

Monthly MDMAP Accumulation Surveys: Quick Reference Guide

Before you go into the field:

1. Print the Accumulation Survey Debris Datasheet.
2. Review survey techniques and collect your field supplies & safety gear.
3. Check the weather forecast & tides.
4. Set aside time to upload your data when you return.

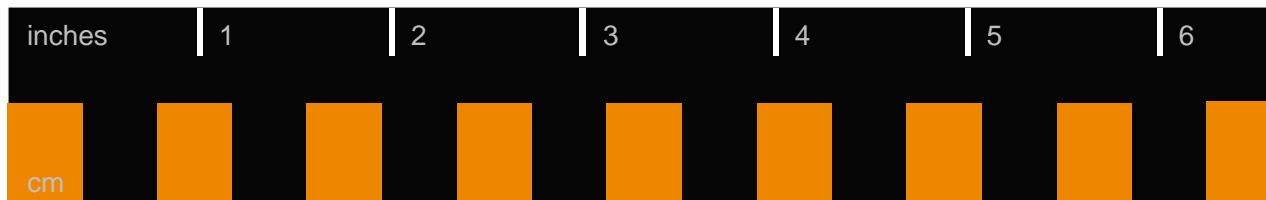

Once you get there:

All debris >2.5 cm is recorded and removed from your shoreline site.

1. Complete page 1 of the Survey Debris Data Sheet.
2. Measure out survey plot: Navigate to your site start point, measure 100 meter shoreline length, mark four corners of survey plot, & record GPS coordinates for each corner.
3. Survey the entire site according to your preferred walking pattern, remove & record debris as you go.
4. Can't identify an item? Take a photo and search the Monitoring Photo Gallery when you get home.
5. Enter survey data into the MDMAP database as soon as possible after surveys.

Record items larger than 30 cm (~ 1 ft) in any dimension as "large debris" on the Debris Data Sheet

* Print this document as "Actual Size" to ensure that ruler is to scale.

**Only tally items
that are at least
2.5 cm***
