TEXAS ACADEMY OF MATHEMATICS AND SCIENCE Mechanical and Energy Engineering Pathway Course Descriptions

Students at the Texas Academy of Mathematics and Science must pass all courses taken. The course descriptions have been taken from the University of North Texas catalog:

CHEM 1410 General Chemistry for Science Majors

Fundamental concepts, states of matter, periodic table, structure and bonding, stoichiometry, oxidation and reduction, solutions, and compounds of representative elements.

CHEM 1413 Honors General Chemistry

Fundamental concepts, states of matter, periodic table, structure, solutions and compounds of representative elements.

CHEM 1420 General Chemistry for Science Majors

Thermodynamics, reaction rates, equilibrium, electrochemistry, organic chemistry, polymers, radioactivity and nuclear reactions.

CHEM 1423 Honors General Chemistry

Thermodynamics, reaction rates, equilibrium, electrochemistry and nuclear chemistry. This course is strongly advised and may be required for students planning to engage in undergraduate chemical research.

CHEM 1430 Laboratory Sequence for General Chemistry

Laboratory techniques, weighing, errors and significant figures, identification and purification of substances, and elementary quantitative analysis.

CHEM 1440 Laboratory Sequence for General Chemistry

Quantitative, gravimetric and volumetric analyses; coordination compounds.

ENGL 1315 *Writing about Literature I* Writing as a means of critical thinking using readings from poetry and drama as sources for essay topics. Emphasis on the process of perfecting the essay through the writing of several drafts.

ENGL 1325 Writing about Literature II

Study of relationship between writing and research with research topics drawn from readings from prose fiction. Emphasis on the process of perfecting the essay through the writing of several drafts.

ENGL 2331 World Literature

Comparative and critical reading skills from a global perspective, tracing significant literary themes, texts, movements and genres across a wide range of world literatures and cultures from ancient times to the present day.

ENGR 1304 *Engineering Graphics*

Fundamentals and principles of engineering drafting practices used in technical processes.

- HIST 2610United States History to 1865From colonial origins through the Civil War.
- HIST 2620United States History since 1865From the Civil War to the present.

MATH 1650 Pre-Calculus

Preparatory course for calculus: trigonometric functions, their graphs and applications; sequences and series; exponential and logarithmic functions and their graphs; graphs of polynomial and rational functions; general discussion of functions and their properties.

MATH 1710 Calculus I

Limits and continuity, derivatives and integrals; differentiation and integration of polynomial, rational, trigonometric, and algebraic functions; applications, including slope, velocity, extrema, area, volume and work.

MATH 1720 Calculus II

Differentiation and integration of exponential, logarithmic and transcendental functions; integration techniques; indeterminate forms; improper integrals; area and arc length in polar coordinates; infinite series; power series; Taylor's theorem.

MATH 2700 *Linear Algebra and Vector Calculus* Vector spaces over the real number field; applications to systems of linear equations and analytic geometry in En, linear transformations, matrices, determinants and eigenvalues.

MATH 2730 Multivariable Calculus

Vectors and analytic geometry in 3-space; partial and directional derivatives; extrema; double and triple integrals and applications; cylindrical and spherical coordinates.

MEEN 1000 Discover Mechanical and Energy Engineering

Introductory course in Mechanical and Energy Engineering (MEE). Topics include experiences of practicing engineers; engineering ethics, professional conduct, and values; and an introduction to the principle disciplines of MEE taught through a hands-on energy-concentrated project.

MEEN 2301 Mechanics I

Basic concepts of forces in equilibrium and how to apply them to engineering systems. Distributed forces and loads. Frictional forces. Inertial properties. Equilibrium of particles and finite sized bodies. Bending moments in beams.

MTSE 3000 Fundamentals of Materials Science and Engineering I

Introduces the fundamentals of materials science and engineering, including atomic interactions, introduction of crystalline and non-crystalline structures, the concept of materials defects, the evolution of microstructure/structure, the influence of composition and processing on microstructure, and how composition and structure impact the properties of a wide variety of engineering material.

MTSE 3003 Fundamentals of Materials Science and Engineering Laboratory

Laboratory designed to introduce students to the fundamentals of materials science and engineering. Students gain hands-on experience with processing and characterization of metals, ceramics, and polymers. Topics include optical metallography, tensile testing, hardness testing, impact testing, heat treating, melting and casting. Students perform experiments, analyze results, write reports, and give presentations.

PHYS 1710 Mechanics

Laws of motion; inertia, acceleration, force, energy, momentum and angular momentum. Rotational and oscillatory motion. Gravitation.

PHYS 1730Laboratory in Mechanics

Laboratory to accompany PHYS 1710.

PHYS 2220 Electricity and Magnetism

Electric fields, dc and ac circuits, magnetic fields and magnetic induction. Electric and magnetic properties of matter.

PHYS 2240 *Laboratory in Wave Motion, Electricity, Magnetism, and Optics* Laboratory to accompany PHYS 2220.

PSCI 2305 US Political Behavior and Policy

Explores the connection between the will of the people and the policies implemented by government by focusing on individual political values and attitudes, the mechanisms that connect individual beliefs to government action (parties, interest groups, the media, and elections), and the outcomes of government policy.

PSCI 2306 US and Texas Constitutions and Institutions

An introduction to the institutions of government, with particular emphasis on the U.S. and Texas Constitutions. Focus on the structure and powers of the three branches of government (both national and Texas); the division of power between those branches (separation of powers); the division of power between the national and state governments (federalism); and issues related to civil rights and civil liberties. Satisfies the legislative requirement for a course emphasizing the Texas constitution.

TECM 2700 Technical Writing

Expository writing, especially for science, pre-engineering and business students.

Updated: July 2020
