COVID-19 CONTACT TRACING WORKFLOW: CONTINUOUS EXPOSURE

People who live with a person with COVID-19 continue to be at risk until the infected person is no longer infectious or the exposure ends. Contacts should self-quarantine for 14 days¹ after their last contact with an infectious household member. They may therefore have to self-quarantine for longer than 14 days even if they don't feel sick.

Household contacts of COVID-19 positive persons.

A person with COVID-19 must self-isolate for 10 days since they began to feel sick, and at least 24 hours have passed with no fever, without the use of fever-reducing medications, AND other symptoms have improved. This is the infectious period.

Then, contact remains quarantined for 14 days AFTER the last exposure to the person with COVID-19 who was still infectious.

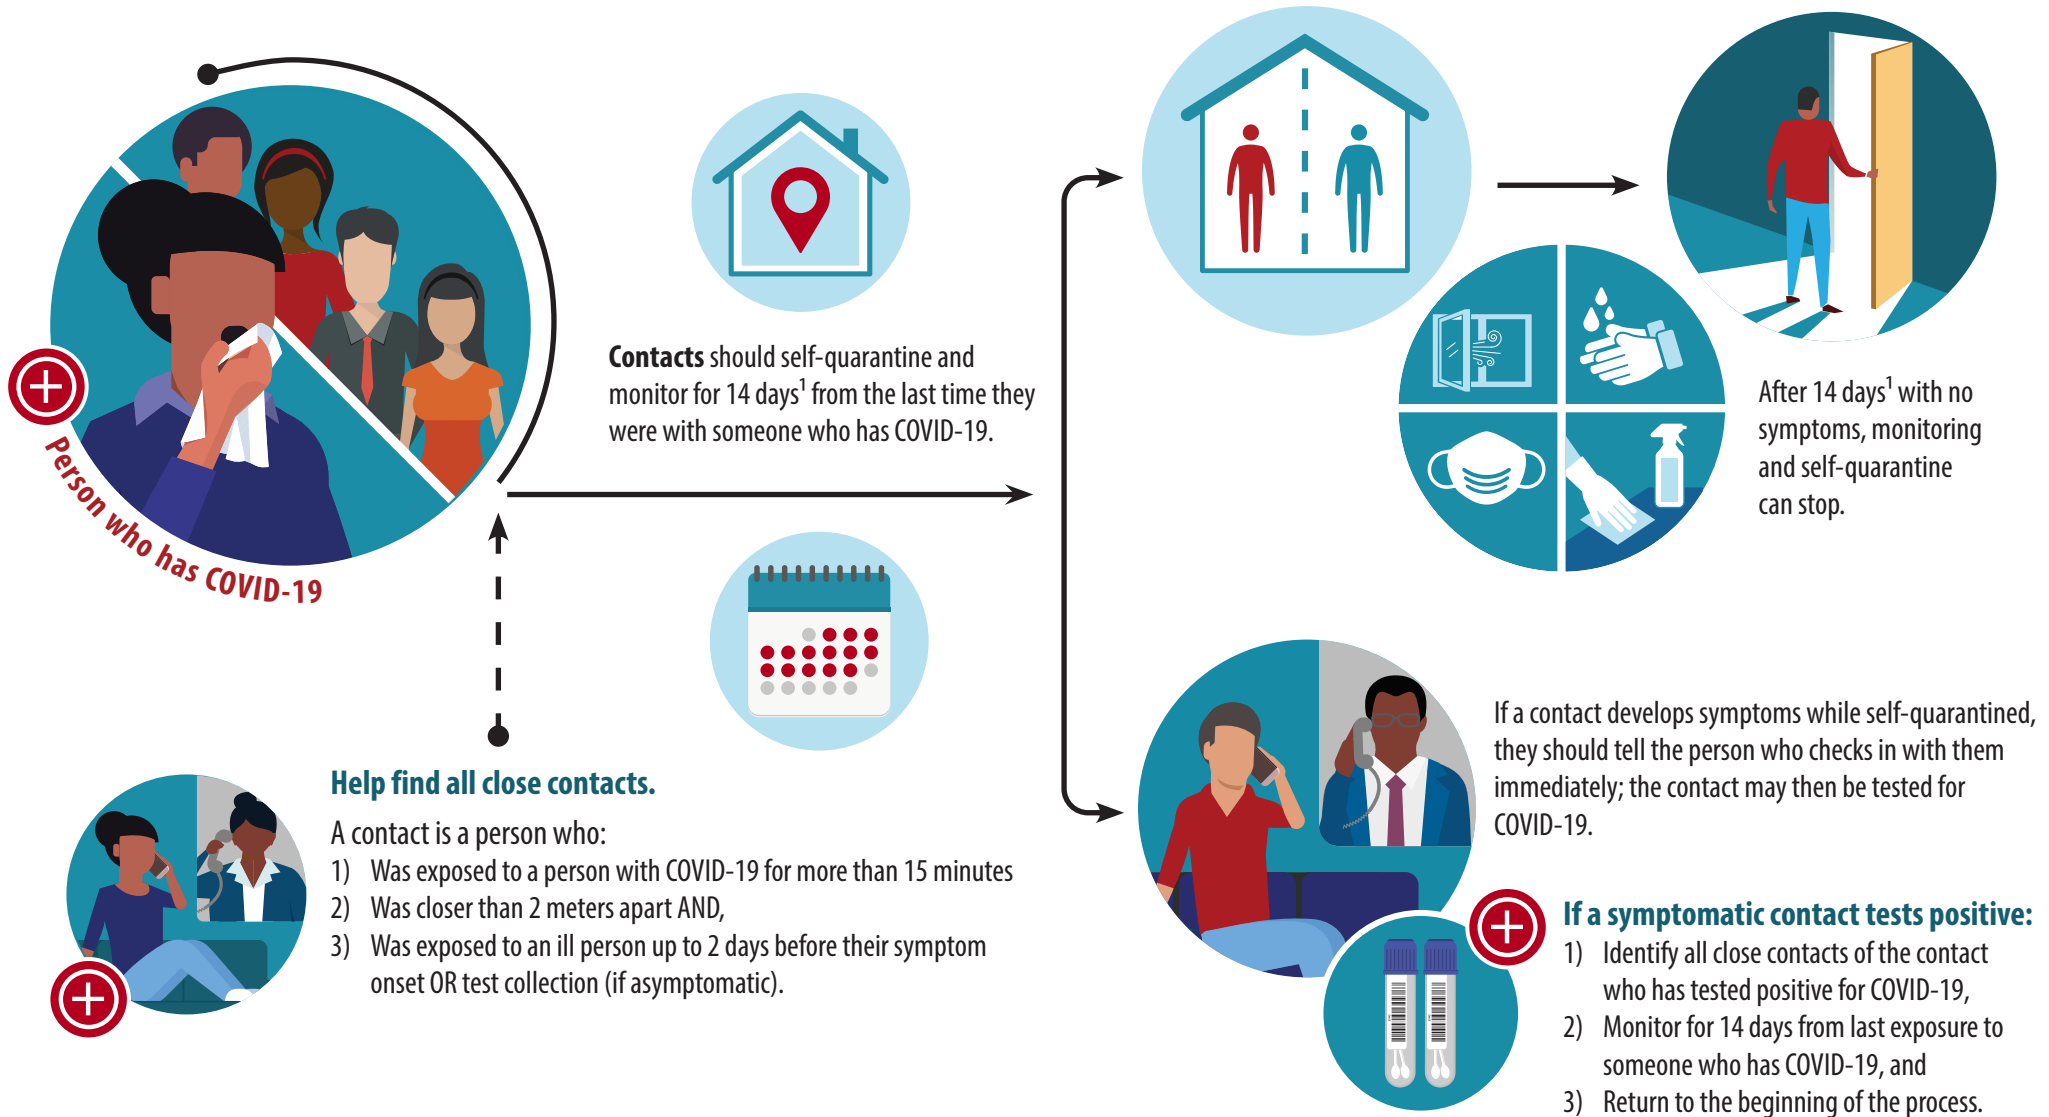

Contact tracers will continue to monitor contacts' symptoms and provide them with the necessary support through the end of the monitoring period (as prescribed by local policy).

1. See CDC domestic guidance for further information: <https://www.cdc.gov/coronavirus/2019-ncov/if-you-are-sick/quarantine.html>.

TRACING CONTACTS OF COVID-19 CASES

After being with someone who has COVID-19, contacts must self-quarantine for 14 days¹, even if they don't feel sick. **Contact tracing** can help us slow the spread of COVID-19.

1. See CDC domestic guidance for further information: <https://www.cdc.gov/coronavirus/2019-ncov/if-you-are-sick/quarantine.html>.

CONTACT TRACING: KEEPING YOUR COMMUNITY SAFE

Step 1: If you test positive for COVID-19, the Ministry of Health (MOH) will be notified to help stop the spread of COVID-19 in your community.

Step 2: A trained person talks with you to learn about the people who you have been in contact with.

Step 3: The MOH will contact the people who you have been in contact with, to help keep them safe, with your permission and without sharing your name. You can also contact these people to let them know they have been exposed to COVID-19.

Step 4: The MOH follows-up with contacts to monitor for illness.

Step 5: The MOH makes sure you and your contacts have a plan to stay away from others to keep them safe.

Step 6: The MOH will check in regularly to see how you are doing, if you need medical care, and when you can safely leave isolation.
