

## Section 3. Natural Gas

Natural gas prices are developed for the residential, commercial, industrial, transportation, and electric power sectors. Reported natural gas prices are retail prices for sales of natural gas to ultimate users.

Natural gas prices are intended to include all federal, state, and local taxes, surcharges, and adjustments billed to consumers. Although the EIA data collection form states that taxes are to be included in the reported gross revenues, it is likely that some respondents would not consider sales taxes as part of their companies' gross revenues and may not report them. As a result, consumer sales taxes may not be covered in full. For more information see *End-Use Taxes: Current EIA Practices*, page 23, <http://www.eia.gov/finance/archive/0583.pdf>.

Estimates of the amount of natural gas consumed by the residential, commercial, industrial, and electric power sectors are taken from the State Energy Data System (SEDS). Estimates for the industrial sector are adjusted to remove estimated refinery consumption and lease and plant use of natural gas, and estimates for the transportation sector are adjusted to remove pipeline fuel in each state. (See the discussion in Section 7, "Consumption Adjustments for Calculating Expenditures," at <http://www.eia.gov/state/seds/seds-technical-notes-complete.cfm>.)

The consumption estimates are for natural gas including supplemental gaseous fuels (SGF). SGF are introduced into or commingled with natural gas, and increase the volume available for disposition. Because SGF are mostly derived from fossil fuels, which are already accounted for, they are removed from total energy consumption in Btu (see Sections 6 and 7 of the Consumption Technical Notes) to eliminate any double counting. However, since there are no reliable data to estimate the price of SGF, total energy expenditures in Btu are not adjusted to eliminate the double counting.

### Residential, commercial, and industrial sectors

#### *Prices: 1987 forward*

All natural gas physical unit prices by state for the residential, commercial, and industrial sectors are taken from data collected on the Form EIA-176, "Annual Report of Natural and Supplemental Gas Supply and Disposition." These prices are available on the U.S. Energy Information Administration's

(EIA) website at <http://www.eia.gov/naturalgas/data.cfm> and published in the State Summaries tables of the EIA *Natural Gas Annual*.

#### *Prices: 1970 through 1986*

All natural gas physical unit prices for the residential, commercial, and industrial sectors are calculated from value and quantity of sales data from the EIA *Natural Gas Annual (NGA)*, *Historical Natural Gas Annual (HNGA)*, or its predecessor report, *Natural Gas Production and Consumption*. State prices are calculated directly from the data sources as average revenue per unit of sales by natural gas utilities. Prices for each of the three sectors are calculated by dividing the value of natural gas, reported in thousands of dollars, by the quantity of natural gas sold, as reported in million cubic feet.

For 1970 through 1979, both the value and quantity of sales data from the HNGA are reported as composites for Maryland and the District of Columbia, and for Maine, New Hampshire, and Vermont. In each case, the combined prices are assigned to each of the states in the composite.

#### *Btu prices: all years*

State Btu prices for all years are calculated by using the physical unit price series and the state-level average conversion factors for sectors other than electric power. U.S. Btu prices are calculated as the average of the state Btu prices, weighted by consumption data from SEDS and adjusted for process fuel consumption in the industrial and transportation sectors.

[html](#), Tables 31 and 32.

1987 and 1988: EIA, *Historical Natural Gas Annual, 1930 Through 2000*, [http://www.eia.gov/oil\\_gas/natural\\_gas/data\\_publications/historical\\_natural\\_gas\\_annual/hnga.html](http://www.eia.gov/oil_gas/natural_gas/data_publications/historical_natural_gas_annual/hnga.html), Table 26 (residential), Table 28 (commercial), and Table 31 (industrial).

1980 through 1986: Calculated from quantity and value data published in the EIA *Natural Gas Annual, Volume 1*, Table 11 (1980), Table 14 (1981 through 1985), and Table 15 (1986). Comparable price data are available in the EIA *Historical Natural Gas Annual, 1930 Through 2000*, Table 26 (residential), Table 28 (commercial), and Table 31 (industrial).

1970 through 1979: Calculated from quantity and value data published in the Bureau of Mines, U.S. Department of the Interior, *Natural Gas Production and Consumption*, Table 6 (1970 and 1979) and Table 7 (1971 through 1978). Comparable price data are available in the EIA *Historical Natural Gas Annual, 1930 Through 2000*, Table 26 (residential), Table 28 (commercial), and Table 31 (industrial).

### Consumption

1970 forward: EIA, State Energy Data System, residential, commercial, and industrial natural gas consumption.

### Conversion factors: all years

EIA, conversion factors published in State Energy Data System Consumption Technical Notes, Tables B4 and B5, <http://www.eia.gov/state/seds/seds-technical-notes-complete.cfm>.

## Transportation sector

Most of the natural gas used for transportation is consumed in pipeline operations and is discussed in Section 7, "Consumption Adjustments for Calculating Expenditures," at <http://www.eia.gov/state/seds/seds-technical-notes-complete.cfm>. Data for natural gas delivered for use as vehicle fuel are available beginning in 1990. In prior years, these data are included in the commercial sector. Much of the natural gas delivered for vehicle fuel represents deliveries to fueling stations that are used primarily by fleet vehicles.

For 2013 forward, vehicle fuel prices are no longer published in the *Natural Gas Annual*. They are derived by dividing vehicle fuel sales revenue by vehicle fuel sales volume extracted from the EIA Natural Gas Annual Respondent Query System and aggregated to the state level. Missing prices for states shown in

**Table TN3.1. Natural gas vehicle fuel price assignments from commercial sector prices, 2013 forward**

State	Year
AK	2013–2014
DC	2013–2014
HI	2013–2014
ME	2013–2014
MI	2013–2014
MS	2013
NH	2013
NJ	2013
SD	2013–2014
VT	2013–2014
WV	2013–2014

Table TN3.1 are assigned the state's commercial sector prices.

For 1992 through 2012, missing vehicle fuel prices are assigned the average price of neighboring states as shown in Table TN3.2. The South Carolina price in 1998 is out of range and the price of natural gas used as vehicle fuel in Georgia for 1998 is assigned.

### Data sources

#### Prices

2013 forward: EIA, Natural Gas Annual Respondent Query System, <http://www.eia.gov/cfapps/ngqs/ngqs.cfm>, "176 Custom Report (User-defined)," Vehicle Fuel Sales Revenue and Vehicle Fuel Sales Volume.

1990 through 2012: EIA, *Natural Gas Annual*, State Summaries tables, also available at [http://www.eia.gov/dnav/ng/ng\\_pri\\_sum\\_a\\_EPGO\\_PDV\\_DMcf\\_a.htm](http://www.eia.gov/dnav/ng/ng_pri_sum_a_EPGO_PDV_DMcf_a.htm). Comparable price data through 1996 are available in the *Historical Natural Gas Annual 1930 Through 2000*, [http://www.eia.gov/oil\\_gas/natural\\_gas/data\\_publications/historical\\_natural\\_gas\\_annual/hnga.html](http://www.eia.gov/oil_gas/natural_gas/data_publications/historical_natural_gas_annual/hnga.html), Table 34.

#### Consumption

1990 forward: EIA, State Energy Data System, natural gas vehicle consumption.

### Conversion factors: all years

EIA, conversion factors published in State Energy Data System Consumption Technical Notes, Tables B4 and B5, <http://www.eia.gov/state/seds/seds-technical-notes-complete.cfm>.

## Electric power sector

### *Prices: 2002 forward*

All natural gas physical unit prices by state for the electric power sector are taken from the State Summaries tables of the EIA *Natural Gas Annual*. Prior to 2008, where individual state prices are unavailable, they are developed by calculating the average price of all available surrounding states. From 2008 forward, the average delivered cost of natural gas to regulated electric power plants, compiled from Schedule 2 of the EIA-923, “Power Plant Operations Report,” is used to supplement missing *Natural Gas Annual* prices. If prices from both sources are not available, the average price of all available surrounding states is used. Table TN3.3 lists the states and years where price assignments are made.

### *Prices: 1973, 1974, 1983 through 2001*

Natural gas prices by state are reported in the EIA *Cost and Quality of Fuels for Electric Plants (C&Q)* for gas consumed at steam-electric plants only. Btu prices are taken from the C&Q, and converted from cents to dollars per million Btu.

Where individual state prices are unavailable from C&Q, they are developed from physical unit prices published in Tables 26 through 76 of the *NGA* (from 1997 forward), or the *Historical Natural Gas Annual, 1930 Through 2000 (HNGA)*, from 1987 through 1996). Physical unit prices prior to 1987 are calculated by dividing the value of natural gas, reported in thousands of dollars, by the quantity of natural gas sold, reported in million cubic feet.

Prices are not available from either C&Q or the *NGA* and *HNGA* for some years. In these cases, quantity-weighted Census division prices from C&Q are assigned. In addition, prices for Montana in 1997, Vermont in 1986, and Washington in 1986, 1987, 1990, and 1997 use quantity-weighted Census division prices from C&Q for more consistent prices than those available from the *HNGA* or more consistent with values in previous and later years. Table TN3.3 lists the states and years for which *HNGA* or C&Q Census division prices are used.

### *Prices: 1980 through 1982*

State-level Btu and physical unit prices for 1980 through 1982 are taken from C&Q for all reporting plants. Physical unit prices are taken directly from the data source, while Btu prices are converted from cents to dollars per million Btu. Where individual state prices are unavailable from C&Q, they are computed from value and quantity of sales data from *HNGA*.

### Prices: 1973 through 1979

State-level prices are reported separately by C&Q for gas consumed at steam-electric plants and gas consumed at combustion turbine and internal combustion units. Weighted-average Btu prices are calculated by using the two C&Q prices and the respective gas deliveries for steam-electric and combustion use. Where individual state prices are unavailable from C&Q, they are computed from value and quantity of sales data from HNGA. For the New Hampshire price in 1977 a combined price is computed from value and quantity of sales data from the HNGA data for Maine, New Hampshire, and Vermont.

### Prices: 1970 through 1972

State-level prices for 1970 through 1972 are taken from *Natural Gas Production and Consumption* and are calculated similarly to the way prices for the residential, commercial, and industrial sectors are calculated. Prices, as average revenue per unit of sales, are computed from value and quantity of sales data from the source reports. A combined price is reported for New Hampshire and Vermont for 1971 and 1972, and each of these states is assigned the combined price. State Btu prices are calculated from the physical unit prices by using the state-level electric power conversion factors.

### U.S. prices: all years

U.S. Btu prices are calculated as the average of the state Btu prices, weighted by consumption data from SEDS.
