

# Survival estimates using MARK for Imperial Ponds razorback sucker populations

Guillermo Ley, Jane Fencl, Brian Kesner and Paul  
Marsh

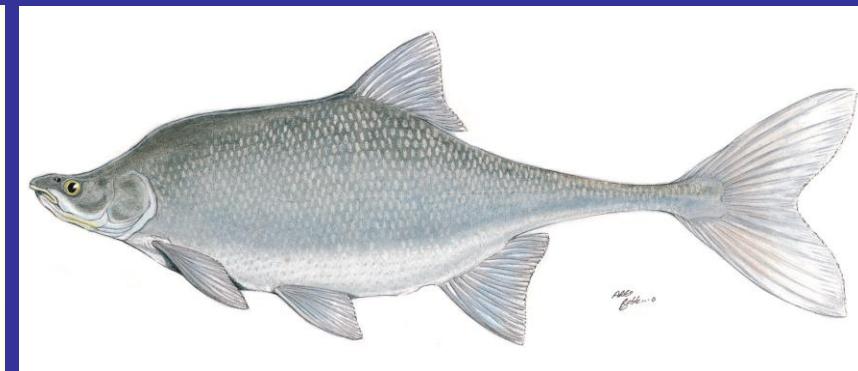

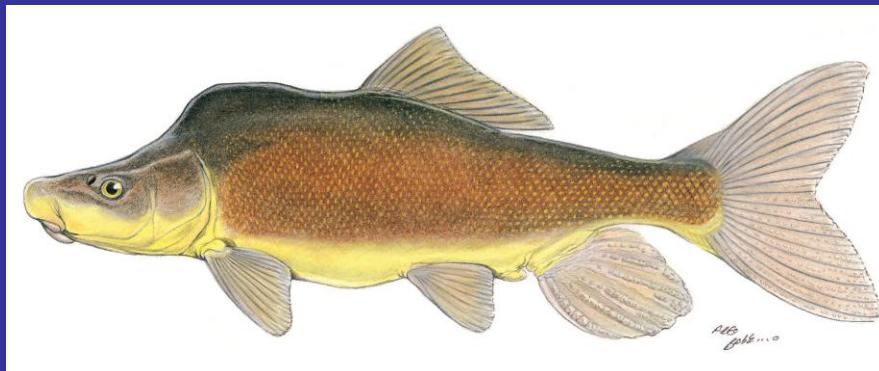

# Study Area

- Imperial National Wildlife Refuge
- 6 Pond Complex

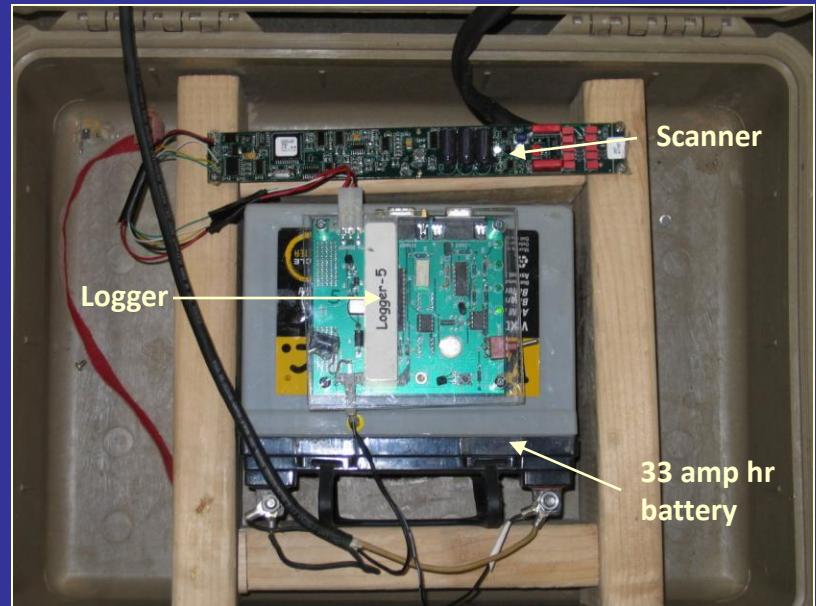

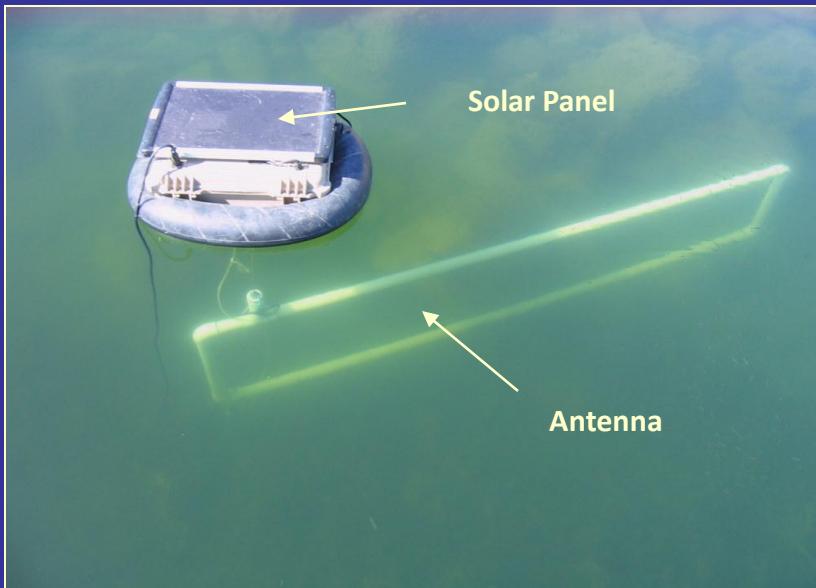

# Off-channel habitats

- Conserve genetic viability and prevent extinction
- Increase habitat for endangered native fish
- Study all aspect of native fish life cycle

# Remote Sensing

- Remote Sensing Units
  - Allflex scanner in 1520 Pelican cases
  - 2.3 m x 0.7 m antenna

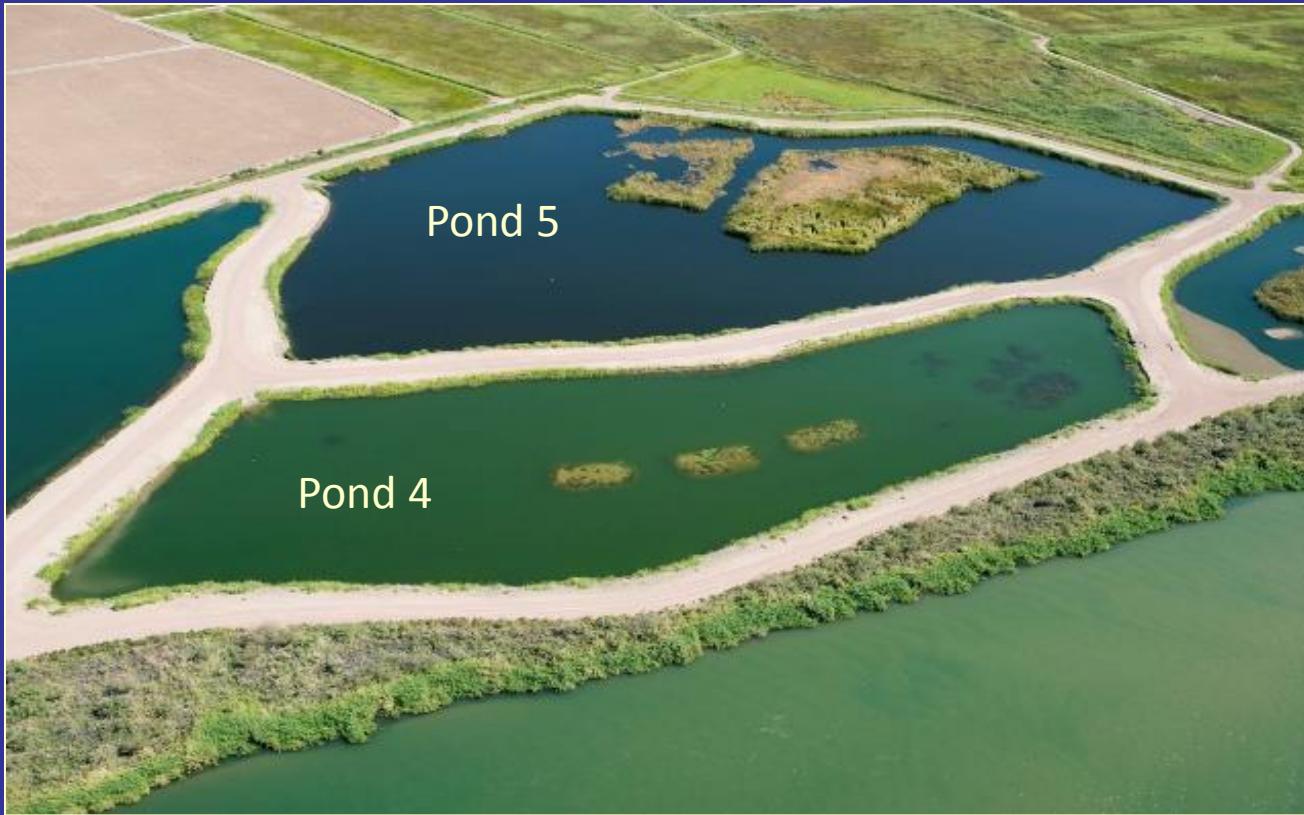

- Standard Effort
  - Monthly sampling
  - 24 hour period
  - 4 remote sensing units

# Program MARK

- MARK Modeling software
  - Input encounter histories
  - Cormack-Jolly-Seber Model
  - Two parameters apparent survival probability (Phi) and encounter probability (p)
  - Parameters can vary over time or can remain constant
  - All encounter (p) probabilities allow to vary over time
  - Only present apparent survival probability (Phi) values

# Populations Modeled

- Pond 4 (FDX tags)  
272 fish in Dec 2007

# Populations Modeled

- Pond 2 (HDX tags)  
59 fish in stocked Dec 2008

# Populations Modeled

- Pond 6 (HDX tags)  
198 fish in stocked Jan 2009
