

## Management

Divot tallow weed blend establishes very quickly with adequate soil moisture and good growing conditions. Tallow weeds commonly form a winter rosette following emergence, and primary forage production occurs from early February through May. Areas planted with tallow weed should be deferred from grazing for a minimum of 30 days after planting to minimize trampling by livestock. Seed stalks typically emerge from March-May and plants may produce seed through June under favorable moisture conditions. Once established, Divot tallow weed blend readily re-seeds itself with moderate soil disturbance prior to the growing season, or significant rainfall.

## Availability

Breeder seed of Divot tallow weed blend is maintained by *South Texas Natives* in conjunction with the Texas Foundation Seed Service. Breeder seed can be obtained by contacting *South Texas Natives*.
