TITLE XIV—NATIONAL AGRICULTURAL RESEARCH, EXTENSION, AND TEACHING POLICY ACT OF 1977

National Agricultural Research, Extension, and Teaching Policy Act of 1977.
7 USC 3101 note

SHORT TITLE

SEC. 1401. This title may be cited as the “National Agricultural Research, Extension, and Teaching Policy Act of 1977”.

Subtitle A—Findings, Purposes, and Definitions

FINDINGS

SEC. 1402. Congress finds that—

(1) the Federal Government of the United States has provided funding support for agricultural research and extension for many years in order to promote and protect the general health and welfare of the people of the United States, and this support has significantly contributed to the development of the Nation's agricultural system;

(2) the agencies conducting such federally supported research were established at different times in response to different and specific needs and their work is not fully coordinated;

(3) these agencies have only been partially successful in responding to the needs of all persons affected by their research, and useful information produced through such federally supported research is not being efficiently transferred to the people of the United States;

(4) expanded agricultural research and extension are needed to meet the rising demand for food and fiber caused by increases in worldwide population and food shortages due to short-term, localized, and adverse climatic conditions;

(5) increased research is necessary to alleviate inadequacies of the marketing system (including storage, transportation, and distribution of agricultural and forest products) which have impaired United States agricultural production and utilization;

7 USC 3101.

(6) advances in food and agricultural sciences and technology have become increasingly limited by the concentration upon the thorough development and exploitation of currently known scientific principles and technological approaches at the expense of more fundamental research, and a strong research effort in the basic sciences is necessary to achieve breakthroughs in knowledge that can support new and innovative food and agricultural technologies;

(7) Federal funding levels for agricultural research and extension in recent years have not been commensurate with needs stemming from changes in United States agricultural practices and the world food and agricultural situation;

(8) new Federal initiatives are needed in the areas of—

(A) research to find alternatives to technologies based on fossil fuels;

(B) research and extension on human nutrition and food consumption patterns in order to improve the health and vitality of the people of the United States;

(C) research to find solutions to environmental problems caused by technological changes in food and agricultural production;

(D) aquacultural research and extension;

(E) research and extension directed toward improving the management and use of the Nation's natural and renewable resources, in order to meet the increased demand for forest products, conserve water resources (through irrigation management, tail water reuse, desalination, crop conversion, and other water conservation techniques), conserve soil resources, and properly manage rangelands;

(F) improving and expanding the research and extension programs in home economics;

(G) extension programs in energy conservation;

(H) extension programs in forestry and natural resources, with special emphasis to be given to improving the productivity of small private woodlands, modernizing wood harvesting and utilization, developing and disseminating reliable multiple-use resource management information to all landowners and consumers, and the general public, wildlife, watershed, and recreational management, and cultural practices (including reforestation, protection, and related matters);

(I) research on climate, drought, and weather modification as factors in food and agricultural production;

(J) more intensive agricultural research and extension programs oriented to the needs of small farmers and their families and the family farm system, which is a vital component of the agricultural production capacity of this country;

(K) research to expand export markets for agricultural commodities;

(L) development and implementation, through research, of more efficient, less wasteful, and environmentally sound methods of producing, processing, marketing, and utilizing food, fiber, waste products, other nonfood agricultural products, and forest and rangeland products;

(M) expanded programs of animal disease and health care research and extension;

(N) research to develop new crops, in order to expand our use of varied soils and increase the choice of nutritional and economically viable crops available for cultivation; and

(O) investigation and analysis of the practicability, desirability, and feasibility of using organic waste materials to improve soil tilth and fertility, and extension programs to disseminate practical information resulting from such investigations and analyses; and

(9) the existing agricultural research system consisting of the Federal Government, the land-grant colleges and universities, other colleges and universities engaged in agricultural research, the agricultural experiment stations, and the private sector constitute an essential national resource which must serve as the foundation for any further strengthening of agricultural research in the United States.

PURPOSES

SEC. 1403. The purposes of this title are to—

7 USC 3102.

(1) establish firmly the Department of Agriculture as the lead agency in the Federal Government for the food and agricultural sciences, and to emphasize that agricultural research, extension, and teaching are distinct missions of the Department of Agriculture;

(2) undertake the special measures set forth in this title to improve the coordination and planning of agricultural research, identify needs and establish priorities for such research, assure that high priority research is given adequate funding, assure that national agricultural research, extension, and teaching objectives are fully achieved, and assure that the results of agricultural research are effectively communicated and demonstrated to farmers, processors, handlers, consumers, and all other users who can benefit therefrom;

(3) increase cooperation and coordination in the performance of agricultural research by Federal departments and agencies, the States, State agricultural experiment stations, colleges and universities, and user groups;

(4) enable the Federal Government, the States, colleges and universities, and others to implement needed agricultural research, extension, and teaching programs, including the initiatives specified in section 1402(8) of this title, through the establishment of new programs and the improvement of existing programs, as provided for in this title;

(5) establish a new program of grants for high-priority agricultural research to be awarded on the basis of competition among scientific research workers and all colleges and universities;

(6) establish a new program of grants for facilities and instrumentation used in agricultural research; and

(7) establish a new program of education grants and fellowships to strengthen training and research programs in the food and agricultural sciences, to be awarded on the basis of competition.

Subtitle D—National Food and Human Nutrition Research and Extension Program

FINDINGS AND DECLARATIONS

SEC. 1421. (a) Congress hereby finds that there is increasing evidence of a relationship between diet and many of the leading causes of death in the United States; that improved nutrition is an integral component of preventive health care; that there is a serious need for research on the chronic effects of diet on degenerative diseases and related disorders; that nutrition and health considerations are important to United States agricultural policy; that there is insufficient knowledge concerning precise human nutritional requirements, the interaction of the various nutritional constituents of food, and differences in nutritional requirements among different population groups such as infants, children, adolescents, elderly men and women, and pregnant women; and that there is a critical need for objective data concerning food safety, the potential of food enrichment, and means to encourage better nutritional practices. 7 USC 3171.

(b) It is hereby declared to be the policy of the United States that the Department of Agriculture conduct research in the fields of human nutrition and the nutritive value of foods and conduct human nutrition education activities, as provided in this subtitle.

Subtitle E—Animal Health and Disease Research

PURPOSE

SEC. 1429. It is the purpose of this subtitle to promote the general welfare through the improved health and productivity of domestic livestock, poultry, aquatic animals, and other income-producing animals which are essential to the Nation's food supply and the welfare of producers and consumers of animal products; to improve the health of horses; to facilitate the effective treatment of, and, where possible, prevent, animal and poultry diseases in both domesticated and wild animals which, if not controlled, would be disastrous to the United States livestock and poultry industries and endanger the Nation's food supply; to minimize livestock and poultry losses due to transportation and handling; to protect human health through control of animal diseases transmissible to humans; to improve methods of controlling the births of predators and other animals; and otherwise to promote the general welfare through expanded programs of research and extension to improve animal health. It is recognized that the total animal health and disease research and extension efforts of the several State colleges and universities and of the Federal Government would be more effective if there were close coordination between such programs, and it is further recognized that colleges and universities having accredited colleges of veterinary medicine or departments of veterinary sciences or animal pathology, and similar units conducting animal health and disease research in the State agricultural experiment stations, are especially vital in training research workers in animal health.

TITLE XVII—WHEAT AND WHEAT FOODS RESEARCH
AND NUTRITION EDUCATION ACT

Wheat and Wheat
Foods Research
and Nutrition
Education Act.

SHORT TITLE

SEC. 1701. This title may be cited as the “Wheat and Wheat Foods Research and Nutrition Education Act”.

7 USC 3401 note.

FINDINGS AND DECLARATION OF POLICY

SEC. 1702. (a) Wheat is basic to the American diet and the American economy. It is grown by thousands of farmers and consumed, in various forms, by millions of people in the United States.

7 USC 3401.

(b) The size of the American wheat crop and how it is marketed and ultimately consumed determines whether many Americans receive adequate nourishment. Wheat has a strong impact on the Nation's well-being. Additional research on the optimal use of wheat products can improve the American diet. Consumer education about the nutritional value and economic use of wheat products can enhance the national welfare.

(c) It has long been recognized that it is in the national interest to have a regular, adequate, and high quality wheat supply. It would be extremely difficult, without an effective coordinated research and nutrition education effort, to accomplish this objective. A programed effort of research and nutrition education is of great importance to wheat producers, processors, end product manufacturers, and consumers.

(d) It is the purpose of this title and in the public interest to authorize and enable the creation of an orderly procedure, adequately financed through an assessment, for the development and initiation of an effective and continuous coordinated program of research and nutrition education, designed to improve and enhance the quality, and make the most efficient use, of American wheat, processed wheat, and wheat end products to ensure an adequate diet for the people of the

United States. The maximum rate of assessment authorized hereunder represents an infinitesimal proportion of the overall cost of manufacturing wheat end products. Therefore, such assessment will not significantly affect the retail prices of those products. Furthermore, any price effect will be more than offset by the increased efficiency in end product manufacture and increased consumer acceptance, due to nutritional improvements in wheat products, which may be expected to follow from adoption of a plan under this title. Nothing in this title shall be construed to provide for control of production or otherwise limit the right of individual wheat producers to produce wheat.
