SPIKE DUPLICATE AND LAB CONTROL SAMPLE:

The following inorganic samples are associated with a matrix spike recovery which is high (>125%) indicating that sample results may be biased high. The required post spike was performed and results were less than or equal to 125%.

Hits are qualified "J"; non-detects are not qualified.

Zinc

ME5KQ6, ME5KQ7, ME5KQ8, ME5KQ9, ME5KR0, ME5KR1, ME5KR2, ME5KR3

The following inorganic samples are associated with a matrix spike recovery which is low (30-74%) indicating that sample results may be biased low. The required post spike was performed and results were less than 75%.

Hits are qualified "J-" and non-detects are qualified "UJ".

Manganese

ME5KQ6, ME5KQ7, ME5KQ8, ME5KQ9, ME5KR0, ME5KR1, ME5KR2, ME5KR3

The following inorganic samples are associated with a matrix spike recovery which is extremely low (<30%) indicating that sample results may be biased low. The required post spike was performed and results were greater than or equal to 75%.

Hits are qualified "J" and non-detects are qualified "UJ".

Lead

ME5KQ6, ME5KQ7, ME5KQ8, ME5KQ9, ME5KR0, ME5KR1, ME5KR2, ME5KR3

No defects were found for the laboratory control sample.

5. LABORATORY AND FIELD DUPLICATE:

The following inorganic samples are associated with duplicate results which did not meet relative percent difference (RPD) primary criteria. Region 5 uses 35%RPD control criteria for soil samples.

Hits are qualified "J" and non-detects are qualified "UJ".

Lead

ME5KQ6, ME5KQ7, ME5KQ8, ME5KQ9, ME5KR0, ME5KR1, ME5KR2, ME5KR3

The following inorganic samples are associated with duplicate results which did not meet absolute difference (AD) primary criteria. Region 5 uses 2xCRQL difference criteria for soil samples.

Hits are qualified "J" and non-detects are qualified "UJ".

Arsenic

ME5KQ6, ME5KQ7, ME5KQ8, ME5KQ9, ME5KR0, ME5KR1, ME5KR2, ME5KR3

Chromium
ME5KQ6, ME5KQ7, ME5KQ8, ME5KQ9, ME5KR0, ME5KR1, ME5KR2, ME5KR3

No samples were identified as field duplicates.

6. ICP ANALYSIS:

The following inorganic samples are associated with an ICP serial dilution percent difference which is not in control.
Hits are qualified "J" and non-detects are qualified "UJ".

Chromium
ME5KQ6, ME5KQ7, ME5KQ8, ME5KQ9, ME5KR0, ME5KR1, ME5KR2, ME5KR3

Nickel
ME5KQ6, ME5KQ7, ME5KQ8, ME5KQ9, ME5KR0, ME5KR1, ME5KR2, ME5KR3

Vanadium
ME5KQ6, ME5KQ7, ME5KQ8, ME5KQ9, ME5KR0, ME5KR1, ME5KR2, ME5KR3

No defects were found for the ICS samples.

7. SAMPLE RESULTS:

The following inorganic samples have analyte concentrations reported above the method detection limit (MDL) but below the quantitation limit (CRQL).
Results are qualified "J".

Antimony
ME5KQ6, ME5KQ7, ME5KQ8, ME5KQ9, ME5KR0, ME5KR1, ME5KR2, ME5KR3

Beryllium
ME5KQ6, ME5KQ7, ME5KQ8, ME5KQ9, ME5KR0, ME5KR1, ME5KR2, ME5KR3

Mercury
ME5KQ7, ME5KQ8, ME5KR0, ME5KR1, ME5KR2, ME5KR3

Silver
ME5KQ6, ME5KQ7, ME5KQ8, ME5KQ9, ME5KR0, ME5KR1, ME5KR2, ME5KR3

Sodium

ME5KQ6, ME5KQ7, ME5KQ8, ME5KQ9, ME5KR0, ME5KR1, ME5KR2, ME5KR3

All data, except those qualified above, are acceptable.

EXES ISM01.2 Data Qualifier Sheet

Qualifiers	Data Qualifier Definitions
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.
UJ	The analyte was analyzed for, but not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

SDG NARRATIVE

USEPA
SDG # ME5KQ6
CASE # 41647
CONTRACT # EPW09038
LAB NAME: CHEMTECH CONSULTING GROUP
LAB CODE: CHEM
CHEMTECH PROJECT # C3300

A. Number of Samples and Date of Receipt

08 Soil Samples were delivered to the laboratory intact on 08/09/11.

B. Parameters

Test requested for METALS CLP FULL == Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Vanadium, Zinc & HG & CN..

C. Cooler Temp

Indicator Bottle: **Presence**/Absence
Cooler: 4°C

D. Detail Documentation (related to Sample Handling Shipping, Analytical Problem, Temp of Cooler etc):

Issue 1: The percent solids for sample ME5KQ8 is less than 50% at 46.9%.

Issue 2: The laboratory received Regional copies of the TR/COCs.

E. Corrective Action taken for above:

Resolution 1: Per Region 5, the laboratory note the issue (that the % solids was at 46.9%) in the SDG Narrative and proceed with analysis.

Resolution 2: In accordance with previous direction from Region 5, the laboratory will send the Regional copy of the TR/COC with the Regional data package (i.e., Complete SDG File). The laboratory will note the issue in the SDG Narrative and proceed with the analysis of the samples.

CHEMTECH
284 Sheffield Street
Mountainside, NJ 07092

F. Analytical Techniques:

All analyses were based on CLP Methodology by method ISM01.2

G. Calculation:

Calculation example for ICP-AES Soil Sample:

Conversion of Results from mg/L or ppm to mg/kg (Dry Weight Basis):

Results reported in Mg/Kg = (Result in mg/L or ppm for ICP-AES) X 1000 X Fraction of % Solid (100/ % Solid) X Dilution Factor (if any) X Fraction of Sample Amount Taken in ICP-Soil Prep.

Example of Fraction of Sample Amount Taken in ICP-AES Soil Prep = 1/10 (1.0 X10 or 0.50 X 20)
(if 1.0 g of sample taken during Digestion and the Final Volume was made to 100 ml or 0.5 g to Final Volume 50ml)

Or

Example of Fraction of Sample Amount Taken in ICP-AES Soil Prep = 1/10.2 (1.02 X 10 or 0.51 X 20)
(if 1.02 g of sample taken during Digestion and the Final Volume was made to 100 ml or 0.51 g to Final Volume 50ml)

Etc.

Calculation example for Hg Soil Sample:

Conversion of Results from ppb to mg/kg (Dry Weight Basis):

Results reported in Mg/Kg = (Result in ppb for Hg) X Fraction of % Solid (100/ % Solid) X Dilution Factor (if any) X Fraction of Sample Amount Taken in Prep.

Example of Fraction of Sample Amount Taken in Hg Soil Prep = 1/ 2 (0.2 X 10)
(if 0.2 g of sample taken during Digestion and the Final Volume was made to 100 ml)

Or

Example of Fraction of Sample Amount Taken in Hg Soil Prep = 1 / 2.1 (0.21 X 10)
(if 0.21 g of sample taken during Digestion and the Final Volume was made to 100 ml)

Etc.

CHEMTECH
284 Sheffield Street
Mountainside, NJ 07092

Calculation example for CN Soil Sample:

Conversion of Results from Ug/L to mg/kg (Dry Weight Basis):

Results reported in Mg/Kg = (Result in Ug/L for CN) X Fraction of % Solid (100/ % Solid) X Dilution Factor (if any) X Fraction of Sample Amount Taken in Prep.

Example of Fraction of Sample Amount Taken in CN Soil Prep = 1/20 (1 X 20)
(if 1.0 g of sample taken during Digestion and the Final Volume was made to 50 ml)

Or

Example of Fraction of Sample Amount Taken in Hg Soil Prep = 1 / 20.2 (1.01 X 20)
(if 1.01 g of sample taken during Digestion and the Final Volume was made to 50 ml)

Etc.

H. QA/ QC

Calibrations met requirements. Interference check met requirements. Blank analyses did not indicate any presence of contamination. Laboratory Control sample was within control limits. Spike sample did meet requirements except for Lead, Manganese and Zinc. Duplicate sample did meet requirements except for Aluminum, Arsenic, Chromium, Copper, Iron, Lead, Nickel and Zinc. Serial Dilution did meet requirements except for Arsenic, Chromium, Nickel and Vanadium.

I certify that the data package is in compliance with the terms and conditions of the contract both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Director or his designee, as verified by the following signature.

Signature Mildred V Reyes Name: Mildred V. Reyes

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION V
SUPERFUND DIVISION

DATE:

SUBJECT: Review of Data
Received for Review on: September 2, 2011

FROM: Timothy Prendiville, Supervisor (SR-6J)
Superfund Contract Management Section

TO: Data User: OEPA
Email address: victoria.sigler@epa.state.oh.us;
wendy.vorwerk@epa.state.oh.us

Level 3 Data Validation

We have reviewed the data for the following case:

Site Name: Clyde Dump (OH)

Case Number: 41647 SDG Number: E5KR4

Number and Type of Samples: 13 Soils (VOA, SVOA, Pesticide, Aroclor)

Sample Numbers: E5KR4 – E5KR9, E5KS0 – E5KS6

Laboratory: ALS Laboratory Group Hrs for Review:_____

Following are our findings:

CC: Howard Pham
Region 5 TPO
Mail Code: SA-5J

Case Number: 41647
Site Name: Clyde Dump (OH)

SDG Number: E5KR4
Laboratory: ALS Laboratory

Below is a summary of the out-of-control audits and the possible effects on the data for this case:

Thirteen (13) soil samples; E5KR4 thru E5KR9, and E5KS0 thru E5KS6, were collected on August 9 and 10, 2011. The samples were received by ALS Laboratory Group located in Salt Lake City, UT on August 10 and 11, 2011. All samples were received intact and at the proper shipping temperature range of 2 - 6°C.

All samples were analyzed for the volatile, semivolatile, pesticide, and aroclor target compounds. All samples were analyzed according to CLP SOW SOM01.2 (6/2007) and reviewed according to the NFG for SOM01.2 and the SOP for ESAT 5/TechLaw Validation of Contract Laboratory Program Organic Data (Version 2.6).

Sample E5KS6 was designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses.

No samples were identified as trip blanks, field blanks, or field duplicates.

Case Number: 41647
Site Name: Clyde Dump (OH)

SDG Number: E5KR4
Laboratory: ALS Laboratory

1. HOLDING TIME

No problems were found.

2. GC/MS TUNING AND GC INSTRUMENT PERFORMANCE

No problems were found.

3. CALIBRATION

The following volatile samples are associated with an initial calibration and CCVs with relative response factors (RRFs) outside criteria. The compound was not detected in the samples. Non-detected compounds are qualified "R".

E5KR4, E5KR4RE, E5KR5, E5KR5RE, E5KR6, E5KR7, E5KR8, E5KR8RE, E5KR9, E5KS0, E5KS0RE, E5KS1, E5KS1RE, E5KS2, E5KS2RE, E5KS3, E5KS3RE, E5KS4, E5KS5, E5KS5RE, E5KS6, E5KS6MS, E5KS6MSD, VBLKS1, VBLKS2, VHBLKS1
1,4-Dioxane

The following volatile samples are associated with an initial calibration and CCVs in which a DMC did not meet relative response factor (RRF) criteria. Detected and non-detected compounds are not qualified.

E5KR4, E5KR4RE, E5KR5, E5KR5RE, E5KR6, E5KR7, E5KR8, E5KR8RE, E5KR9, E5KS0, E5KS0RE, E5KS1, E5KS1RE, E5KS2, E5KS2RE, E5KS3, E5KS3RE, E5KS4, E5KS5, E5KS5RE, E5KS6, E5KS6MS, E5KS6MSD, VBLKS1, VBLKS2, VHBLKS1
1,4-Dioxane-d_8

The following semivolatile samples are associated with an opening CCV percent difference (%D) outside criteria. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E5KR7, E5KR7DL, E5KR8, E5KS0, E5KS2, E5KS5, E5KS5DL
Phenol, Pyrene

E5KS6MSD
Pyrene

The following semivolatile samples are associated with an opening CCV in which a surrogate/DMC exceeded percent difference (%D) criteria. Detected and non-detected compounds are not qualified.

E5KR7, E5KR7DL, E5KR8, E5KS0, E5KS2, E5KS5, E5KS5DL
Pyrene-d_{10}

4. BLANKS

The following volatile samples have analyte concentrations reported less than the CRQL. The associated method blank concentration is less than the concentration criteria. Detected compounds are qualified "U". Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL. Ultimately, the compounds are qualified "R" for internal standard criteria.

1,2,3-Trichlorobenze
E5KR4, E5KR4RE

1,2,4-Trichlorobenzene
E5KR4RE

The following volatile samples have TIC concentrations reported less than 5x the associated storage blank concentration. Detected compounds are qualified "U" and deleted from the TIC report.

Unknown Deuterated Trichloroethene @ 9.02
E5KS1, E5KS4

The following semivolatile samples have common contaminant concentrations reported less than 5x the CRQL. The associated method blank concentration is less than 5x the concentration criteria. Detected compounds are qualified "U". Non-detected compounds are not qualified. Reported sample concentrations have been elevated to 5x the CRQL.

bis(2-Ethylhexyl)phthalate
E5KR4, E5KR5, E5KR6, E5KS6, E5KS6MS, E5KS6MSD

The following semivolatile samples have analyte concentrations reported less than the CRQL. The associated method blank concentration is less than the concentration criteria. Detected compounds are qualified "U". Non-detected compounds are not qualified. Reported sample concentrations have been elevated to the CRQL. Ultimately, Benzaldehyde is qualified "UJ" in samples E5KR7, E5KR8, E5KS0, and E5KS5 for surrogate criteria.

Benzaldehyde
E5KR7, E5KR8, E5KR9, E5KS0, E5KS3, E5KS5

The following semivolatile samples have TIC concentrations reported less than 5x the associated method blank concentration. Detected compounds are qualified "U" and deleted from the TIC report. See section 12 for more information on TIC names.

Unknown @ 4.34
E5KR4, E5KR5, E5KR6, E5KS6

Unknown @ 6.79

Unknown @ 23.67
E5KR4, E5KR5, E5KR6, E5KR8, E5KR9, E5KS0, E5KS1, E5KS2, E5KS3, E5KS4, E5KS5, E5KS5DL, E5KS6

5. DEUTERATED MONITORING COMPOUND AND SURROGATE RECOVERY

The following volatile samples have DMC/SMC recoveries above the upper limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are not qualified. Ultimately, some non-detected compounds in samples E5KR5, E5KR5RE, E5KR8, E5KS0, E5KS0RE, E5KS2, E5KS5RE, and E5KS6MSD are qualified "R" for internal standard criteria.

E5KR4
Dichlorodifluoromethane, Chloromethane, Vinyl chloride, Bromomethane, Chloroethane, Carbon disulfide, Cyclohexane, Benzene, Methylcyclohexane, 1,2-Dichloropropane, Bromodichloromethane

E5KR4RE, E5KS1RE, E5KS6
Benzene

E5KR5
Vinyl chloride, Acetone, 2-Butanone, Cyclohexane, Benzene, Methylcyclohexane, 1,2-Dichloropropane, Bromodichloromethane, 4-Methyl-2-pentanone, 2-Hexanone

E5KR5RE
Dichlorodifluoromethane, Chloromethane, Vinyl chloride, Bromomethane, Chloroethane, Acetone, Carbon disulfide, 2-Butanone, Cyclohexane, Benzene, Trichloroethene, Methylcyclohexane, 1,2-Dichloropropane, Bromodichloromethane, 4-Methyl-2-pentanone, Toluene, Tetrachloroethene, 2-Hexanone, Ethylbenzene, o-Xylene, m,p-Xylene, Styrene, Isopropylbenzene

E5KR8
Vinyl chloride, Cyclohexane, Benzene, Trichloroethene, Methylcyclohexane, 1,2-Dichloropropane, Bromodichloromethane, Toluene, Tetrachloroethene, Ethylbenzene, o-Xylene, m,p-Xylene, Styrene, Isopropylbenzene

E5KR8RE, E5KS1, E5KS3, E5KS3RE, E5KS5, E5KS6MS
Cyclohexane, Benzene, Methylcyclohexane, 1,2-Dichloropropane, Bromodichloromethane

E5KS0
Dichlorodifluoromethane, Chloromethane, Vinyl chloride, Bromomethane, Chloroethane, Carbon disulfide, Cyclohexane, Benzene, Trichloroethene, Methylcyclohexane, 1,2-Dichloropropane, Bromodichloromethane, cis-1,3-Dichloropropene, Toluene, trans-1,3-Dichloropropene, 1,1,2-Trichloroethane, Tetrachloroethene, Ethylbenzene, o-Xylene, m,p-Xylene, Styrene, Isopropylbenzene

E5KS0RE, E5KS5RE, E5KS6MSD
Dichlorodifluoromethane, Chloromethane, Vinyl chloride, Bromomethane, Chloroethane, Carbon disulfide, Cyclohexane, Benzene, Trichloroethene, Methylcyclohexane, 1,2-Dichloropropane, Bromodichloromethane, Toluene, Tetrachloroethene, Ethylbenzene, o-Xylene, m,p-Xylene, Styrene, Isopropylbenzene

E5KS2
Dichlorodifluoromethane, Chloromethane, Vinyl chloride, Bromomethane, Chloroethane, Carbon disulfide, Cyclohexane, Benzene, Trichloroethene, Methylcyclohexane, 1,2-Dichloropropane, Bromodichloromethane, cis-1,3-Dichloropropene, 4-Methyl-2-pentanone, Toluene, trans-1,3-Dichloropropene, 1,1,2-Trichloroethane, Tetrachloroethene, 2-Hexanone, Ethylbenzene, o-Xylene, m,p-Xylene, Styrene, Isopropylbenzene

The following volatile samples have one or more DMC/SMC recovery values less than the primary lower limit but greater than or equal to the expanded lower limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E5KS1
cis-1,3-Dichloropropene, trans-1,3-Dichloropropene, 1,1,2-Trichloroethane

The following semivolatile samples have deuterated monitoring compound recovery above the upper limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are not qualified. Ultimately, non-detected Phenol in E5KR8, E5KS0, and E5KS5 is qualified "UJ" for calibration criteria.

E5KR7, E5KR8, E5KS0, E5KS5
Benzaldehyde, Phenol

The following semivolatile samples have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected compounds are qualified "J". Non-detected compounds are qualified "UJ".

E5KR5, E5KR7, E5KS0, E5KS2, E5KS5, E5KS6MS, E5KS6MSD
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

E5KS1, E5KS3
4-Chloroaniline, Hexachlorocyclopentadiene, Fluoranthene, Pyrene, 3,3'-Dichlorobenzidine, Benzo(a)anthracene, Chrysene

The following diluted semivolatile samples have deuterated monitoring compound recovery below the lower limit of the criteria window. Detected and non-detected compounds are not qualified. Ultimately, detected Pyrene is qualified "J" for calibration criteria.

E5KR7DL, E5KS5DL
Fluoranthene, Pyrene, Benzo(a)anthracene, Chrysene

The following diluted aroclor samples with dilution factors greater than 5 have surrogate percent recoveries which exceed 150% but are less than or equal to 200%. Detected and non-detected compounds are not qualified.

E5KR7DL
Decachlorobiphenyl

6A. MATRIX SPIKE/MATRIX SPIKE DUPLICATE

Sample E5KS6 was designated by the samplers to be used for laboratory QC, i.e. MS / MSD analyses.

The following volatile matrix spike/matrix spike duplicate samples have percent recovery greater than the upper acceptance limit. The compound was not detected in the unspiked sample, E5KS6. Non-detected compounds in the unspiked sample, E5KS6, are not qualified for this criterion.

E5KS6MS
Trichloroethene, Benzene

The relative percent difference (RPD) between the following volatile matrix spike and matrix spike duplicate recoveries is outside criteria. Detected Toluene in the unspiked sample, E5KS6, is qualified "J". Non-detected compounds in the unspiked sample, E5KS6, are qualified "UJ".

E5KS6MS, E5KS6MSD
1,1-Dichloroethene, Benzene, Trichloroethene, Toluene, Chlorobenzene

The following volatile matrix spike/matrix spike duplicate samples have percent recovery greater than or equal to the expanded lower acceptance limit but less than the primary lower acceptance limit. The compound was not detected in the unspiked sample, E5KS6. Non-detected compounds in the unspiked sample, E5KS6, are qualified "UJ".

E5KS6MS
Chlorobenzene

The pesticide Form III – MS/MSD Summary was re-calculated using the lowest obtained value for each compound. The RPDs were re-calculated using these values.

	Spike (ug/Kg)	Source (ug/Kg)	MS (ug/Kg)	MS (%R)	MSD (ug/Kg)	MSD (%R)	RPD	%R QC	RPD QC
gamma-BHC (Lindane)	19	0.0	11	58	12	63	8.7	46-127	0-50
Heptachlor	19	0.0	11	58	12	63	8.7	35-130	0-31
Aldrin	19	0.0	12	63	12	63	8.7	34-132	0-43
Dieldrin	39	0.0	26	67	27	69	0.0	31-134	0-38
Endrin	39	0.0	29	74	28	72	3.5	42-139	0-45
4,4'-DDT	39	9.2	31	56	32	58	4.5	23-134	0-50

6B. LABORATORY CONTROL SAMPLE

No problems were found.

7. FIELD BLANK AND FIELD DUPLICATE

No samples were identified as trip blanks, field blanks, or field duplicates. Results are not qualified based upon the results of the field duplicates.

8. INTERNAL STANDARDS

The following volatile samples have internal standard area counts that are outside the lower limit of primary criteria. Detected compounds are qualified "J". Non-detected compounds are qualified "R".

E5KR5, E5KR5RE, E5KR8, E5KS0, E5KS0RE, E5KS2, E5KS5RE, E5KS6MSD
1,1,1-Trichloroethane, Cyclohexane, Carbon tetrachloride, Benzene, Trichloroethene, Methylcyclohexane, 1,2-Dichloropropane, Bromodichloromethane, cis-1,3-Dichloropropene, 4-Methyl-2-pentanone, Toluene, trans-1,3-Dichloropropene, 1,1,2-Trichloroethane, Tetrachloroethene, 2-Hexanone, Dibromochloromethane, 1,2-Dibromoethane, Chlorobenzene, Ethylbenzene, o-Xylene, m,p-Xylene, Styrene, Bromoform, Isopropylbenzene, 1,1,2,2-Tetrachloroethane, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, 1,2-Dichlorobenzene, 1,2-Dibromo-3-chloropropane, 1,2,4-Trichlorobenzene, 1,2,3-Trichlorobenzene

E5KR4, E5KR4RE, E5KR8RE, E5KS1, E5KS1RE, E5KS2RE, E5KS3, E5KS3RE, E5KS5, E5KS6, E5KS6MS
Bromoform, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, 1,2-Dichlorobenzene, 1,2-Dibromo-3-chloropropane, 1,2,4-Trichlorobenzene, 1,2,3-Trichlorobenzene

9. COMPOUND IDENTIFICATION

After reviewing the mass spectra and chromatograms it appears that all VOA, SVOA, pesticide, and Aroclor compounds were properly identified.

10. COMPOUND QUANTITATION AND REPORTED DETECTION LIMITS

The following volatile samples have compound concentrations above the MDL and less than the CRQL. Detected compounds are qualified "J".

E5KR4
Acetone, Methylene chloride, Toluene

E5KR4RE, E5KS0RE, E5KS2, E5KS4, E5KS5, E5KS6
Toluene

E5KR5
Acetone, Carbon disulfide, Chloroform, Toluene

E5KR5RE
Carbon disulfide, Chloroform, Toluene

E5KR7
Carbon disulfide, Benzene, Methylcyclohexane, Toluene, Ethylbenzene, Isopropylbenzene

E5KR8
Acetone, Toluene

E5KR8RE
Toluene, Tetrachloroethene

E5KR9
trans-1,2-Dichloroethene, 2-Butanone, Chloroform, Toluene, Tetrachloroethene, m,p-Xylene

E5KS0
Methylene chloride, Toluene, Tetrachloroethene

E5KS1
Carbon disulfide, Methylene chloride, Chloroform, Cyclohexane, Benzene, 1,2-Dichloropropane, Toluene, Ethylbenzene, o-Xylene, m,p-Xylene

E5KS1RE
Chloroform, 1,2-Dichlorpopane, Toluene, o-Xylene, m,p-Xylene

E5KS2RE
Chloroform, Toluene

E5KS3
Carbon disulfide, Methylene chloride, Cyclohexane, Benzene, Methylcyclohexane, Toluene, o-Xylene, m,p-Xylene, 1,4-Dichlorobenzene

E5KS3RE
Methylene chloride, 1,1-Dichloroethane, Cyclohexane, Benzene, Trichloroethene, Methylcyclohexane, Toluene, m,p-Xylene, 1,4-Dichlorobenzene

E5KS5RE
Toluene, Tetrachloroethene, m,p-Xylene

E5KS6MS, E5KS6MSD
Acetone

VBLKS1, VBLKS2
1,2,4-Trichlorobenzene, 1,2,3-Trichlorobenzene

A library search indicates a match at or above 85% for a TIC compound in the volatile samples. Detected compounds are qualified "NJ".

The following pesticide samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J".

E5KR5
delta-BHC

E5KR6
Endosulfan sulfate, gamma-Chlordane

E5KR7
alpha-BHC, beta-BHC, Heptachlor

E5KR7DL
Heptachlor epoxide, Dieldrin, Endrin, Endosulfan II

E5KR8
beta-BHC, gamma-BHC (Lindane), Heptachlor, Methoxychlor, Endrin ketone

E5KR8DL
Endrin, Endosulfan II

E5KR9, E5KS3
4,4'-DDT, Endrin ketone

E5KS0
delta-BHC, Heptachlor epoxide, 4,4'-DDE, Endrin

E5KS1
Heptachlor

E5KS2
Heptachlor epoxide, Dieldrin, 4,4'-DDE

E5KS4
Dieldrin, 4,4'-DDE, Endosulfan II, 4,4'-DDT, alpha-Chlordane

E5KS5
beta-BHC, gamma-BHC (Lindane), Methoxychlor

E5KS5DL
Endosulfan II

E5KS6
Heptachlor epoxide, 4,4'-DDE, Endosulfan II

E5KS6MS, E5KS6MSD
4,4'-DDE, Endrin ketone

PLCSS1
gamma-BHC (Lindane), Heptachlor epoxide, Dieldrin, 4,4'-DDE, Endrin, Endosulfan sulfate, gamma-Chlordane

PLCSS2
gamma-BHC (Lindane), Heptachlor epoxide, Dieldrin, 4,4'-DDE, Endosulfan sulfate, gamma-Chlordane

The relative percent difference between analyte results for the following pesticide samples is greater than 25%. The sample result is less than 25% of the CRQL. Detected compounds are qualified "U" as false positives. Reported sample concentrations have been elevated to the CRQL.

E5KR4
delta-BHC, Aldrin, Heptachlor epoxide, 4,4'-DDD, 4,4'-DDT, Methoxychlor, gamma-Chlordane

E5KR5
Heptachlor epoxide, 4,4'-DDD, Endrin ketone

E5KR6
delta-BHC, Heptachlor epoxide, Dieldrin, 4,4'-DDD, Methoxychlor

E5KR7DL
Endrin aldehyde

E5KR8
Endosulfan sulfate

E5KR8DL
beta-BHC, Endrin ketone

E5KR9
delta-BHC, Heptachlor epoxide, 4,4'-DDE, Methoxychlor

E5KS0
beta-BHC, Aldrin, Endosulfan I, Endosulfan II, Endrin aldehyde

E5KS1
alpha-BHC, delta-BHC

E5KS2
delta-BHC, Endosulfan II, 4,4'-DDD, Endrin aldehyde

E5KS3
alpha-BHC, beta-BHC, delta-BHC, Heptachlor, Heptachlor epoxide, 4,4'-DDE, 4,4'-DDD, Endrin aldehyde

E5KS4
delta-BHC, Heptachlor epoxide, 4,4'-DDD, Endrin ketone

E5KS5
alpha-BHC, Endosulfan sulfate

E5KS5DL
Endrin ketone

E5KS6
delta-BHC, gamma-BHC (Lindane), Endosulfan I, Dieldrin, Endrin

E5KS6MS
delta-BHC, Heptachlor epoxide, Endosulfan I, Endosulfan II, Endrin aldehyde

E5KS6MSD
delta-BHC, Heptachlor epoxide, Endosulfan I, Endosulfan II

PBLKS1
delta-BHC, Endosulfan I, Endrin ketone

PBLKS2
delta-BHC, Endrin ketone

PLCSS1
delta-BHC, Heptachlor, Aldrin, 4,4'-DDT, Endrin ketone

The relative percent difference between analyte results for the following pesticide samples is greater than 25%. Detected compounds are qualified "J".

E5KR6
Endosulfan sulfate

E5KR7
beta-BHC, Heptachlor, Heptachlor epoxide, Dieldrin, 4,4'-DDE, Endrin, Endosulfan II, 4,4'-DDT

E5KR7DL
Heptachlor epoxide, Dieldrin, Endrin, Endosulfan II, 4,4'-DDD, 4,4'-DDT

E5KR8
beta-BHC, Heptachlor, Heptachlor epoxide, Dieldrin, Endrin, Endosulfan II, Methoxychlor, Endrin ketone, alpha-Chlordane, gamma-Chlordane

E5KR8DL
Heptachlor epoxide, Dieldrin, Endrin, Endosulfan II, 4,4'-DDT, alpha-Chlordane, gamma-Chlordane

E5KR9
4,4'-DDT

E5KS0
delta-BHC, Heptachlor epoxide, 4,4'-DDE, 4,4'-DDT, alpha-Chlordane

E5KS1
Heptachlor, Heptachlor epoxide, Dieldrin, Endrin, Endosulfan II, 4,4'-DDD, 4,4'-DDT, alpha-Chlordane

E5KS2
Heptachlor epoxide, Dieldrin, 4,4'-DDE, 4,4'-DDT

E5KS5
beta-BHC, Heptachlor epoxide, Dieldrin, Endrin, Endosulfan II, Methoxychlor, Endrin ketone, alpha-Chlordane, gamma-Chlordane

E5KS5DL
Heptachlor epoxide, Dieldrin, Endrin, Endosulfan II, 4,4'-DDT, Endrin aldehyde, alpha-Chlordane, gamma-Chlordane

E5KS6
Heptachlor epoxide, 4,4'-DDE, Endosulfan II

E5KS6MS, E5KS6MSD
4,4'-DDE

PLCSS1, PLCSS2
Dieldrin

The following Aroclor samples have analyte concentrations below the quantitation limit (CRQL). Detected compounds are qualified "J".

ALCSS1
Aroclor-1016, Aroclor-1260

ALCSS2
Aroclor-1260

The relative percent difference between analyte results for the following Aroclor samples is greater than 25%. Detected compounds are qualified "J".

E5KR7, E5KS1, E5KS2
Aroclor-1254

E5KR8, E5KS5
Aroclor-1254, Aroclor-1260

E5KS5DL, E5KS6MSD
Aroclor-1260

E5KS6MS
Aroclor-1016, Aroclor-1260

11. SYSTEM PERFORMANCE

GC/MS baseline indicated acceptable performance. The GC baseline for the pesticide and Aroclor analyses was acceptable.

12. ADDITIONAL INFORMATION

TICs with no CAS Numbers were not reported in the EXES Sample Summary Report for the volatile and semivolatile fractions. Please refer to Word document "41647 SDG E5KR4 TIC Report" for the validated TIC results.

TICs with CAS Numbers were not reported in the EXES Sample Summary Report for the volatile fraction. Please refer to Word document "41647 SDG E5KR4 TIC Report" for the validated TIC results.

TICs with CAS Numbers were not reported in the EXES Sample Summary Report for the semivolatile method blank (SBLK03). Please refer to Word document "41647 SDG E5KR4 TIC Report" for the validated TIC results.

The following semivolatile samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". The results from the diluted analyses should be considered the final concentrations for the affected compounds.

E5KR7
Phenanthrene, Fluoranthene

E5KS5
bis(2-Ethylhexyl)phthalate

The following semivolatile samples have an Unknown TIC identified in the method blank at the same retention time as Unknown TICs in the samples but are identified as different compounds. A comparison of the chromatograms demonstrated that the same compound was present in the respective samples. Copies of the chromatograms are included with the validation report. See section 4 for blank qualifications.

Unknown @ 4.38

Unknown 1-Pentanamine
E5KR4

Unknown 3-Hydroxy-2-butanone, acetate
E5KR5, E5KR6

Unknown DL-3-Methyl-2-butanol, acetate
E5KS6

Unknown Acetic acid, 1-methylethyl ester
SBLK03

Unknown @ 6.79

Unknown Benzene, 1-chloro-4-methoxy-2-methyl-
E5KR4

Unkonwn Pyrazole-3-carobxamide, 4-nitro-
E5KR5

Unknown 6-Isopropylquinoline
SBLK03

Unknown @ 18.62

Unknown Dithianone
E5KR4, E5KS3, E5KS5

Unknown Phthalic anhydride
E5KR5, E5KR8, E5KS2, E5KS5DL

Unknown Benzo(c)thiophen-1(3H)-one, 3-(3-oxobenz...
E5KR6

Unknown Estra-1,3,5(10), 9(11)-tetraen-17-one, 3-
E5KR7

Unknown Ninhydrin
E5KR9

Unknown 2,6-Diphthalimidopyridine
E5KS1

Unknown 1H-Isoindole-1,3(2H)-dione, 2-(2-propyny...
E5KS4

Unknown Phthalic acid, monoethyl ester
SBLK03

1,2-Benzenedicarboxylic acid
SBLK32

Unknown @ 23.67

Unknown Phthalic anhydride
E5KR4, E5KR5, E5KR6, E5KS1, E5KS4, E5KS5, E5KS6

Unknown Silane, dimethylpentyloxyheptadecyloxy-
E5KR8

Unknown (2.2)Paracyclophane
E5KS0, SBLK03

Unknown 1H-Isoindole-1,3(H)-dione, 2-(2-propyny...
E5KS2

Unknown b-Homomorphinan-7-one,5,6,8,14-tetradehy...
E5KS5DL

Unknown Phthalic acid, monoethyl ester
SBLK32

The following pesticide samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". The results from the diluted analyses should be considered the final concentrations for the affected compounds.

E5KR7
4,4'-DDE, 4,4'-DDT

E5KR8, E5KS5
Dieldrin, 4,4'-DDE, 4,4'-DDT, alpha-Chlordane, gamma-Chlordane

The following pesticide samples were not included in the sample summary or superset. Form Is are included with the hard copy data package.

PLCSS1, PLCSS2

The following Aroclor samples have compound concentrations which exceed the instruments calibration range. The detected results are qualified "J". The results from the diluted analyses should be considered the final concentrations for the affected compounds.

E5KR7, E5KR8, E5KS1
Aroclor-1254

E5KS5
Aroclor-1254, Aroclor-1260

Case Number: 41647
Site Name: Clyde Dump (OH)

SDG Number: E5KR4
Laboratory: ALS Laboratory

The following aroclor samples were not included in the sample summary or superset. Form Is are included with the hard copy data package.

ALCSS1, ALCSS2

CADRE Data Qualifier Sheet

Qualifiers	Data Qualifier Definitions
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The analyte was positively identified; the associated numerical value is an approximate concentration of the analyte in the sample.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the action limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification.
NJ	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a tentative identification and the associated numerical value represents its approximate concentration.
R	The data are unusable. (The compound may or may not be present.)

General SDG Information: Samples were analyzed according to USEPA CLP Statement of Work SOM01.2. There were no modifications except as listed below.

Instrumentation: Hewlett Packard 5972-S GC/MSD with electron impact ionization and quadrupole detector scanning a mass range of 35 to 300 amu. Column: J&W Scientific DB 624 (75 m, 0.53 mm id, 3 µm film). Purge & Trap: OI Analytical Eclipse 4660 Concentrator (#10 trap) with Varian Archon Autosampler. Carrier and Purge Gas: Helium. Purge Flow: ~35 mL/min. at ambient. Temperature Program: 45°C (3.5 min.) 10°/min. to 220° (2.0 min.).

Sample Preparation: This method has no extraction procedure for the low level soil matrix. Soil samples were received in sample cartridges, were extruded, and frozen until analysis. Prior to analysis a total of 10 mL of reagent water containing internal standard/DMC solution was added and the sample was purged.

Instrument Calibration: The GC/MS was hardware tuned to meet the criteria for a 50 ng purging of 4-bromofluorobenzene as specified in the SOW. This tune is valid for 12 hours.

Initial Calibration and Calibration Verification: The five point initial calibration curve met the specified criteria in the SOW with the exception of the dioxane compounds. All calibration

verification standards met method specified criteria (again excepting dioxanes). Due to interfering ions, the secondary 55 ion was used in quantifying methylcyclohexane for some instrumentation. Any manual integration is noted by an "m" footnote on the quantitation report and a graphics page was included to show peak integration. Analytes which required a manual integration are summarized:

Sample	Initial Scan	Final Scan	Analyte

Blank Analysis: Method blanks were prepared using Ottawa Sand and reagent water spiked with internal standard/DMC solution. All blanks were free of volatile organic contaminants within the specifications of the method.

Sample Analysis: All deuterated monitoring compounds and internal standard area responses were within the required acceptance criteria unless otherwise noted on forms II and VIII. All samples were analyzed within ten days of verified sample receipt.

MS/MSD Analysis: MS/MSD analyses were performed for sample 1122263004 (E5KS6).

Sample Calculations: All symbols are defined in section 8.3 of DCL SOP OV-EP-SOM and section 11.2 of SOM01.2. RRF = $(A_xC_{is})/(A_{is}C_x)$; Water Concentration = $(A_xI_sDF)/(V_oA_{is}\underline{RRF})$; Soil Conc.= $(A_xI_sDF)/(DW_sA_{is}\underline{RRF})$; Medium Level Conc. = $(A_xI_sAV_tDF)/(A_{is}\underline{RRF}V_aW_sD)$.

Miscellaneous Comments: As per the SOW, alkanes were not reported separately but rather were reported as "total alkanes." With regard to the naming of tentatively identified compounds (TICs), spectral matches above 85 percent are reported as a specific isomer unless the analyst has reason to assign a different name. Reasons include but are not limited to previous experience with the compound or an instance where the retention time clearly indicates that a computer generated match is in fact not the compound in question. A specific compound name may be assigned to more than one peak. In any case, TIC naming is tentative and it cannot be assumed that reported compounds and specific isomers are correct.

Multiple samples contain a peak which has been tentatively identified as deuterated trichloroethene. It is believed that an unknown compound or solvent present in the sample vials is causing 1,1,2,2-tetrachloroethane-d2 to break down and form trichloroethene-d either by acting as a catalyst or through chemical reaction.

I certify that this sample data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy sample data package and in the electronic data deliverable has been authorized by the laboratory manager or the manager's designee, as verified by the following signature.

SDG Narrative
Semivolatiles Fraction

Contract: EP-W-11-037
Case: 41647
SDG: E5KR4
Laboratory Name: DataChem Laboratories
DCL Set ID.: 1122263, 1122354.
Sample No.: E5KR4, E5KR5, E5KR6, E5KR7, E5KR7DL, E5KR8, E5KR9, E5KS0, E5KS1, E5KS2, E5KS3, E5KS4, E5KS5, E5KS5DL, E5KS6, E5KS6MS, E5KS6MSD.
General SDG Information: Samples were analyzed according to USEPA CLP Statement of Work SOM01.2. There are no deviations from the SOW. All samples listed above are billable.

Instrumentation: Agilent GC/MS system (ID 5975-H)
Column: J&W Scientific DB-5ms column, 95% dimethyl-(5%)-diphenylsiloxane, nonpolar 30 m x 0.32 mm I.D. with a 0.50 µm film thickness

Sample Preparation: Samples were prepared as stated in the SOW.

Instrument Calibration: (i.e.DFTPP tunes) All tunes met ion intensity ratio requirements. All samples and standards were analyzed within the twelve hour CCV period.

Initial and Continuing Calibration Verification: All initial and continuing calibration standards met minimum response factor, RSD and %D criteria.

Blank Analysis: The extraction blanks met method criteria.

Sample Analysis: All samples passed internal standard area and DMC recovery QC criteria.

MS/MSD Analysis: An MS/MSD analysis was performed on sample E5KS6.

Dilutions: Sample E5KR7 required a 1:10 dilution, while a 1:5 dilution was required on sample E5KS5.

Miscellaneous Comments: Manual edits were made in the calibration standards for a variety of miscalled peaks. Every manual integration is noted by an "m" footnote on the quantitation report, and an additional graphics page is included for each manual integration to show how the peak was integrated. In order to satisfy the requirements of Exhibit B Section 2.5.1 which asks for a listing of each instance of manual integration, these manual integrations are also listed in the table below. The explanation for each of these manual integrations is that the data system did not correctly integrate the peak in its automated data evaluation procedure. More specifically, some of the more common mis-integrated peaks are described as follows: Indeno(1,2,3-c,d)pyrene elutes near dibenz(a,h)anthracene, and a hump from the

276 ion in dibenz(a,h)anthracene sometimes needs to be manually excluded from Indeno(1,2,3-c,d)pyrene. Isomers such as anthracene and benzo(a)anthracene are often called as the similar and near-eluting phenanthrene or chrysene peak. Benzo(b) and Benzo(k)fluoranthene elute very closely to each other without baseline resolution between the two peaks. The automated peak finding routine quite often integrates both peaks as if they were one, and it is necessary to manually separate the isomers. 4-chloroaniline sometimes has the baseline drawn too high when the computer gets confused because of a near-eluting peak causing it to think the valley between peaks is actually the baseline. Bis(2-chloroethyl)ether sometimes needs to be manually separated from the near-eluting aniline. Caprolactam has a tail, especially at higher concentrations, that is often truncated, leaving the need to manually include the tail. Some phenolics and carbazole sometimes have the need to manually include the tailing. Acetophenone sometimes needs to be manually separated from a near-eluting 3-carbon alklyated benzene TIC peak. Benzo(ghi)perylene and dibenz(a,h)anthracene will sometimes be sliced in half by the automatic integration routine and a manual integration would be needed to include the entire peak. Perylene-d12 in the SIM analysis often needs to be manually separated from the baseline arising from benzo(a)pyrene-d12, a near-eluting and considerably larger isomer peak. Sometimes the automatic peak finding routine will simply miss a peak, making it necessary to manually include it. This was the case with all analytes not mentioned above.

With regard to the naming of tentatively-identified compounds (TICs), spectral matches above 85 percent are reported as a specific isomer unless the analyst has a specific reason to assign a different name. Reasons for assigning a TIC name other than the match with the highest fit value above 85% include instances in which the analyst has previous experience with respect to a specific compound. When the first computer-generated match is a target compound and retention time information clearly indicates the TIC is in fact not the target compound, the analyst reserves the right to give a more appropriate tentative identification. This was the case for the following TICs: retention time 17.87 minutes in sample E5KR7, 17.83 in sample E5KS0 and 17.47 in sample E5KS2. There may be instances in which a specific compound name is assigned to more than one peak. Even though specific names will usually be given to TICs with spectral fits above 85%, it must be understood by the data user that TIC names are very tentative, and it cannot be assumed that the specific isomers reported are correct. One case where

specific names are not given to spectral matches above 85% is for alkanes, because the SOW requires alkanes to be reported as either straight-chain, branched or cyclic and summarized as "total alkanes."

Results on the raw data are expressed in units of ug/mL (micrograms per milliliter of the solution that was injected onto the GC/MS system). Final results are calculated by the following equations:

Water:

$$\text{Concentration } \mu g/L = \frac{(A_x)\ (I_s)\ (V_t)\ (DF)\ (GPC)}{(A_{is})\ (\overline{RRF})\ (V_o)\ (V_i)}$$

Soil:

$$\text{Concentration } \mu g/Kg \text{ (Dry weight basis)} = \frac{(A_x)\ (I_s)\ (V_t)\ (DF)\ (GPC)}{(A_{is})\ (\overline{RRF})\ (V_i)\ (W_s)\ (D)}$$

where all variables are as defined in Exhibit D/SVOA Sections 11.2.1.6 and 9.3.4.1.

I certify that this Sample Data Package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy Sample Data Package and in the electronic data deliverable has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

SDG Narrative
Pesticides

Laboratory Name: DataChem Laboratories
Case: 41647
SDG: E5KR4
EPA Sample Numbers: E5KR4, E5KR5, E5KR6, E5KR7, E5KR7DL, E5KR8, E5KR8DL, E5KR9, E5KS0, E5KS1, E5KS2, E5KS3, E5KS4, E5KS5, E5KS5DL, E5KS6, E5KS6MS, and E5KS6MSD.
Contract Number: EP-W-11-037

General SDG Information: Samples were analyzed according to USEPA CLP Statement of Work SOM01.2. All above samples are billable.

Instrumentation: Hewlett Packard 5890 GC/ECD
Column: 0.32m ID X 30M RTX-CLP 0.50 micron film (primary).
0.32m ID X 30M RTX-CLP2 0.25 micron film (confirmation).

Sample Preparation: All samples were extracted within sample preparation hold times.

Initial Calibration: All requirements for initial calibration were met.

Continuing Calibration: All requirements for continuing calibration were met.

Sample Analysis: All samples were analyzed within SOW specified hold times.

Dilutions: Samples E5KR7, E5KR8, and E5KS5 required dilutions.

Blank Analysis: No analytes were detected in the method blank above the CRQLs.

LCS Analysis: All recoveries were within established limits

MS/MSD Analysis: All recoveries and RPDs were within established limits.

Surrogates: All samples passed SOW surrogate criteria.

Miscellaneous Comments: Samples E5KR7DL, E5KR8DL, and E5KS5DL required manual integrations for 4,4'-DDT due to unresolved peaks.

This chart summarizes the amount (ng) of each compound in each type of standard:

SDG Narrative
Aroclors

Laboratory Name: ALS/DataChem
Case: 41647
SDG: E5KR4
EPA Sample Numbers: E5KR4, E5KR5, E5KR6, E5KR7, E5KR7DL, E5KR8, E5KR8DL, E5KR9, E5KS0, E5KS1, E5KS1DL, E5KS2, E5KS3, E5KS4, E5KS5, E5KS5DL, E5KS6, E5KS6MS, and E5KS6MSD.
Contract Number: EP-W-11-037

General SDG Information: Samples were analyzed according to USEPA CLP Statement of Work SOM01.2 all samples listed above are billable.

Instrumentation: Hewlett Packard 5890 GC/ECD
Column: Restek 0.32m ID X 30M RTX-CLP 0.50 micron film (primary).
Restek 0.32m ID X 30M RTX-CLP2 0.25 micron film (confirmation).

Sample Preparation: All samples were extracted within SOW specified hold times.

Initial Calibration: All requirements for initial calibration were met.

Continuing Calibration: CCV passed continuing calibration criteria.

Sample Analysis: All samples were analyzed within SOW specified hold times from date of extraction.

Dilutions: None.

Blank Analysis: No analytes were detected in the method blank above the CRQL.

LCS Analysis: LCS passed established criteria.

MS/MSD Analysis: MS/MSD recoveries within established limits.

Surrogates: All samples passed surrogate criteria.

Miscellaneous Comments: None.

This chart summarizes the amount (ng) of each compound in each type of standard:

Equation for Aroclors in soil samples (EQ. 9):

EQ. 9 Concentration Calculation for Soil Samples

$$\text{Concentration } \mu g/Kg \text{ (Dry weight basis)} = \frac{(A_x)\ (V_t)\ (DF)\ (GPC)}{(\overline{CF})\ (V_i)\ (W_s)\ (D)}$$

Where,

A_x = Area or height of the peak for the compound to be measured.

$\overline{CF}$ = Mean Calibration Factor from the specific five-point calibration (area/ng).

V_t = Volume of the concentrated extract in µL. (If GPC is not performed, then V_t = 10000 µL. If GPC is performed, then $V_t = V_{out}$).

V_i = Volume of extract injected in µL. (If a single injection is made onto two columns, use one half the volume in the syringe as the volume injected onto each column.)

$$D = \frac{100 - \%Moisture}{100}$$

W_s = Weight of sample extracted in g.

DF = Dilution Factor. The DF for analysis of soil/sediment samples by this method is defined as follows:

$$\frac{\text{µL most concentrated extract used to make dilution + µL clean solvent}}{\text{µL most concentrated extract used to make dilution}}$$

If no dilution is performed, DF = 1.0.

Equation for Aroclors in water samples (EQ. 7):

EQ. 7 Concentration Calculation for Water Samples

$$\text{Concentration µg/L} = \frac{(A_x)\,(V_t)\,(DF)\,(GPC)}{(\overline{CF})\,(V_o)\,(V_i)}$$

Where,

A_x = Area or height of the peak for the compound to be measured.

$\overline{CF}$ = Mean Calibration Factor from the specific five-point calibration (area/ng).

V_o = Volume of water extracted in mL (Note: for instrument and sulfur blanks assume a volume of 1000 mL).

V_i = Volume of extract injected in µL. (If a single injection is made onto two columns, use one half the volume in the syringe as the volume injected onto each column).

V_t = Volume of the concentrated extract in µL. (If GPC is not performed, then V_t = 10000 µL. If GPC is performed, then $V_t = V_{out}$).

DF = Dilution Factor. The DF for analysis of water samples by this method is defined as follows:

$$\frac{\text{µL most concentrated extract used to make dilution + µL clean solvent}}{\text{µL most concentrated extract used to make dilution}}$$

If no dilution is performed, DF = 1.0.

$GPC = \frac{V_{in}}{V_{out}}$ = GPC factor. (If no GPC is performed, GPC = 1.0).

V_{in} = Volume of extract loaded onto GPC column.

V_{out} = Volume of extracted collected after GPC cleanup.

I certify that this Sample Data Package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the electronic data deliverable has been authorized by the Laboratory Manager or the Manager's designee, as verified by the following signature.

Subject: Region 05 | Case 41647 | Lab DATAC | Issue Discrepancies with tags, jars, and/or TR/COC | FINAL
Attachments: Case 41647.pdf

Roxy,

Summary Start
Issue: Sample tag numbers were not listed on the TR/COC for the percent moisture containers. The lab received sample tags for the containers as follows:
E5KR7 Tag 5C001313
E5KR8 Tag 5C001320
E5KR9 Tag 5C001327
E5KS0 Tag 5C001334
E5KS1 Tag 5C001341
E5KS2 Tag 5C001348
E5KS3 Tag 5C001355
E5KS4 Tag 5C001362
E5KS5 Tag 5C001369
Resolution: In accordance with previous direction from Region 5, the laboratory will note the issue in the SDG Narrative, and proceed with the analysis of the sample. The Resolution will be applied to all samples received for this Case.
Summary End

Please let me know if you have any additional questions.
Thanks,

Please note: To waive any defect(s) associated with this issue, please contact your PO.

Subject: Organic case 41647

Please advise Region 5, I received one extra tag per sample that is not listed on the TR. All the extra tags are for the Percent Moisture container. They are as follows
E5KR7 Tag 5C001313
E5KR8 Tag 5C001320
E5KR9 Tag 5C001327
E5KS0 Tag 5C001334
E5KS1 Tag 5C001341
E5KS2 Tag 5C001348
E5KS3 Tag 5C001355
E5KS4 Tag 5C001362
E5KS5 Tag 5C001369
I have attached copies of all the tags.
Mere

LEVEL 3 DATA VALIDATION

We have reviewed the data for the following case:

SITE NAME: Clyde Dump (OH)

CASE NUMBER: 41647 **SDG NUMBER:** ME5KR4

Number and Type of Samples: 13 soils

Sample Numbers: ME5KR4-R9, S0-S6

Laboratory: Chemtech **Hrs. for Review:** 11.0

+1 DRC 9-21-11

Following are our findings:

CC: Howard Pham
Region 5 TPO
Mail Code: SA-5J

Below is a summary of the out-of-control audits and the possible effects on the data for this case:

Thirteen (13) soil samples, numbered ME5KR4-R9, S0-S6, were collected on August 9-10, 2011. The lab received the samples on August 11, 2011 in good condition. All samples were analyzed for metals and cyanide. All samples were analyzed using the CLP SOW ISM01.2 analysis procedures.

Mercury analysis was performed using a Cold Vapor AA Technique. Cyanide analysis was performed using the MIDI Distillation procedure. The remaining inorganic analyses were performed using an Inductively Coupled Plasma-Atomic Emission Spectroscopy (ICP-AES) procedure.

No raw data for percent solids was provided. Percent solids data were presented on a computer generated spreadsheet.

The conversion calculation formula provided in the laboratory case narrative does not include unit values for several of the variables or multipliers within the equation. Reported sample results are calculated correctly.

1. HOLDING TIME:

The inorganic soil samples were reviewed for holding time violations using criteria developed for water samples. No defects were found.

2. CALIBRATIONS:

No defects were found for the calibrations.

3. BLANKS:

The following inorganic samples are associated with an ICB/CCB or preparation blank concentration which is greater than the method detection limit (MDL). The sample result is greater than the MDL.

Hits less than the CRQL are qualified "U". The sample result is raised to the CRQL.
Hits greater than the CRQL but less than 5 times the blank are qualified "J+".

Silver

ME5KR5, ME5KR6, ME5KS0, ME5KS1, ME5KS2, ME5KS4, ME5KS6

Sodium

ME5KR4, ME5KR5, ME5KR6, ME5KS0, ME5KS4, ME5KS6

4. MATRIX SPIKE/MATRIX SPIKE DUPLICATE AND LAB CONTROL SAMPLE:

The following inorganic samples are associated with a matrix spike recovery which is low (30-74%) indicating that sample results may be biased low. The required post spike was performed and results were greater than or equal to 75%.

Hits are qualified "J" and non-detects are qualified "UJ".

Antimony

ME5KR4, ME5KR5, ME5KR6, ME5KR7, ME5KR8, ME5KR9, ME5KS0, ME5KS1, ME5KS2, ME5KS3, ME5KS4, ME5KS5, ME5KS6

Beryllium

ME5KR4, ME5KR5, ME5KR6, ME5KR7, ME5KR8, ME5KR9, ME5KS0, ME5KS1, ME5KS2, ME5KS3, ME5KS4, ME5KS5, ME5KS6

Copper

ME5KR4, ME5KR5, ME5KR6, ME5KR7, ME5KR8, ME5KR9, ME5KS0, ME5KS1, ME5KS2, ME5KS3, ME5KS4, ME5KS5, ME5KS6

Lead

ME5KR4, ME5KR5, ME5KR6, ME5KR7, ME5KR8, ME5KR9, ME5KS0, ME5KS1, ME5KS2, ME5KS3, ME5KS4, ME5KS5, ME5KS6

Manganese

ME5KR4, ME5KR5, ME5KR6, ME5KR7, ME5KR8, ME5KR9, ME5KS0, ME5KS1, ME5KS2, ME5KS3, ME5KS4, ME5KS5, ME5KS6

Vanadium

ME5KR4, ME5KR5, ME5KR6, ME5KR7, ME5KR8, ME5KR9, ME5KS0, ME5KS1, ME5KS2, ME5KS3, ME5KS4, ME5KS5, ME5KS6

The following inorganic samples are associated with a matrix spike recovery which is low (30-74%) indicating that sample results may be biased low. The required post spike was performed and results were less than 75%.

Hits are qualified "J-" and non-detects are qualified "UJ".

Chromium

ME5KR4, ME5KR5, ME5KR6, ME5KR7, ME5KR8, ME5KR9, ME5KS0, ME5KS1, ME5KS2, ME5KS3, ME5KS4, ME5KS5, ME5KS6

The following inorganic samples are associated with a matrix spike recovery which is low (30-74%) indicating that sample results may be biased low. No post spike was required.

Hits are qualified "J-" and non-detects are qualified "UJ".

Silver

ME5KR4, ME5KR5, ME5KR6, ME5KR7, ME5KR8, ME5KR9, ME5KS0, ME5KS1, ME5KS2, ME5KS3, ME5KS4, ME5KS5, ME5KS6

No defects were found for the laboratory control sample.

5. LABORATORY AND FIELD DUPLICATE:

Region 5 uses 35%RPD control criteria for soil samples. No problems were found for duplicate RPD.

The following inorganic samples are associated with duplicate results which did not meet absolute difference (AD) primary criteria. Region 5 uses 2xCRQL difference criteria for soil samples.

Hits are qualified "J" and non-detects are qualified "UJ".

Arsenic

ME5KR4, ME5KR5, ME5KR6, ME5KR7, ME5KR8, ME5KR9, ME5KS0, ME5KS1, ME5KS2, ME5KS3, ME5KS4, ME5KS5, ME5KS6

No samples were identified as field duplicates.

6. ICP ANALYSIS:

The following inorganic samples are associated with an ICP serial dilution percent difference which is not in control.

Hits are qualified "J" and non-detects are qualified "UJ".

Chromium
ME5KR4, ME5KR5, ME5KR6, ME5KR7, ME5KR8, ME5KR9, ME5KS0, ME5KS1, ME5KS2, ME5KS3, ME5KS4, ME5KS5, ME5KS6

Nickel
ME5KR4, ME5KR5, ME5KR6, ME5KR7, ME5KR8, ME5KR9, ME5KS0, ME5KS1, ME5KS2, ME5KS3, ME5KS4, ME5KS5, ME5KS6

Potassium
ME5KR4, ME5KR5, ME5KR6, ME5KR7, ME5KR8, ME5KR9, ME5KS0, ME5KS1, ME5KS2, ME5KS3, ME5KS4, ME5KS5, ME5KS6

No defects were found for the ICS samples.

7. SAMPLE RESULTS:

The following inorganic samples have analyte concentrations reported above the method detection limit (MDL) but below the quantitation limit (CRQL).
Results are qualified "J".

Antimony
ME5KR4, ME5KR5, ME5KR6, ME5KS0, ME5KS1, ME5KS2, ME5KS3, ME5KS4, ME5KS6

Beryllium
ME5KS6

Cadmium
ME5KS6

Mercury
ME5KR4, ME5KR5, ME5KR6, ME5KS2, ME5KS3, ME5KS6

Selenium
ME5KR4, ME5KR5, ME5KR6, ME5KR7, ME5KR8, ME5KR9, ME5KS0, ME5KS1, ME5KS2, ME5KS3, ME5KS4, ME5KS5, ME5KS6

Thallium
ME5KR4, ME5KR5, ME5KR7, ME5KR8, ME5KR9, ME5KS2, ME5KS4, ME5KS5

Cyanide
ME5KR7, ME5KR8, ME5KR9, ME5KS5

All data, except those qualified above, are acceptable.

EXES ISM01.2 Data Qualifier Sheet

Qualifiers	Data Qualifier Definitions
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
J	The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting Quality Control (QC) criteria. The analyte may or may not be present in the sample.
UJ	The analyte was analyzed for, but not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

SDG NARRATIVE

USEPA
SDG # ME5KR4
CASE # 41647
CONTRACT # EPW09038
LAB NAME: CHEMTECH CONSULTING GROUP
LAB CODE: CHEM
CHEMTECH PROJECT #C3327

A. Number of Samples and Date of Receipt

13 Soil Samples were delivered to the laboratory intact on 08/11/11.

B. Parameters

Test requested for METALS CLP FULL == Aluminum, Antimony, Arsenic, Barium, Beryllium, Cadmium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Nickel, Potassium, Selenium, Silver, Sodium, Thallium, Vanadium, Zinc & HG & CN.

C. Cooler Temp

Indicator Bottle: **Presence**/Absence
Cooler: 5°C

D. Detail Documentation (related to Sample Handling Shipping, Analytical Problem, Temp of Cooler etc):

E. Corrective Action taken for above:

F. Analytical Techniques:

All analyses were based on CLP Methodology by method ISM01.2.

G. Calculation:

Calculation example for ICP-AES Soil Sample:

Conversion of Results from mg/L or ppm to mg/kg (Dry Weight Basis):

Results reported in Mg/Kg = (Result in mg/L or ppm for ICP-AES) X 1000 X Fraction of % Solid (100/ % Solid) X Dilution Factor (if any) X Fraction of Sample Amount Taken in ICP-Soil Prep.

Example of Fraction of Sample Amount Taken in ICP-AES Soil Prep = 1/10 (1.0 X10 or 0.50 X

20)
(if 1.0 g of sample taken during Digestion and the Final Volume was made to 100 ml or 0.5 g to Final Volume 50ml)

Or

Example of Fraction of Sample Amount Taken in ICP-AES Soil Prep = 1/10.2 (1.02 X 10 or 0.51 X 20)
(if 1.02 g of sample taken during Digestion and the Final Volume was made to 100 ml or 0.51 g to Final Volume 50ml)

Etc.

Calculation example for Hg Soil Sample:

Conversion of Results from ppb to mg/kg (Dry Weight Basis):

Results reported in Mg/Kg = (Result in ppb for Hg) X Fraction of % Solid (100/ % Solid) X Dilution Factor (if any) X Fraction of Sample Amount Taken in Prep.

Example of Fraction of Sample Amount Taken in Hg Soil Prep = 1/ 2 (0.2 X 10)
(if 0.2 g of sample taken during Digestion and the Final Volume was made to 100 ml)

Or

Example of Fraction of Sample Amount Taken in Hg Soil Prep = 1 / 2.1 (0.21 X 10)
(if 0.21 g of sample taken during Digestion and the Final Volume was made to 100 ml)

Etc.

Calculation example for CN Soil Sample:

Conversion of Results from Ug/L to mg/kg (Dry Weight Basis):

Results reported in Mg/Kg = (Result in Ug/L for CN) X Fraction of % Solid (100/ % Solid) X Dilution Factor (if any) X Fraction of Sample Amount Taken in Prep.

Example of Fraction of Sample Amount Taken in CN Soil Prep = 1/20 (1 X 20)
(if 1.0 g of sample taken during Digestion and the Final Volume was made to 50 ml)

Or

Example of Fraction of Sample Amount Taken in Hg Soil Prep = 1 / 20.2 (1.01 X 20)
(if 1.01 g of sample taken during Digestion and the Final Volume was made to 50 ml)

Etc.

CHEMTECH
284 Sheffield Street
Mountainside, NJ 07092

H. QA/ QC

Calibrations met requirements. Interference check met requirements. Blank analyses did not indicate any presence of contamination. Laboratory Control sample was within control limits. Spike sample did meet requirements except for Antimony, Beryllium, Chromium, Copper, Lead, Manganese, Silver and Vanadium. Duplicate sample did meet requirements except for Arsenic, Calcium, Copper, Lead and Manganese. Serial Dilution did meet requirements except for Chromium, Nickel and Potassium.

I certify that the data package is in compliance with the terms and conditions of the contract both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data package has been authorized by the Laboratory Director or his designee, as verified by the following signature.

Signature Mildred V Reyes Name: Mildred V. Reyes

METHOD DETECTION LIMITS (MDL) (ANNUALLY)

Lab Name: Chemtech Consulting Group Contract: EPW09038

Lab Code: CHEM Case No.: 41647 Mod. Ref. No.: _____ SDG No.: ME5KR4

Instrument Type: P Instrument ID: P5 Date: 12/17/2010

Preparation Method: 3050B

Concentration Units (ug/L, mg/kg, or ug): MG/KG

Analyte	Wavelength/Mass	MDL
Aluminum	396.10	0.70
Antimony	206.83	0.16
Arsenic	189.04	0.13
Barium	493.41	0.084
Beryllium	234.80	0.041
Cadmium	214.40	0.0092
Calcium	373.60	1.3
Chromium	267.72	0.11
Cobalt	228.62	0.035
Copper	324.75	0.50
Iron	259.80	0.54
Lead	220.35	0.078
Magnesium	279.08	2.9
Manganese	257.61	0.038
Nickel	231.60	0.077
Potassium	769.80	6.9
Selenium	196.02	0.27
Silver	328.07	0.061
Sodium	818.30	19.8
Thallium	190.86	0.17
Vanadium	292.40	0.030
Zinc	213.80	0.51
