

HC-144 MEDIUM RANGE SURVEILLANCE AIRCRAFT

Acquisition
Directorate

CHARACTERISTICS

Length:	70 feet 2 inches
Wingspan:	84 feet 8 inches
Height:	26 feet 10 inches
Maximum Weight:	36,380 pounds
Cruise Speed:	215 knots true airspeed
Range:	2,100 nautical miles
Endurance:	10+ hours

HC-144 Ocean Sentry

FEATURES

- Standardized Minotaur mission system across all Coast Guard fixed-wing aircraft (under development)
- Glass cockpit instrument panel, autopilot and avionics suite
- Multimode search radar and electro-optical/infrared sensors
- Mission data recording and a first responder/law enforcement and maritime communications suite
- Airborne Automatic Identification System
- Secure and nonsecure voice and data using satellite communications

PROGRAM DESCRIPTION

In combination with the C-27J Spartan, the HC-144 Ocean Sentry provides maritime patrol capabilities as part of the Coast Guard's medium range surveillance aircraft fleet.

The fixed-wing turboprop aircraft's extensive sensor capability and endurance of more than 10 hours help the Coast Guard perform its drug and migrant interdiction, disaster response, and search and rescue missions more effectively.

The HC-144's cockpit affords superior situational awareness. Tactical communications enable crews to track, manipulate and transfer contact information to multiple responding units. The rear ramp allows the aircraft to be reconfigured for varied operations, including command and control, medical

evacuation or cargo transport.

The Coast Guard is upgrading its 18 HC-144As to improve mission effectiveness and situational awareness through the Ocean Sentry Refresh project. Each aircraft will receive a new cockpit control and display unit, used in flight management as the primary avionics computer for communication control, navigation and equipment monitoring. Upon completion, each aircraft is redesignated as an HC-144B.

The service is also integrating the Navy's Minotaur mission system architecture across its fixed-wing aircraft fleet. The Minotaur integration process for the prototype HC-144B began at Naval Air Station Patuxent River, Maryland, in July 2016.

Mission execution begins *here*.
