U.S. Energy Information
Administration

Annual Coal Report 2011

November 2012

This report was prepared by the U.S. Energy Information Administration (EIA), the statistical and analytical agency within the U.S. Department of Energy. By law, EIA's data, analyses, and forecasts are independent of approval by any other officer or employee of the United States Government. The views in this report therefore should not be construed as representing those of the Department of Energy or other Federal agencies.

Contacts

This publication was prepared by Paulette Young under the direction of James Kendell, Director, Office of Oil, Gas, and Coal Supply Statistics with the U.S. Energy Information Administration, U.S. Department of Energy. General information about the data in this report can be obtained from Paulette Young at (202) 586-1719, or email at paulette.young@eia.gov. Specific questions

concerning the Executive Summary should be directed to Tejasvi Raghuveer at (202) 586-8926, or email tejasvi.raghuveer@eia.gov. All other questions on coal statistics should be directed to the Office of Communications at (202) 586-8800, or email infoctr@eia.gov.

Preface

The *Annual Coal Report* (ACR) provides information about U.S. coal production, number of mines, prices, productivity, employment, productive capacity, and recoverable reserves to a wide audience, including Congress, Federal, and State agencies, the coal industry, and the general public. This report is published by the U.S. Energy Information Administration (EIA) to fulfill data collection and dissemination responsibilities as specified in the Federal Energy Administration Act of 1974 (Public Law 93-275), as amended.

This report presents annual data on coal production, prices, recoverable reserves, employment, productivity, productive capacity, consumption, and stocks. U.S. coal production, employment, and productivity are based on the U.S. Department of Labor's Mine Safety and Health Administration's Form 7000-2, "Quarterly Mine

Employment and Coal Production Report." Prices, recoverable reserves, and productive capacity are based on EIA's annual survey form, EIA-7A, "Coal Production and Preparation Report."

This report is the 36th annual report on coal production published by EIA and continues the series formerly included in the *Minerals Yearbook* published by the Bureau of Mines. All data for 2011 and prior years are final.

The office of Oil, Gas, and Coal Supply Statistics acknowledges the cooperation of the respondents in supplying the information published in the *Annual Coal Report* and appreciates the valuable assistance of State coal mining agencies and the U.S. Department of Labor, Mine Safety and Health Administration.

26. U.S. coal consumption by end use sector, by census division and State, 2011, 2010	42
27. Year-end coal stocks by sector, by census division and State, 2011, 2010	44
28. Average sales price of coal by State and mine type, 2011, 2010.....	47
29. Average sales price of coal by State and underground mining method, 2011	48
30. Average sales price of coal by State, county, and number of mines, 2011.....	49
31. Average sales price of coal by State and coal rank, 2011	53
32. Average sales price of coal by mine production range and mine type, 2011	54
33. Average sales price of U.S. coal by State and disposition, 2011	55
34. Average price of coal delivered to end use sector by census division and State, 2011, 2010.....	57

Executive Summary

Production

Coal production in 2011 increased slightly from 2010, driven by export demand, to roughly 1.1 billion short tons. Underground and surface production increased 2.5 and 0.4 percent, respectively. Also, the total number of mines in the United States increased 3.1 percent in 2011.

Regional production varied. Production in the Western Region of the United States (587.6 million short tons) declined 0.7 percent from 2010. The region, which includes Wyoming, was affected by the decrease in coal-fired electricity generation and limited access to foreign markets. Western production during 2011 was also affected by flooding in Montana.

Appalachian production (336.0 million short tons) increased 0.2 percent from 2010. The increase was largely due to increased production and exports of bituminous coal from the region.

Coal production in the Interior region (170.3 million short tons) increased 9.4 percent from 2010. Texas, Illinois, and Indiana increased production 12.0, 13.6, and 7.1 percent, respectively. While demand for coal from several new power plants in Texas drove the State's production in 2011, export demand led to production increases in the latter two States.

Productive Capacity

In 2011, productive capacity of coal mines increased by 2.5 million short tons to 1.3 billion short tons. Capacity utilization increased 2.83 percentage points to 79.3 percent at underground mines, while utilization at

surface mines (83.3 percent) remained similar to the 2010 level.

Employment

In 2011, the average number of employees in U.S. coal mines increased 6.3 percent to 91,611 (including refuse recovery). In addition, average employment at surface and underground mines increased 4.3 and 7.7 percent, respectively. Arizona, Kansas, Louisiana, Mississippi, Oklahoma, Tennessee, and Utah, however, experienced decreases in mine employment.

Consumption

In 2011, domestic consumption of metallurgical coal by the coking industry rose 1.6 percent to 21.4 million short tons. In contrast, consumption of steam coal by the electric power, industrial, and commercial and institutional sectors decreased 4.4, 6.2, and 9.3 percent, respectively. Mild winter weather led to a decline in total electricity generation, leaving high stock levels. Natural gas prices also declined during 2011, allowing facilities that can use both coal and natural gas to alternate between fuels and company that have portfolios of coal and natural gas plants to utilize their gas plants more.

Sales

The average sales price of coal increased 15.2 percent to \$41.01 per short ton. However, the change in average sales price of coal from underground mines was greater (16.0 percent) than the change in average sales price of coal from surface mines (11.9 percent). Significant changes in 2011 include:

- average sales price of coal from Virginia (\$135.14 per short ton) rose 37.3 percent from 2010 level to the highest price in the Nation;
- change in average sales price of coal from Pennsylvania (\$79.47 per short ton) and West Virginia (\$84.81 per short ton) was 27.1 and 21.0 percent, respectively; and
- average sales price of metallurgical coal from underground mines in Alabama and Southern West Virginia increased to more than \$100 per short ton.

1 For a definition of coal producing regions, see the Glossary.

2 Mines that produce greater than 50 percent of their coal by continuous mining methods.

3 Mines that produce greater than 50 percent of their coal by conventional mining methods or mines that produce coal using shortwall, scoop loading, hand loading, or other methods or a 50/50 percent continuous conventional split in mining methods, or mines that produce less than 25,000 short tons, which are not required to provide data.

4 Mines that have any production from the longwall mining method. A typical longwall mining operation uses 80 percent longwall mining and 20 percent continuous mining.

- = No data are reported.

Note: Totals may not equal sum of components because of independent rounding.

U.S. Total	345,606	748,372	1,095,628	359	-	960

1 The coalbed ID number is a unique code assigned by EIA to each correlated coalbed or to coal-bearing geologic formations, coal groups, or coal zones. See Coalbed name discussion in note below.

2 Average thickness is the bed thickness weighted by bed production.

* Includes mines with production of less than 25,000 short tons, which are not required to provide data, and refuse recovery.

- = No data are reported.

NA = Not Available.

Note: Major coalbeds for this table are the top 25 producing coalbeds. The category 'Other Coalbeds' includes all coalbeds from which less than 8.0 million short tons were produced during the year. In some regions, coalbeds are characteristically discontinuous or uncorrelatable from one location to another, and production is identified by the geological formations, coal groups, or coal zones of the native rock where the coalbeds occur. These types of coalbeds are found primarily in the Rocky Mountain States and even in the Gulf Coast lignite belt. Coalbeds of these types are also included in 'Other Coalbeds,' even though production may exceed 8.0 million short tons. Totals may not equal sum of components due to independent rounding. The coalbed name given is the name most commonly used in the State having the greatest production from that coalbed. The States having greatest production for each coalbed are Alabama (coalbed 0280); Colorado (1750); Illinois (0484); Indiana (0483); Eastern Kentucky (0100, 0135, 0142, 0151, and 0168); Western Kentucky (0489); Montana (1699 and 1808); New Mexico (1488); North Dakota (1569); Pennsylvania (0036 and 0071); West Virginia (0084, 00103, 0111, 0121, 0157, and 0176); and Wyoming (1697, 1699, and 1787). In some other States where these are major producing beds, the following alternative coalbed names are also used: 0084, No. 5 (Ohio); 0111, Peach Orchard (Eastern Kentucky); 0121, Quakertown (Pennsylvania); 0157, Windrock (Tennessee); Phillips (Virginia); Chilton (West Virginia); 0142, Lower Splint (Virginia); 0151, Jellico (Tennessee); Taggart (Virginia); Cedar Grove (West Virginia); 0157, Elkhorn No. 1 (East Kentucky); Rich Mountain (Tennessee); 0168, Imboden (Virginia); No. 2 Gas (West Virginia); 0176, Middle Eagle (West Virginia); 0484, No. 11 (Western Kentucky); 0489, No. 5 (Illinois and Indiana).

1 For a definition of coal producing regions, see Glossary.

* One mine in New Mexico periodically produces both bituminous and subbituminous coal. When this occurs, it is double counted as a subbituminous and bituminous mine, but is not double counted in the total.

- = No data are reported.

Note: Totals may not equal sum of components because of independent rounding.

- = No data are reported.

w = Data withheld to avoid disclosure.

NA = Not Available.

Notes: Recoverable coal reserves at producing mines represent the quantity of coal that can be recovered (i.e. mined) from existing coal reserves at reporting mines. EIA's estimated recoverable reserves include the coal in the demonstrated reserve base considered recoverable after excluding coal estimated to be unavailable due to land use restrictions or currently economically unattractive for mining, and after applying assumed mining recovery rates; see Glossary for criteria. The effective date for the demonstrated reserve base, as customarily worded, is 'Remaining as of January 1, 2012.' These data are contemporaneous with the Recoverable Reserves at Producing Mines, customarily presented as of the end of the reporting year's mining, that is in this case, December 31, 2011. The demonstrated reserve base includes publicly available data on coal mapped to measured and indicated degrees of accuracy and found at depths and in coalbed thicknesses considered technologically minable at the time of determinations; see Glossary for criteria. All reserve expressions exclude silt, culm, refuse bank, slurry dam, and dredge operations. Reserves at Producing Mines exclude mines producing less than 25,000 short tons, which are not required to provide reserves data.

1 For a definition of coal producing regions, see the Glossary.

2 Mining operations that consist of a mine and preparation plant or preparation plant only processing both underground and surface coal are reported as two operations.

3 Includes all employees engaged in production, processing, development, maintenance, repair shop, or yard work at mining operations, including office workers.

4 Calculated by dividing total coal production by the total labor hours worked by all employees engaged in production, processing, development, maintenance, repair shop, or yard work at mining operations, including office workers.

* Absolute percentage less than 0.05.

- = No data are reported.

Note: Excludes preparation plants with less than 5,000 employee hours per year, which are not required to provide data.

Source: U.S. Energy Information Administration Form EIA-7A, 'Coal Production and Preparation Report,' and U.S. Department of Labor, Mine Safety and Health Administration Form 7000-2, 'Quarterly Mine Employment and Coal Production Report.'

U.S. Total	2.16	1.95	3.84	2.74

1 For a definition of coal producing regions, see the Glossary.

2 Mines that produce greater than 50 percent of their coal by continuous mining methods.

3 Mines that produce greater than 50 percent of their coal by conventional mining methods or mines that produce coal using shortwall, scoop loading, hand loading, or other methods or a 50/50 percent continuous/conventional split in mining method.

4 Mines that have any production from longwall mining method. A typical longwall mining operation use 80 percent longwall mining and 20 percent continuous mining.

- = No data are reported.

Note: For each State, stand alone preparation plant hours are distributed across mining methods by the proportion of underground hours for all stand alone mines. Productivity is calculated by dividing total coal production by the total direct labor hours worked by all employees engaged in production, preparation, processing, development, maintenance, repair shop, or yard work at mining operations, including office workers. Excludes mines producing less than 25,000 short tons of coal and preparation plants with less than 5,000 employee hours during the year, which are not required to provide data.

1 For a definition of coal producing regions, see the Glossary.

2 Includes all employees at preparation plants and tipples not co-located with a mine.

- = No data are reported.

Note: Productivity is calculated by dividing total coal production by the total labor hours worked by all employees engaged in production, preparation, processing, development, maintenance, repair shop, or yard work at mining operations, including office workers. Excludes preparation plants with less than 5,000 employee hours during the year, which are not required to provide data.

¹ For a definition of coal producing regions, see the Glossary.

- = No data are reported.

Note: Productivity is calculated by dividing total coal production by the total direct labor hours worked by all employees engaged in production, preparation, processing, development, maintenance, repair shop, or yard work at mining operations, including office workers. Excludes mines producing less than 25,000 short tons of coal and preparation plants with less than 5,000 employee hours during the year, which are not required to provide data.

Domestic Markets

Table 25. Coal consumers in the manufacturing and coke sectors, 2011

Company Name	Plant Location
Top Ten Manufacturers	
Archer Daniels Midland	IA, IL, MN, ND, NE
Carmeuse Lime Inc	AL, IL, IN, KY, MI, OH, PA, TN, VA, WI
Dakota Gasification Company	ND
Eastman Chemical Company	TN
Georgia-Pacific LLC	AL, GA, OK, VA, WI
Lafarge North America	IA, IL, KS, MI, MO, NY, OK, PA, WA
Mittal Steel USA	IN
NewPage Corporation	MD, MI, WI
Searles Valley Minerals	CA
U S Steel Corporation	AL, IN, MI
Other Major Manufacturers	
Alcoa Inc (Aluminum Company of America)	IN
Amalgamated Sugar Co LLC	ID
American Crystal Sugar Co	MN, ND
Ash Grove Cement Co	AR, KS, MT, NE, OR, UT
Blue Ridge Paper Prod Inc	NC
Buzzi Unicem USA	IL, IN, MO, OK, TX
California Portland Cement Co	AZ, CA
Cargill Incorporated	GA, IA, MI, NC, NY, OH, TN
Catalyst Paper Company	AZ
Celanese Acetate/Celco Plant	VA
Cemex Inc	CA, CO, FL, GA, KY, TN
Cliffs Natural Resources Silver Bay Pwr Co	MN
Domtar Industries Inc	AR, WI
Doyon Utilities	AK
Eastman Kodak Company	NY
FMC Corporation	WY
Glatfelter Corp	PA
Holcim (US) Inc	AL, CO, IA, MD, MS, NY, SC, UT
Ingredion Incorporated	IL, NC
Kapstone Kraft Paper Corporation	AL, FL, GA, LA, NC, SC
Kimberly Clark	PA
Lehigh Cement Co	AL, IA, IN, MD, PA
Meadwestvaco Corporation	VA
Norit Americas Inc	OK, TX
PH Glatfelter CO	OH
PPG Industries Inc	WV
RockTenn CP LLC	FL, VA
Solvay Chemicals Inc	WY
TATA Chemicals Ltd	WY
Tate and Lyle Ingredients Americas Inc	IL, IN, TN
Top Ten Coke Producers	
AK Steel Corp	KY, OH
DTE Energy Services	MI, PA
Drummond Company Inc	AL
Erie Coke Corp	PA
Mittal Steel USA	IN, OH
Mountain State Carbon	WV
SunCoke Energy Inc	IL, IN, OH, VA
Tonawanda Coke Corp	NY
United States Steel Corporation	IL, IN, PA
Walter Coke Inc	AL

Note: Major manufacturers are the top 40 coal consumers in the manufacturing sector. Major coke producers are the top 10 coal consumers in the coke plant sector. Manufacturers and coke producers are listed in alphabetical order.

Source: U.S. Energy Information Administration, Manufactures: Form EIA-3, 'Quarterly Coal Consumption and Quality Report, Manufacturing and Transformation/Processing Coal Plants and Commercial and Institutional Coal Users' and Coke Plants: Form EIA-5, 'Quarterly Coal Consumption and Quality Report, Coke Plants.'

- = No data are reported.

w = Data withheld to avoid disclosure.

Note: An average sales price is calculated by dividing the total free on board (f.o.b) rail/barge value of the coal sold by the total coal sold. Excludes mines producing less than 25,000 short tons, which are not required to provide data. Excludes silt, culm, refuse bank, slurry dam, and dredge operations. Totals may not equal sum of components because of independent rounding.

U.S. Total	78.02	70.15	63.18	70.47

1 Mines that produce greater than 50 percent of their coal by continuous mining methods.

2 Mines that produce greater than 50 percent of their coal by conventional mining methods or mines that produce coal using shortwall, scoop loading, hand loading, or other methods or a 50/50 percent continuous conventional split in mining method.

3 Mines that have any production from longwall mining method. A typical longwall mining operation uses 80 percent longwall and 20 percent continuous mining.

- = No data are reported.

w = Data withheld to avoid disclosure.

Note: An average sales price is calculated by dividing the total free on board (f.o.b) rail/barge value of the coal sold by the total coal sold. Excludes mines producing less than 25,000 short tons, which are not required to provide data. Excludes silt, culm, refuse bank, slurry dam, and dredge operations. w = Data withheld to avoid disclosure.

Note: An average sales price is calculated by dividing the total free on board (f.o.b) rail/barge value of the coal sold by the total coal sold. Excludes mines producing less than 25,000 short tons, which are not required to provide data. Excludes silt, culm, refuse bank, slurry dam, and dredge operations. Totals may not equal sum of components because of independent rounding.
