

FY2011: Regional Integrated Ocean Observing System Development

U.S. IOOS[®] is an operational system and a network of regional partners responsible for regional observations, data management, modeling and analysis, education and outreach, and research and development. The overarching purpose of U.S. IOOS is to address regional and national needs for ocean data and information. NOAA continued a merit-based funding process in 2011 to further development of the IOOS regional network. IOOS regional partners provide coordination with regional stakeholders while contributing data and other outputs to the national system – supporting regional priorities while advancing national objectives.

SOUTHERN CALIFORNIA REGION

The Southern California Coastal Ocean Observing System (SCCOOS) provides coverage from Point Conception south to the Mexico border. The principal goal of SCCOOS is to provide observations and data products to a diverse stakeholder community of managers and planners, operational decision makers, scientists, and the general public.

NOAA Funding:

Prior to FY 2011, IOOS regional partners received two awards – one for development of the Regional Coastal Ocean Observing System (RCOOS), and one for planning and stakeholder engagement by a Regional Association (RA). In FY 2011, IOOS made a single award to each region for management of these activities. Funds awarded by NOAA since establishment of the U.S. IOOS Program Office are as follows:

FY 2011 - \$1,768,000
FY 2010 - \$1,400,000 RCOOS (plus \$11,900 for a shellfish industry ocean acidification workshop and \$510,000 to continue support for High Frequency Radar search-and-rescue operations), \$395,210 RA
FY 2009 - \$1,341,466 RCOOS (3 awards), \$393,093 RA
FY 2008 - \$500,000 RCOOS, \$353,785 RA

Regional Priorities:

As the regional ocean observing system for Southern California, SCCOOS has developed the capabilities to support short-term decision-making and long-term assessment by implementing and leveraging biological, chemical, and physical observations, many of which are available in near real-time.

SCCOOS has aligned its organizational priorities and objectives with the focus areas designated by the National Federation of Regional Associations for Coastal and Ocean Observing:

- Ecosystems and Climate Trends: To monitor climate trends and environmental effects on the Southern California Bight by collecting physical, chemical, and biological time series.
- Water Quality: To provide monitoring, tracking, and prediction tools for harmful algal blooms, outfall and stormwater plumes, and surfzone contaminants.

FY2011: Regional Integrated Ocean Observing System Development

- Marine Operations: To advance integrated, customized products that are critical for safe and efficient navigation, search and rescue, and oil spill response.
- Coastal Hazards: To promote safe recreational use of beaches and provide warnings of wave and tide-induced coastal inundation.
- Coastal and Marine Spatial Planning: To work collaboratively to pursue a comprehensive, adaptive, ecosystem-based spatial planning process.

In FY11, SCCOOS will continue its work with local, state, and federal agencies, resource managers, industry, policy-makers, educators, scientists, non-governmental organizations, and the public to make ocean and coastal information more widely available in a variety of formats. These efforts will ensure that products are useful and easy to access, while preserving the necessary detail to support the scientific and education communities. SCCOOS continues to explore new visualizations and technologies to make data products more comprehensible and widely available. In order to achieve an effective outreach strategy, that fully engages a wide range of audiences, SCCOOS focuses on developing projects through partnerships on the local, regional, and national levels. SCCOOS collaborates with the Central and Northern California Ocean Observing System (CeNCOOS) on statewide issues and formed a Joint Strategic Advisory Committee, of users and stakeholders across the state, to create a unified and coordinated approach to ocean observing in California. SCCOOS is also committed to contributing to larger ocean observing efforts nationally and internationally.
