

Older Americans With HIV

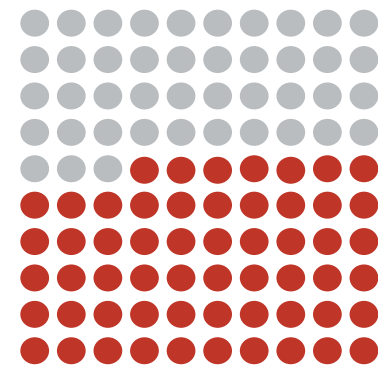

Compared to all people with HIV, older Americans have better HIV care outcomes. For every **100 people aged 55 and older with HIV**:

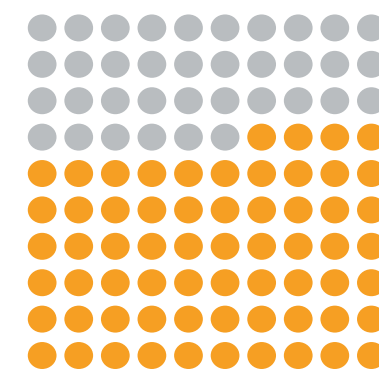

95
received
an HIV
diagnosis

71
received
some
HIV care

57
were
retained
in care

64
were virally
suppressed

For comparison, for every **100 people overall** with HIV, **86** received an HIV diagnosis, **65** received some HIV care, **50** were retained in care, and **56** were virally suppressed.
