

Plant Collection Information Sheet

Illinois bundleflower, *Desmanthus illinoensis*

Scientific Name: *Desmanthus illinoensis* (Michx.) MacMill. ex B.L. Rob. & Fernald

Common Name: Illinois bundleflower

Morphological Characteristics:

- perennial legume
- height of 1 to 3 feet
- bi-pinnately compound leaves with 6 to 15 pinnae each have 20-30 leaflets
- showy white globe shaped flowers about 1 inch across
- flowers bloom May-October
- seed pods are clustered flat scythe-shaped which are slightly spirally twisted
- coarse, fine, and medium texture soils
- best in full sunlight but will survive under light partial shade
- pH limit 5.0 - 8.0

Conservation Use:

Why collect this plant?

In Louisiana there is a lack of locally-adapted native (ecotypic) plant materials for use in revegetation projects. The **Louisiana Native Plant Initiative (LNPI)** was established to collect, evaluate and release new plant materials for use in Louisiana. The goals of the LNPI are to conserve a vanishing natural resource and provide an essential step in the development of a native plant industry in Louisiana. Commercial growers will then be able to supply plant material for restoration, revegetation, roadside plantings and the ornamental plant industry that are adapted to the state.

Louisiana NRCS in cooperation with LNPI has identified Illinois bundleflower, *Desmanthus illinoensis* as a plant meeting project objectives. Plant and seed collections supporting **LNPI** are targeted for all Louisiana Parishes.

Future ecotype development will benefit the following conservation practice standards: 645 Upland Wildlife Habitat Management; 342 Critical Area Planting; 562 Recreation Area Improvement; 550 Range Planting; 327 Conservation Cover; 643 Restoration and Management of Rare or Declining Habitats; 647 Early Successional Habitat Development/Management; and others.

Your assistance in collecting this plant helps support the NRCS conservation practice standards which are employed daily to conserve the natural resources of Louisiana!

Centers Requesting Seed:

Golden Meadow Plant Materials Center

How to Collect Seed:

1. Identify native plant stands in your area. Use field guides and websites for helpful photos.
2. Determine if seed is mature. Mature seed is typically dry and will easily separate from the seed head.
3. Hand strip mature seed by grasping the bottom of the seed head or pod then gently pulling away from the base of the plant. Deposit seed in a brown paper sack. Collect seed from as many plants as possible.
4. Label each collection as it is made so collections do not get mixed up. Information required includes: Collector's name, number of plants collected, location (parish, city, highway, and GPS coordinates), site description (soil type, slope, and plants growing in association).
5. Complete NRCS-ECS-580; Plant Collection Information Form and mail with collected seeds to the NRCS Plant Materials Center requesting the species.

Galliano, LA 70354

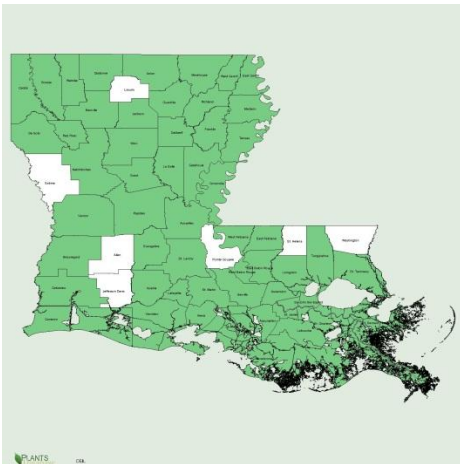

Helpful Tips:

Look for plants that display differences in color, height, or forage abundance and record observations. Differences in growing site or location should be made into separate collections if they are separated by more than 1 mile between sites.
