U.S. CENSUS BUREAU

ACKNOWLEDGMENTS

This report was prepared under the direction of **Kimberly P. Moore**, Assistant Chief for Special Studies and M3 Programs, Manufacturing and Construction Division. Within the Manufacturing and Construction Division, the preparation of this report was performed under the supervision of **Julius Smith Jr.**, Chief, Special Studies Branch, and **Dave Gromos**.

Review and analysis of the Pollution Abatement Costs and Expenditures data were performed by **Jeff Kellner** and **Andrea MacCarthy**.

The sampling and estimation methodologies were developed under the direction of **Paul L. Hsen**, Assistant Chief for Research and Methodology, Manufacturing and Construction Division. **Stacey Cole**, Chief of the Manufacturing Programs Methodology Branch, supervised the implementation of the methodologies. The sample design, estimation, and quality measures were developed by **Daniel Tulp Jr.**

Randy Becker, Senior Economist, Center for Economic Studies, provided empirical analyses and subject matter expertise on design and methodological matters.

The publication process was coordinated by **Arlinda Allen**, **Enid Winters**, **Harriet Lee**, and **Paula Capoen** under the supervision of **Nishea Quash**, Chief of the Census & Related Programs Support Branch.

The computer programs used to collect, tabulate, and impute the data were developed under the direction of **Edward Bates Jr.**, Assistant Chief for Current Indicators Programs, Economic Statistical Methods and Programming Division. The programs were developed by **Steven Potemkin**, **Nestor Baez**, and **Diane Musachio** under the supervision of **Kenneth Keer**, Chief, Manufacturing and Company Statistics Annuals Branch.

The Systems Support Division provided the table composition system. **Robert Joseph Brown**, Table Image Processing Systems (TIPS) Senior Software Engineer, was responsible for the design and development of the TIPS.

Catherine M. Raymond and **Steven McIntyre** of the Administrative and Customer Services Division, **Francis Grailand Hall**, Chief, provided publications and printing management, graphics design and composition, and editorial review for print and electronic media. General direction and production management were provided by **Claudette E. Bennett**, Assistant Division Chief, and **Wanda Cewis**, Chief, Publications Services Branch.

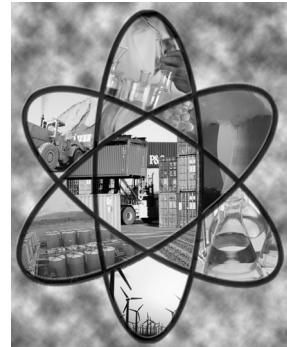

A special acknowledgment is due to the many businesses whose cooperation was essential to the success of this report.

Introduction

SUMMARY OF THE 2005 POLLUTION ABATEMENT COSTS AND EXPENDITURES (PACE) SURVEY RESULTS

Pollution abatement capital expenditures amounted to \$5,907.8 million in 2005. Of this total, \$3,112.7 million was attributed to treatment/capture, \$372.6 million to recycling, \$318.3 million to disposal, and \$2,104.2 million to prevention. Pollution abatement operating costs amounted to \$20,677.6 million. Of this total, \$10,762.8 million was attributed to treatment/capture, \$1,748.3 million to recycling, \$4,567.0 million to disposal and \$3,599.4 million to prevention.

Of the \$5,907.8 million capital expenditures, \$3,876.7 million was attributed to air emissions abatement, \$1,354.5 million to water discharge abatement and \$676.7 million to solid waste abatement. Of the \$20,677.6 operating costs, \$8,629.1 million was attributed to air emissions abatement, \$6,725.2 million to water discharge abatement and \$5,323.3 million to solid waste abatement.

Of the \$20,677.6 million operating costs, \$4,095.9 million was attributed to salaries, wages, and benefits; \$5,712.3 million to energy costs; \$2,811.2 million to materials and supplies; \$5,209.7 million to contract work, leasing, and other purchased services; and \$2,848.4 million to depreciation.

The industries with the highest capital expenditures in 2005 were subsector 324, Petroleum and coal products manufacturing, with \$1,743.0 million and subsector 325, Chemical manufacturing, with \$1,271.6 million. The industries with the highest operating costs in 2005 were subsector 325, Chemical manufacturing, with \$5,217.2 million and subsector 324, Petroleum and coal products manufacturing, with \$3,746.1 million.

The states with the highest capital expenditures in 2005 were Texas with \$1,168.5 million and Louisiana with \$488.8 million. The states with the highest operating costs were Texas with \$2,622.8 million and California with \$1,877.1 million.

SCOPE

The survey includes approximately 20,000 plants classified in manufacturing industries, with the exception of subsector 315 Apparel, defined by the 2002 North American Industry Classification System (NAICS). The survey excludes plants with less than 20 employees.

SURVEY DESCRIPTION

The data in this report are from the 2005 Pollution Abatement Costs and Expenditures Survey conducted by the U.S. Census Bureau under a joint partnership agreement with the U.S. Environmental Protection Agency (EPA). Survey content was developed by the EPA. The Census Bureau was the collection agency and produced the estimates in this report. The survey is based on a national probability sample of manufacturing plants. A detailed description of the sample design appears in Appendix C.

Data were obtained by means of a mailout/mailback form. The survey collects data on pollution abatement capital expenditures and operating costs, including treatment/capture, recycling, disposal, and prevention. It also includes data on the cost of abating air emissions, water discharges, and solid wastes, as well as data on permits and fees, site cleanup, product redesign, and cost offsets.

During the data review, all survey responses were subject to an editing process. This process is conducted to identify incomplete, inconsistent, or incorrect data provided by respondents. These edits, developed by the EPA, include logic, magnitude, and data verification.

Final estimates are based on response from approximately 75 percent of the survey panel.

SURVEY CHANGES AFFECTING HISTORIC COMPARISONS

The Pollution Abatement Costs and Expenditures (PACE) survey is the most comprehensive source of information on capital expenditures and operating costs associated with pollution abatement for facilities in the U.S. manufacturing industry. The Census Bureau conducted the PACE survey from 1973 to 1994. With guidance and financial support from the EPA, a substantially new version of the PACE survey was administered for reference year 1999. Because the 1999 PACE survey was different from the preceding surveys, longitudinal analysis was difficult. Conceptual differences include matters as fundamental as the scope and meaning of *pollution abatement* as well as the definition of *operating costs*. For more information on the differences between the 1999 PACE survey and previous PACE surveys, please visit: <<http://yosemite.epa.gov/ee/epa/eed.nsf/Webpages/PAGE2005.html>>.

The 2005 PACE survey and content is similar to the 1994 PACE survey, particularly in its intended definition of pollution abatement costs. However, the recognition of four

distinct pollution abatement activities (treatment/capture, prevention, recycling, and disposal) from the 1999 survey was also included in the 2005 survey. Because this is merely an additional partitioning of pollution abatement costs rather than a change in the scope of these costs, this should not impact historical comparability. The one significant change affecting longitudinal comparability was the decision to ask facilities to include benefits when reporting their pollution abatement labor costs, which has not been done historically. For more details regarding the redesign of the 2005 PACE survey, please visit: <<http://yosemite.epa.gov/ee/epa/eed.nsf/Webpages/PACE2005.html>>.

LIMITATIONS OF THE DATA

The survey estimates presented in this report are subject to both sampling and nonsampling errors. A detailed description of each appear in Appendix B.

QUESTIONS CONCERNING THIS REPORT

Please direct questions about the survey estimates in this report to the U.S. Census Bureau, Manufacturing and Construction Division, HQ-7K145, 4600 Silver Hill Road, Washington, DC 20233, or call the Special Studies Branch at 301-763-1907.

ABBREVIATIONS AND SYMBOLS

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual companies.
(NA)	Not available.
(X)	Not applicable.
(Z)	Less than half the unit shown.
NAICS	North American Industry Classification System.
PACE	Pollution abatement capital expenditures.
PAOC	Pollution abatement operating costs.
SCU	Site cleanup.
^a	Data cells with a level of imputation exceeding 50 percent.

Appendix A.

MA-200 Report Form and Instructions

The MA-200 form and instructions are shown on the following pages.

2005 SURVEY OF POLLUTION ABATEMENT COSTS AND EXPENDITURES (PACE)

Mail your completed form to:

U.S. CENSUS BUREAU
1201 East 10th Street
Jeffersonville, IN 47132-0001

Please read the accompanying instructions and definitions before completing the form.

Need help, a copy of the instructions, or have questions about filling out this form?

Visit our Web site at
www.census.gov/econhelp/pace

In correspondence pertaining to this report refer to the ID number (ID) (11 digits)

Please correct errors in name, address, and ZIP Code. ENTER street and number if not shown.

NOTICE – YOUR RESPONSE IS REQUIRED BY LAW (Title 13, United States Code). By section 9 of the same law, **YOUR REPORT IS CONFIDENTIAL**. It may be seen only by persons sworn to uphold the confidentiality of Census Bureau information and may be used only for statistical purposes. The law also provides that copies retained in your files are immune from legal process.

Item 1 FACILITY INFORMATION

A. Mark "X" the box that best describes the status as of December 31, 2005, of the facility identified in the address box above.

101 In operation as of December 31, 2005102 Temporarily idle (*intend to resume operations*)

Months

→ How long as of December 31, 2005?

103

106 Permanently ceased operations

→ Date closed?

Month Year

107

104 Sold or leased to another company

→ Date sold or leased?

Month Year

105

} SOLD OR LEASED TO

Name

Street

City

State ZIP Code

B. Is the time period covered by this report a calendar year?

110 Yes111 No – Enter time period covered →

From Month Year

112

To Month Year

113

CONTINUE WITH Item 1 ON PAGE 2.

**HOW TO
REPORT
DOLLAR
FIGURES**

Dollar figures should be **rounded to thousands** of dollars.

If a figure is **\$1,025,628.79**: **Report** →

If a value is "0" (or less than \$500.00). **Report** →

**Mark "X"
if less than
\$500.00**

\$Mil.	Thou.	Dol.
1	0	2
6		

Item 1 FACILITY INFORMATION – Continued

C. Report the following information for this facility in 2005.

1. Capital expenditures, including all outlays during the year for buildings and other structures, machinery, and equipment that are chargeable to the fixed asset account and for which depreciation or amortization reserves are maintained

**Mark "X"
if less than
\$500.00**

\$Mil.	Thou.	Dol.

2. Total value of products shipped, including interplant transfers, exports, and other receipts.

132

3. Total employment, including full- and part-time and leased employees.

**Mark "X"
if Zero**

Number
131 <input type="checkbox"/>

D. Mark "X" the box that best describes this facility's pollution abatement expenditures for 2005. *Include pollution abatement capital expenditures and operating costs for treatment, disposal, recycling and pollution prevention.*

120 These expenditures were \$0 in 2005. (*There were NO pollution abatement expenditures for 2005.*)

} Go to **Item 8**
on page 7.

121 These expenditures were included in rent, taxes, or lease agreements.

122 These expenditures were between \$1 and \$999.

123 These expenditures were more than \$999. → Go to **Item 2**
on page 3.

Item 2 POLLUTION ABATEMENT ACTIVITIES

A. In column (1), report the number of air pollution treatment control devices that were operating at the beginning of 2005. In column (2), report the number of newly installed devices during 2005. (See page 7 in the guidelines for instructions.)

Control Device	Mark "X" if Zero	(1) Total Number of Devices Operating Facility-Wide (Beginning of 2005)	(2) Number of Devices Newly Installed (During 2005)
1. Electrostatic precipitators (ESP)	201 <input type="checkbox"/>	214 <input type="checkbox"/>	
2. Baghouses	202 <input type="checkbox"/>	215 <input type="checkbox"/>	
3. Fabric filters	226 <input type="checkbox"/>	227 <input type="checkbox"/>	
4. Venturi scrubbers	203 <input type="checkbox"/>	216 <input type="checkbox"/>	
5. Non-Venturi wet scrubbers	228 <input type="checkbox"/>	229 <input type="checkbox"/>	
6. Acid-gas scrubbers	204 <input type="checkbox"/>	217 <input type="checkbox"/>	
7. Carbon adsorbers	205 <input type="checkbox"/>	218 <input type="checkbox"/>	
8. Incinerator/thermal oxidizers/ catalytic oxidizers	206 <input type="checkbox"/>	219 <input type="checkbox"/>	
9. Low-NOx burners	239 <input type="checkbox"/>	240 <input type="checkbox"/>	
10. Flares	207 <input type="checkbox"/>	220 <input type="checkbox"/>	
11. Process incinerators/boilers	253 <input type="checkbox"/>	284 <input type="checkbox"/>	
12. Refrigerated condensers	208 <input type="checkbox"/>	221 <input type="checkbox"/>	
13. Biofilter/bioreactor	209 <input type="checkbox"/>	222 <input type="checkbox"/>	
14. Selective non-catalytic reduction (SNCR)	210 <input type="checkbox"/>	223 <input type="checkbox"/>	
15. Selective catalytic reduction (SCR)	211 <input type="checkbox"/>	224 <input type="checkbox"/>	
16. Continuous Emissions Monitoring Systems (CEMS)	286 <input type="checkbox"/>	288 <input type="checkbox"/>	
17. Other	212 <input type="checkbox"/>	225 <input type="checkbox"/>	

→ *Describe -*
213

B. Mark "X" the water pollution abatement techniques that were used at this facility in 2005. (See page 7 in the guidelines for instructions.)

- 230 Physical (containing, screening, filtration, UV disinfection, underground injection, etc.)
- 231 Biological (activated sludge, aeration lagoon, biological filter, etc.)
- 232 Chemical (oxidation, reduction, neutralization, etc.)
- 233 Thermal (incineration, pyrolysis, etc.)

Gallons per year

- 1. What quantity of wastewater was treated **on-site?** 234
- 2. What quantity of wastewater was treated **off-site?** 235

C. Mark "X" the solid waste pollution abatement techniques that were used at this facility in 2005. (See page 7 in the guidelines for instructions.)

- 270 Physical (containment, dewatering, landfilling, underground injection, etc.)
- 271 Biological (composting, landfarming, phytoremediation, etc.)
- 272 Thermal (incineration, pyrolysis, etc.)

Indicate units.
(Mark "X" only one box.)

- 1. What quantity of solid waste was treated **on-site?** 273
- 2. What quantity of solid waste was disposed of
on-site? 274
- 3. What quantity of solid waste was disposed of
off-site? 278

- 275 Short tons
- 276 Other – *Describe ↗*
277

Item 3 POLLUTION ABATEMENT CAPITAL EXPENDITURES

Report the value of **TOTAL POLLUTION ABATEMENT CAPITAL EXPENDITURES** in **Item 3 B** below even if you are unable to provide separate values for each component of pollution abatement capital expenditures in **Item 3 A**.

- Report only the incremental capital expenditures for pollution abatement activities. (See page 5 in the guidelines for a discussion of "incremental" costs and page 8 for an example.)
- Include only the incremental cost of facility/process upgrades/modifications for which the primary purpose is pollution abatement. (See page 5 in the guidelines for a discussion of "primary purpose.")
- Include all installation and start-up costs for pollution abatement expenditures. Include labor only when contracted specifically for installation.
- Include capital expenditures related to monitoring and testing.
- Do NOT include pollution abatement capital expenditures from a previous year.
- Do NOT include depreciation. (Depreciation expenses should be reported in **Item 4 A5**.)
- Do NOT include capital expenditures related to site cleanup. (Site cleanup costs should be reported in **Item 5 B**.)
- Do NOT include capital expenditures related to product redesign or reformulation intended to reduce the pollution generated by consumers or users of products manufactured at this facility. (Product redesign and/or reformulation costs should be reported in **Item 5 C**.)

- A.** Report the value of pollution abatement capital expenditures by the following four activity categories for this facility in 2005. (See page 3 in the guidelines for definitions and pages 8 and 13–14 for examples.)

	Mark "X" if less than \$500.00	\$Mil.	Thou.	Dol.
1. Treatment/capture.....	301 <input type="checkbox"/>			
2. Recycling.....	302 <input type="checkbox"/>			
3. Disposal.....	303 <input type="checkbox"/>			
4. Pollution prevention	304 <input type="checkbox"/>			

- a.** Indicate which components are included in the POLLUTION PREVENTION value you reported in **Item 3 A4** above. (Mark "X" all that apply.) (See page 3 in the guidelines for definitions.)

- 305 Raw materials substitution or modifications
- 306 Leak and spill prevention
- 307 Process/equipment modification/redesign
- 308 Other

- B.** Add **Item 3 A1–4** to calculate TOTAL POLLUTION ABATEMENT CAPITAL EXPENDITURES in 2005. Report the value of TOTAL POLLUTION ABATEMENT CAPITAL EXPENDITURES even if you are unable to provide separate values for **Item 3 A1–4**.

TOTAL POLLUTION ABATEMENT CAPITAL EXPENDITURES	310 <input type="checkbox"/>	\$Mil.	Thou.	Dol.

- C.** What percentage of TOTAL POLLUTION ABATEMENT CAPITAL EXPENDITURES in **Item 3 B** was spent for each of the three types of media for this facility in 2005? (See page 3 in the guidelines for definitions and page 9 for instructions.)

	Mark "X" if Zero	Percent
1. Air emissions	321 <input type="checkbox"/>	%
2. Water discharges	322 <input type="checkbox"/>	%
3. Solid waste	323 <input type="checkbox"/>	%
4. Total		100 %

- D.** Report the gross book value (acquisition costs) of pollution abatement capital assets at your facility as of December 31, 2005 (adjusted for assets sold, retired, scrapped, and destroyed; not adjusted for depreciation charges). (See page 9 in the guidelines for a definition.)

GROSS BOOK VALUE OF POLLUTION ABATEMENT CAPITAL ASSETS	707 <input type="checkbox"/>	\$Mil.	Thou.	Dol.

Item 4 POLLUTION ABATEMENT OPERATING COSTS

Report the value of **TOTAL POLLUTION ABATEMENT OPERATING COSTS** in **Item 4 B** below even if you are unable to provide separate values for each component of pollution abatement operating costs in **Item 4 A**.

- Report only the incremental operating costs for pollution abatement activities. (*See page 5 in the guidelines for a discussion of "incremental" costs and page 9 for an example.*)
- Include operating costs related to monitoring, testing, and on-site administration costs associated with environmental protection.
- Do NOT include operating costs related to site cleanup. (*Site cleanup costs should be reported in Item 5 B.*)
- Do NOT include operating costs related to product redesign or reformulation intended to reduce the pollution generated by consumers or users from products manufactured at this facility. (*Product redesign and/or reformulation costs should be reported in Item 5 C.*)
- Cost offsets, such as revenue from recycling, should NOT be deducted from costs reported in this item. (*Cost offsets should be reported in Item 6 A.*)

- A.** Report the value of pollution abatement operating costs by the following five cost categories for this facility in 2005. (*See pages 9–12 in the guidelines for definitions and examples.*)

	Mark "X" if less than \$500.00	\$Mil.	Thou.	Dol.
1. Salaries, wages, and benefits (<i>for all time spent by professional, administrative, operating, and maintenance employees on pollution abatement activities</i>)	401 <input type="checkbox"/>			
2. Energy costs (<i>electricity, fuels, and other energy costs</i>)	402 <input type="checkbox"/>			
3. Materials and supplies (<i>treatment chemicals, catalysts, replacement parts, etc.</i>)	403 <input type="checkbox"/>			
4. Contract work, leasing, and other purchased services (<i>including payments to government for industrial sewage services and solid waste disposal, and recycling</i>)	404 <input type="checkbox"/>			
5. Depreciation	428 <input type="checkbox"/>			

- B.** Add **Item 4 A1–5** to calculate **TOTAL POLLUTION ABATEMENT OPERATING COSTS** in 2005. Report the value of **TOTAL POLLUTION ABATEMENT OPERATING COSTS** even if you are unable to provide separate values for **Item 4 A1–5**.

TOTAL POLLUTION ABATEMENT OPERATING COSTS	Mark "X" if less than \$500.00	\$Mil.	Thou.	Dol.
.	410 <input type="checkbox"/>			

- C.** What percentage of **TOTAL POLLUTION ABATEMENT OPERATING COSTS** in **Item 4 B** was spent for each of the following four pollution abatement activity categories for this facility in 2005? (*See page 3 in the guidelines for definitions and pages 13–14 for examples.*)

1. Treatment/capture	Mark "X" if Zero	Percent
.	421 <input type="checkbox"/>	%
2. Recycling	422 <input type="checkbox"/>	%
3. Disposal	423 <input type="checkbox"/>	%
4. Pollution prevention	424 <input type="checkbox"/>	%
5. Total		100 %

- a. Indicate which components are included in the **POLLUTION PREVENTION** value you reported in **Item 4 C4** above. (*Mark "X" all that apply.*) (*See page 3 in the guidelines for definitions.*)

- 425 Raw materials substitution or modifications
- 426 Leak and spill prevention
- 427 Process/equipment modification/redesign
- 428 Other

- D.** What percentage of **TOTAL POLLUTION ABATEMENT OPERATING COSTS** in **Item 4 B** was spent for each of the three types of media for this facility in 2005? (*See page 3 in the guidelines for definitions and page 12 for instructions.*)

1. Air emissions	Mark "X" if Zero	Percent
.	405 <input type="checkbox"/>	%
2. Water discharges	406 <input type="checkbox"/>	%
3. Solid waste	407 <input type="checkbox"/>	%
4. Total		100 %

Item 5 COSTS NOT INCLUDED IN PREVIOUS ITEMS

A. What were the total payments to government entities for PERMITS AND FEES related to pollution abatement for this facility in 2005? (See page 12 in the guidelines for instructions and page 14 for an example.) 501

Mark "X" if less than \$500.00	\$Mil.	Thou.	Dol.

B. What were the capital expenditures and operating costs for SITE CLEANUP for this facility in 2005? (See page 12 in the guidelines for instructions and page 14 for an example.)

1. Capital expenditures 503

Mark "X" if less than \$500.00	\$Mil.	Thou.	Dol.

2. Operating costs 505

C. What were the capital expenditures and operating costs related to PRODUCT REDESIGN or reformulation intended to reduce the pollution generated by consumers or users of products manufactured at this facility (*downstream pollutants*) in 2005? (See page 12 in the guidelines for instructions and page 14 for examples.)

1. Capital expenditures 507

Mark "X" if less than \$500.00	\$Mil.	Thou.	Dol.

2. Operating costs 509

Item 6 COST OFFSETS

Report the value of cost offsets for your facility in 2005. (See page 12 in the guidelines for instructions and page 14 for examples.)

- Include only cost offsets from activities whose primary purpose is pollution abatement.
- Include only cost offsets associated with the activities for the costs reported in **Item 4**.
- Do NOT include cost reductions from energy-efficiency improvements or revenue from recycling activities that are profitable in the absence of environmental concerns.

A. What was the total value of cost offsets for this facility in 2005?

COST OFFSETS 601

Mark "X" if less than \$500.00	\$Mil.	Thou.	Dol.

B. Which types of cost offsets were included in **Item 6 A** above? (Mark "X" all that apply.)

603 Revenue from recycling

604 Energy cost savings

605 Reduced material costs

606 Other – Describe:

607

Item 7 BURDEN

Estimate the number of hours spent filling out this form. Include the time you and all other staff spent reviewing the instructions, preparing the estimates and completing the survey form.

	Hours 801
--	--------------

Item 8 CERTIFICATION

A. Provide the following information on the person to contact regarding this survey.

Name of person to contact regarding this report <i>(Please print)</i>	Telephone		
	Area code	Number	Ext.
E-mail address	Fax number		

B. Provide the name, title and signature of the person who verifies that the information reported in this survey is to the best of their knowledge accurate. The authorizing official may be a plant manager, vice president, or environmental health and safety official.

Name of authorized manager <i>(Please print)</i>	Title
Signature of authorized manager	Date

Feel free to add any comments about the survey in the space provided below. Thank you for your participation.

FREQUENTLY ASKED QUESTIONS

What is the purpose of this survey?

This survey collects information on the pollution abatement costs and expenditures related to environmental protection at your specific facility in 2005. Pollution abatement includes treatment/capture, recycling, disposal, and pollution prevention. Pollution abatement costs and expenditures include new capital equipment, annual operating costs, and certain other expenses. The PACE survey only includes expenditures whose primary purpose is environmental protection.

How are these data used?

The Environmental Protection Agency (EPA) uses these data to calculate the costs of regulatory programs. Trade associations, manufacturers, marketing and research companies, universities, financial and environmental institutions, other federal agencies, state and local governments, and environmental reporters also use PACE data.

Is your response to this survey mandatory?

Yes. Responding to the PACE survey is required by law (Title 13, United States Code, Sections 131, 182, 193, 224, and 225). You may visit our website at www.access.gpo.gov/uscode/title13/title13.html.

Are my data kept confidential?

Yes. Section 9 of Title 13, United States Code, guarantees that your data are kept confidential. It may be seen only by persons sworn to uphold the confidentiality of Census Bureau information, and may be used only for statistical purposes. The law also provides that copies of your report retained in your files are immune from legal process. You may visit our website at www.census.gov/privacy/files/data_protection/004032.html.

What establishments fill out this form?

Manufacturing establishments. If you think that your facility is not a manufacturing facility, please call 301-763-1907.

Complete the survey only for the designated facility located at the address printed on the front of the survey form. If your company operates more than one facility, report only for the facility to which this survey was addressed. Do not combine responses with other facilities owned by your company even if operations jointly use the same pollution abatement equipment or staff. Include only corporate expenditures that are billed directly to your facility.

What is the reporting period for this survey?

Report data for the 2005 calendar year. If you cannot report 2005 calendar year data, report data for your 2005 fiscal year.

Where do I return the completed form?

Return your completed form in the enclosed prepaid envelope to:

U.S. Census Bureau
1201 East 10th Street
Jeffersonville, IN 47132-0001

If you need additional time to complete this form or if you need a duplicate form, please contact the U.S. Census Bureau at 1-800-528-3049.

What is the response burden for this survey?

The public reporting burden for this collection of information is estimated to average 8 hours per response. Send comments regarding the response burden estimate and any suggestions for minimizing respondent burden, to:

Paperwork Project 0607-0176
U.S. Census Bureau
4700 Silver Hill Road, Stop 1500
Washington, DC 20233-1500

Include the OMB control number in any correspondence. Do NOT send the completed form to this address. You may email comments to paperwork@census.gov; use "Paperwork Project 0607-0176" as the subject.

SURVEY DEFINITIONS

For this survey, please use the following definitions:

Facility is a single physical location where business is conducted or where services or industrial operations are performed. Facilities are often referred to as establishments or plants. A company may have one or more facilities. For this survey, report only for the designated facility located at the address printed on the front of the survey form. Do NOT include data for other facilities owned by the same company when responding to the survey questions.

Pollution is a substance in the environment that, because of its chemical composition or quantity, prevents the functioning of natural processes and produces undesirable environmental and/or human health effects. For this survey, report only for the pollutants generated by your facility's production process.

For this survey, pollution is divided into three types of media: air emissions, water discharges, and solid waste.

Air emissions are any substances released into the air that could, in high enough concentrations, pose a threat to the environment and/or human health.

Water discharges are any substances or pathogens released into water that could, in high enough concentrations, pose a threat to the environment and/or human health.

Solid waste includes any waste materials from the production process, including solid, semi-solid, contained liquids, and contained gaseous materials. It includes wastes produced as a result of air and water pollution abatement.

Pollution abatement activities are for the purpose of treating, capturing, reducing, eliminating, or disposing of pollution, as defined above. These activities may be in response to federal, state, or local regulations or voluntary initiatives. In addition to the cost of purchasing, installing, and operating pollution abatement equipment, all related **support activities**, including but not limited to monitoring and testing and environmentally-related administrative activities, are to be included in total pollution abatement capital expenditures and operating costs.

For this survey, pollution abatement is divided into four activities: treatment/capture, recycling, disposal, and pollution prevention.

Treatment/capture activities are any method, technique, or process designed to remove pollutants, **after** their generation in the production process, from air emissions, water discharges, or solid waste. In general, pollution treatment/capture activities include the use of retrofit technologies, such as baghouses, thermal oxidizers, and oil/water separators. Treatment/capture activities also include those activities designed to change the physical, chemical, or biological character or composition of any pollutant prior to disposal or release into the environment.

Recycling activities are the postproduction on-site or off-site processing of waste for an alternative use. Recycling activities include the recovery of liquid, solid, or gaseous wastes and their reuse in the same or another production process. Recycling activities also include the partial reclamation of materials (e.g., metal recovery or the burning of flammable wastes for energy recovery). For this survey, recycling only includes activities whose primary purpose are pollution abatement and NOT activities motivated by profit.

Disposal activities involve the final placement, destruction, or disposition of waste after pollution treatment/capture and/or recycling has occurred. Disposal, in an environmentally-sound manner, can include landfill disposal or the use of injection wells. To the extent possible, do not report disposal expenditures associated with waste generated outside the production process, such as office and cafeteria trash, and sanitary sewage. If you are unable to exclude these costs, report all disposal costs.

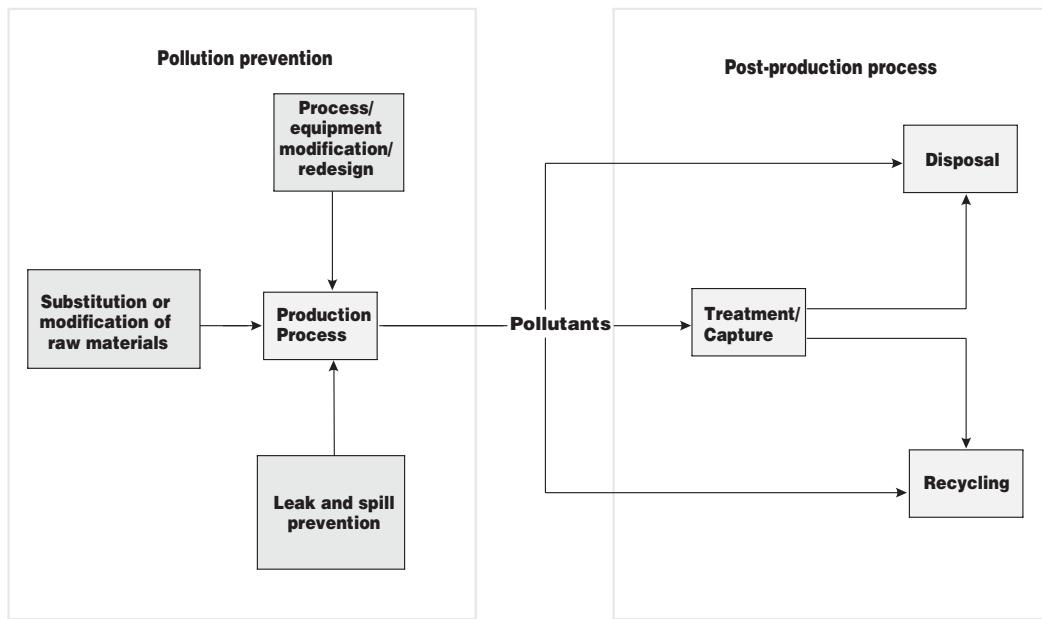

Pollution prevention activities are any method, technique, or process that reduces the amount of pollution generated during the production process. Pollution prevention activities can include various equipment and technology modifications; process and procedure modifications; reformulations and redesigns of products (to reduce pollution generated by the manufacturing process); substitutions toward less-polluting raw materials and fuels; and improvements in housekeeping, maintenance, training, and inventory control that result in fewer air emissions, water discharges, or solid waste. The cost of activities involving the redirection of "used" material inputs back into the production process (such as closed-cycle systems) should also be included in pollution prevention if the primary purpose of this activity is pollution abatement rather than to increase profit.

For this survey, pollution prevention activities are grouped into three primary categories:

- **Raw materials substitution or modifications** are activities that alter inputs or allow the use of alternative inputs in order to reduce or modify pollutants during the manufacturing process.
- **Leak and spill prevention** are improvements in housekeeping, maintenance, training, and inventory control that result in fewer accidental releases of polluting raw materials, products, or by-products.
- **Process/equipment modification/redesign** includes equipment and technology modifications, process and procedure modifications, reformulations and product redesigns, and in-process recycling to reduce pollution from the manufacturing process.

As shown in Figure 1, a general distinction between pollution prevention and the other pollution abatement activities is that pollution prevention reduces or eliminates pollutants generated **during** the production process, while treatment/capture, recycling, and disposal are post-production activities used to manage pollutants **after** their generation by the production process.

Figure 1. Overview of Pollution Abatement Activities

GENERAL INSTRUCTIONS

Complete this form only for your facility. If your company operates more than one facility, report only for the facility to which this survey was addressed. Do not combine responses with other facilities owned by your company even if operations jointly use the same pollution abatement equipment or staff. Include only corporate expenditures that are billed directly to your facility.

Report the value of total pollution abatement costs (Items 3B and 4B) even if you are unable to report the values of each separate cost component.

Report actual costs whenever possible. If an actual cost is not available, estimate the cost. Possible sources for your estimate can include accounting records or engineering estimates.

Example: If estimated operating costs were provided by a pollution control device vendor as part of an investment proposal, these estimated operating costs could be used to help determine that portion of your facility's operating costs attributable to pollution abatement.

Example: If electricity usage for pollution abatement air handling units is not metered separately, use information on the number of motors and total horsepower to estimate that portion of your facility's energy costs attributable to pollution abatement.

Report only incremental capital expenditures and incremental operating costs associated with pollution abatement activities. Incremental costs of pollution abatement are the additional costs associated with the *environmental portion* of an investment or of annual operating and maintenance costs. For example, pollution abatement equipment may be integrated into larger investment projects, pollution abatement technologies may be integrated into production equipment, or pollution abatement operating costs may be combined with other costs in a larger cost center. Estimate and report only the portion of capital expenditures and operating costs related to pollution abatement, as illustrated in the examples on pages 8-10 and pages 13-14.

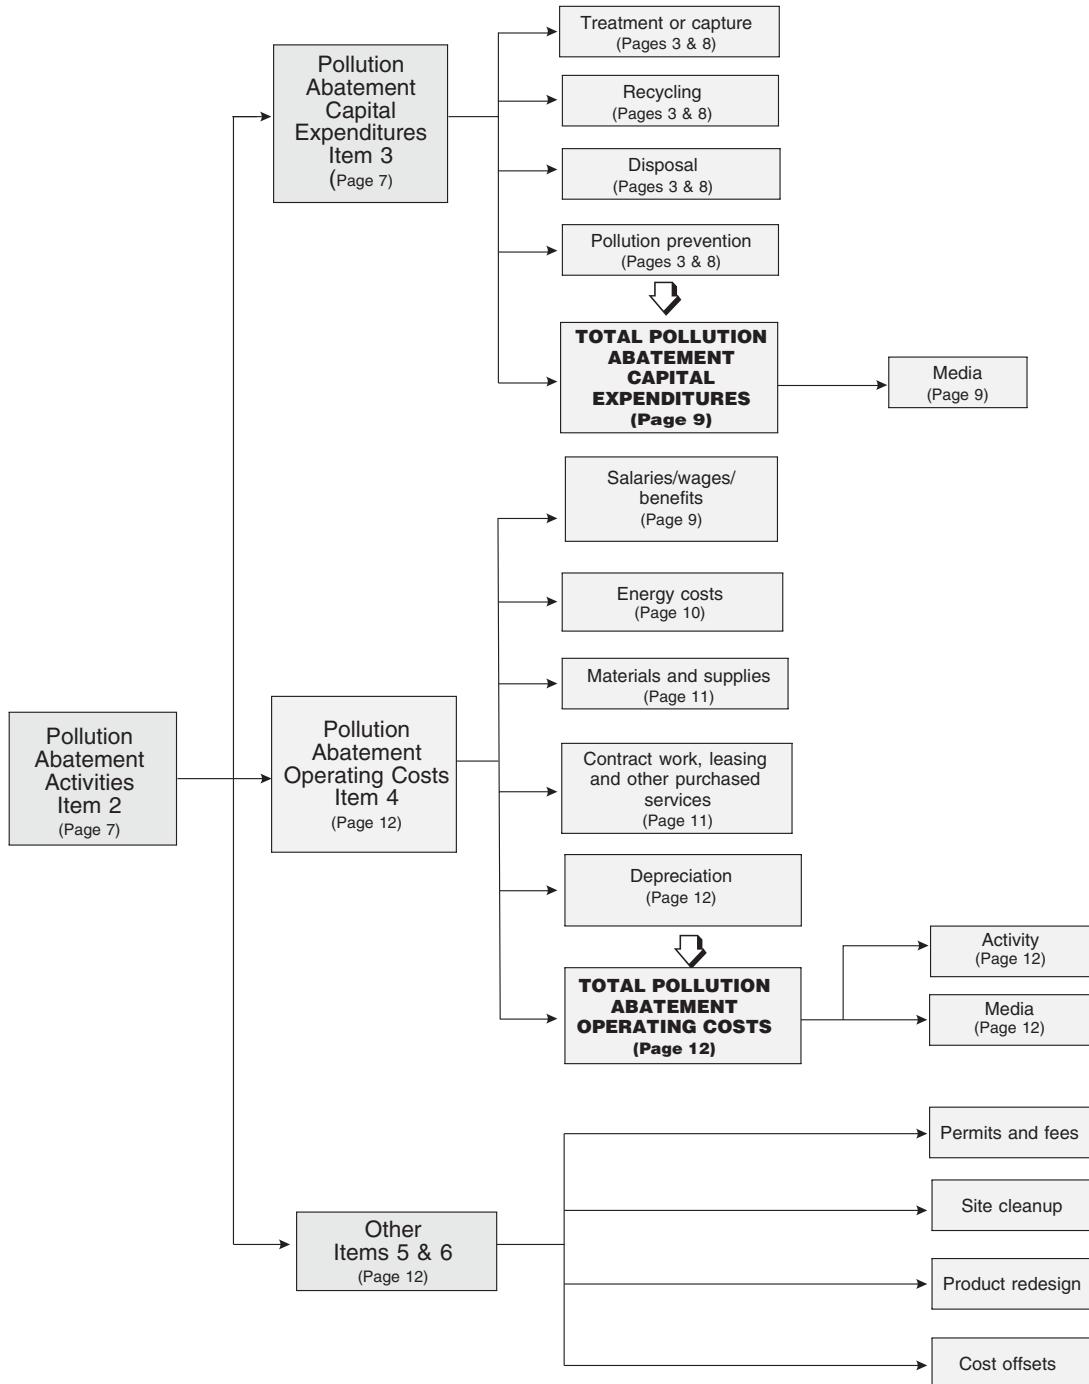

For this survey, include only those expenditures with the primary purpose of pollution abatement. Although certain expenditures may have multiple benefits, only consider those expenditures for which pollution abatement is the primary purpose. Investments or activities that increase profits or efficiency in the absence of environmental considerations should not be included, even if pollution abatement occurs as a side benefit. For example, some pollution prevention practices, particularly process modifications, may have been undertaken primarily as a cost-cutting activity. However, if any portion of an investment or activity can be specifically identified as pollution abatement, then those costs *should* be reported in this survey.

The following are general examples of costs and expenditures to be excluded from this survey:

- activities that are motivated by profit and whose primary purpose is not pollution abatement;
- costs that did not occur in 2005;
- corporate expenditures for pollution abatement that are NOT directly billed to your facility;
- activities related to health, safety, aesthetics, and employee comfort (OSHA); and
- habitat protection.

Round all cost estimates to the nearest thousands of dollars. If expenditures were less than \$500.00 for a specific item, then mark the appropriate box.

Figure 2. Overview of the Survey Structure

Note: Page numbers provide links to definitions and examples.

ITEM BY ITEM INSTRUCTIONS

The PACE survey has eight items. Item 1 asks about your facility. Item 2 asks about your facility's pollution abatement activities. Items 3–6 ask about your facility's pollution abatement costs including capital expenditures, operating costs, costs not included in previous items, and cost offsets. Item 7 asks about the amount of time spent completing this form. Item 8 is the survey certification. Figure 2 provides an overview of the survey's main items.

Item 1: Facility Information

See the survey form.

Item 2: Pollution Abatement Activities

Item 2A asks about your facility's air pollution control devices in operation in 2005. This item has two columns: (1) one column for the total number of control devices in operation at the beginning of 2005, and (2) one column for the total number of control devices newly installed in 2005. If your facility uses air pollution control devices that are not listed, then write in those devices under "other" and report the number of devices.

Example: A facility operates five continuous emissions monitoring systems (CEMS) to measure sulfur dioxide. Four monitors were installed in 1990 and one was installed in 2005. On line 16 (Continuous Emission Monitoring Systems), the facility should report '4' in column (1) and '1' in column (2).

For this item, **Process incinerators/boilers** (line 11) are devices that treat air emissions using a boiler or other combustion device. These devices are primarily installed to provide heat or steam but can also be used as an air pollution control device.

Example: A facility routes air emissions generated during the manufacturing process to (1) a coal-fired boiler, that primarily is used to produce heat and steam for the manufacturing process, and (2) a rotary kiln that is used to produce lime. Both the boiler and kiln began operation prior to 2005. On line 11 (Process incinerators/boilers), the facility should report '2' in column (1) and mark the zero box in column (2).

Item 2B asks you to report a value for the quantity of wastewater treated on-site and off-site during 2005.

Example: A facility generates 10 million gallons of wastewater per day, for a total of 3.65 billion gallons per year. Sixty percent of the wastewater is treated by the facility and is discharged into a nearby river, while the other forty percent is sent to a municipal wastewater treatment plant. The facility should report 2.19 billion gallons per year for "treated on-site" and 1.46 billion gallons per year for "treated off-site".

Item 2C asks you to report a value for the quantity of solid waste treated on-site, disposed of on-site, and disposed of off-site during 2005.

Example: A facility generates 100,000 tons of solid waste per year: 90,000 tons of wastewater treatment sludge and 10,000 tons of boiler ash. Approximately 50,000 tons of the wastewater treatment sludge is burned in an on-site boiler as fuel. The remaining 40,000 tons is disposed of in an on-site landfill. A contractor is paid to remove the boiler ash and recycles some of it for metals. The facility should report 50,000 tons per year for "treated on-site", 40,000 tons per year for "disposed of on-site", and 10,000 tons per year for "disposed of off-site", even though some of the ash is being recycled.

For this survey, *beneficial reuse* is the reuse of solid material generated by the manufacturing and/or pollution abatement process that would otherwise be considered a solid waste. Co- or by-products *sold* for beneficial reuse should not be included in this item.

Example: A facility generates 60,000 tons per year of wastewater treatment sludge that contains some usable raw material. Approximately 3,000 tons of the sludge is recycled and sold for profit; 27,000 tons is disposed of in an on-site landfill; and 30,000 tons is sent to another facility that uses the sludge as a raw material to manufacture a new product. The facility also produces 2 tons per year of hazardous waste that is sent off-site for disposal. The facility should report 27,000 tons per year as "disposed of on-site" (landfilled) and 2 tons per year as being "disposed of off-site". (Neither the 3,000 tons nor the 30,000 tons should be reported in these items because they are disposed of at no cost to the facility.)

Item 3: Pollution Abatement Capital Expenditures

Pollution abatement capital expenditures include any installation or retrofit of structures or equipment that occurred during 2005 with the primary purpose of treating, capturing, recycling, disposing, and preventing pollutants. These expenditures are often referred to as "one-time costs" and include total expenditures for equipment installation and startup.

For this item, report only those pollution abatement capital expenditures made during 2005, not the final equipment value or the total project budget. Report only the incremental costs associated with pollution abatement. (See page 5 for the definition of incremental costs.) If pollution abatement capital expenditures are not budgeted or tracked separately for some projects, *estimate* the portion of total capital expenditures associated with pollution abatement.

Example (incremental pollution abatement capital expenditures): A facility operates a rotary material dryer that is equipped with a multiclone and an electrostatic precipitator (ESP) at the dryer exhaust. The multiclone, ESP, and an emissions stack were installed at the same time as part of a dryer system upgrade in 2005. The total capital expenditures for the multiclone/ESP system (including the emissions stack) is \$8 million as follows:

- \$1.8 million for the multiclone
- \$5.2 million for the ESP
- \$1.0 million for the emissions stack

The ESP and stack were installed to comply with state and federal air emissions standards. The ESP reduces particulate emissions that remain in the air stream exiting the multiclone. The primary purpose of the multiclone is to separate the dried material from the air; thus, the multiclone is considered an integral part of the dryer process and is necessary in the absence of environmental regulations. Therefore, the facility should only report the total cost of the ESP and the stack. Since this upgrade is a treatment/capture activity, \$6.2 million should be included in Item 3A1. It should also be included in total pollution abatement capital expenditures (Item 3B) and pollution abatement capital expenditures for air emissions (Item 3C1).

Item 3A: Activity Categories (Treatment/Capture, Recycling, Disposal, Pollution Prevention)

The following table provides examples of pollution abatement capital expenditures by activity category. (See page 3 for definitions of these activity categories.) Capital expenditures associated with **testing and monitoring** should be distributed across some or all of the activity categories, as appropriate. Capital expenditures to be excluded are also listed below. Note: Do NOT include capital expenditures related to site cleanup or product redesign/reformulation (these expenditures are to be reported in Item 5). Note also that these lists are intended as examples and are not necessarily exhaustive.

Activity Category	Examples of Pollution Abatement Capital Expenditures	Capital Expenditures to be Excluded
Treatment and capture	Purchase, installation, and startup costs of "end of pipe" pollution abatement equipment, such as baghouses, scrubbers, absorbers, and flares Oil/water separating systems Dewatering systems, compactors, and balers	Manufacture of pollution treatment equipment for sale Equipment installed for the purpose of increasing profits or efficiency Interest for financing pollution abatement capital expenditures Improvements for health, safety, aesthetics, or employee comfort (OSHA) Equipment related to site cleanup [report in Item 5B1] Facilities or equipment for research and development
Recycling	Water filter systems to recover waste to be reused for its material value Air handling and injection systems for the capture and use of waste gas with energy value	Capital equipment if your primary product is recycling; that is, you are a recycling plant Recycling equipment when the primary motivation is profit
Disposal	Purchase of material handling equipment Construction of on-site landfills Construction of waste storage facilities or retention ponds	Equipment purchased by an on-site contractor (who manages all solid waste handling at the facility) that is not billed directly to the facility
Pollution prevention	Installation of low NO _x burners Equipment modifications to burn lowsulfur coal Closed-cycle water systems Cost of leak prevention and monitoring equipment Storage and delivery systems for environmentally-friendly inputs The pollution abatement portion of production process enhancements, such as increased energy efficiency or lean manufacturing, intended for environmental protection	Purchase of new equipment that is more energy efficient and thus, theoretically would reduce offsite pollution at the local utility as a result of lower electricity production Equipment and structures related to product redesign or reformulation intended to reduce the pollution generated by the consumers or users of the facility's products (downstream pollutants), such as reformulated gasoline [report in Item 5C1]

Item 3B: Total Pollution Abatement Capital Expenditures

See the survey form.

Item 3C: By Pollution Medium (Air, Water, and Solid Waste)

In **Item 3C**, divide your total pollution abatement capital expenditures into three media types: air emissions, water discharges, and solid waste. (See page 3 for definitions of these pollution media.) For capital expenditures that affect multiple media categories, assign the costs across individual media categories to the best of your ability.

Example: During 2005, a facility purchases and installs an electrostatic precipitator (ESP) at a cost of \$6.5 million, replaces a continuous emissions monitor (CEMS) for sulfur dioxide (SO_2) at a cost of \$125,000, replaces two aerators in its wastewater aeration lagoon at a cost of \$30,000 each, and purchases a new excavator for dredging out an on-site ash pond at a cost of \$220,000. These costs should be categorized as follows:

Equipment	Capital Expenditures	Pollution Abatement Medium
ESP	\$6,500,000	96% of costs for air emissions
SO_2 CEMS	\$125,000	
Aerators	\$60,000	
Excavator	\$220,000	3% of costs for solid waste
TOTAL	\$6,905,000	100%

Item 3D: Gross Book Value of Pollution Abatement Capital Assets

Item 3D asks you to report your facility's gross book value of pollution abatement capital assets as of December 31, 2005. This is the sum of the purchase prices of all pollution abatement equipment installed as of December 31, 2005. For this item, adjust for assets sold, retired, scrapped, and destroyed; however, do not adjust for depreciation charges.

Item 4: Pollution Abatement Operating Costs

Pollution abatement operating costs include all annual costs (such as salaries and benefits, costs of materials and energy, contract work, and the operation, maintenance, and depreciation of capital assets) that occurred during 2005 with the primary purpose of treating, capturing, recycling, disposing, and preventing pollutants.

For this item, report only the incremental costs associated with pollution abatement. (See page 5 for definition of incremental costs.) If pollution abatement operating costs are not budgeted or tracked separately for some categories, estimate the portion of total costs associated with pollution abatement.

Example (incremental pollution abatement operating costs): A facility's manufacturing process requires \$100,000 per year in labor costs and \$10,000 in solvents (materials). However, because of environmental regulations (or other environmental concerns), labor costs increase to \$125,000 per year and material costs increase to \$15,000 because of a switch from oil-based to water-based solvents. As a result, the facility should report the following incremental pollution abatement operating costs:

- \$25,000 – Salaries, wages, and benefits (Item 4A1)
- \$5,000 – Materials and supplies (Item 4A3)
- \$30,000 – Total pollution abatement operating costs (Item 4B).

Do NOT include, in any of these categories, costs associated with site cleanup or product redesign/reformulation. Also, do NOT include the cost of permits and fees. These costs are to be reported in Item 5 of the survey.

Item 4A: Cost Categories (Labor, Energy, Materials, Contract Work, Depreciation)

In **Item 4A**, total pollution abatement operating costs are divided into five cost categories: salaries, wages, and benefits; energy costs; materials and supplies; contract work, leasing, and other purchased services; and depreciation.

Salaries, wages, and benefits include staff time associated with pollution abatement activities. Report the salaries and wages you use for calculating the withholding tax, plus benefits. Salaries, wages, and benefits to be included and excluded in Item 4A1 are listed below. Note that these lists are intended as examples and are not necessarily exhaustive.

<p><i>Include salaries, wages, and benefits for</i></p> <ul style="list-style-type: none"> • The share of time environmental managers and engineers spend on pollution abatement activities • The share of time production and maintenance staff spend on pollution abatement activities, including the operation and maintenance of pollution abatement equipment • Staff time spent performing on-site disposal and recycling • Staff time spent on leak detection programs • Staff time for permit preparation and meetings with environmental regulators • Staff time for environmental auditing and plant certification (such as ISO 14000) • Staff time spent on completing environmental reporting requirements • Staff time spent conducting environmental studies for development or expansion 	<p><i>Exclude salaries, wages, and benefits for</i></p> <ul style="list-style-type: none"> • Environmental staff at corporate headquarters. If billed directly to your facility, report those costs in Item 4A4 (contract work). • Research and development activities
---	--

Example (salaries, wages, and benefits): During 2005, a facility employs 3 full-time staff and 1 wastewater treatment operator in its environmental department. (The facility's solid waste management activities, including an on-site landfill, are managed by a contractor.) The facility also employs 1 lab technician who is responsible for performing sampling and testing of wastewater and sludge, which requires about 2 hours of labor each day. The facility also operates 5 air pollution control devices, each of which requires about 10 hours of labor each week to operate and maintain (by production staff). The annual salary for each of the 3 full-time staff and 1 wastewater treatment operator is \$80,000. The lab technician's wage is \$30 per hour, and the production workers' wages average about \$20 per hour. All salaries are multiplied by 35 percent to account for benefits. Therefore, the total salaries, wages, and benefits for pollution abatement are estimated to be:

Environmental department staff: $4 \times (\$80,000/\text{year}) \times 1.35 = \$432,000 \text{ per year}$

Lab technician wages: $(2 \text{ hours/day}) \times (365 \text{ days/year}) \times (\$30/\text{hour}) \times 1.35 = \$29,565 \text{ per year}$

Operator wages: $(10 \text{ hours/week}) \times (5 \text{ devices}) \times (52 \text{ weeks/year}) \times (\$20/\text{hour}) \times 1.35 = \$70,200 \text{ per year}$

TOTAL: **\$532,000** per year (rounded to nearest thousand)

Energy costs include electricity, fuels (oil, natural gas, coal), and other energy costs. This includes both fuel and power for operating pollution abatement equipment as well as the incremental costs associated with the purchase of environmentally-friendly fuels. (See page 5 for definition of incremental costs.) If pollution abatement energy costs are not metered or tracked separately from facility-wide energy costs, estimate the portion of total energy costs associated with pollution abatement. Energy costs to be included and excluded in Item 4A2 are provided below. Note that these lists are intended as examples and are not necessarily exhaustive.

<p><i>Include energy costs for</i></p> <ul style="list-style-type: none"> • Electricity for operating pollution abatement equipment, such as baghouses, scrubbers, ESPs, wastewater treatment pumps and aerators, etc. • Fuel costs for thermal oxidizers installed for air pollution control • Electricity generated on-site that is used by pollution abatement equipment • Difference in costs (incremental costs) resulting from the use of a more environmentally-friendly fuel (such as low-sulfur coal) 	<p><i>Exclude energy costs for</i></p> <ul style="list-style-type: none"> • Fuel costs for boilers that operate primarily to provide steam/heat/electricity for the production process, but are also used to incinerate air emissions • Electricity costs associated with production equipment
--	--

Example (incremental fuel costs): A facility purchases 1,000 tons of coal per year. To lower its emissions it purchases low-sulfur coal at \$30 per ton instead of higher sulfur coal available at \$20 per ton. The pollution abatement energy costs associated with the purchase of the low-sulfur coal are:

$(1,000 \text{ tons/year}) \times (\$10 \text{ incremental cost/ton}) = \$10,000 \text{ per year}$

Example (estimating energy costs): A facility does not track pollution abatement electricity costs separately from total facility-wide electricity costs. Therefore, the facility must estimate electricity costs for pollution abatement. Based on information found in equipment manuals, the facility knows that the total horsepower (hp) requirement for the wastewater

treatment system pump is 760 hp. The on-site wastewater treatment facility also includes 25 aerators, each rated at 75 hp, for a total of 1,875 hp. The air pollution control devices and associated fans and pumps have a total horsepower requirement of 1,475 hp. The facility operates 365 days per year, 24 hours per day, and pays an average industrial electricity rate of \$38.77 per megawatt-hour (MWh). (Note: 1 MW = 1,341 hp.) The facility also operates a thermal oxidizer that uses 100 million cubic feet (ft³) of natural gas per year at a cost of \$6.41 per 1,000 ft³. Therefore, the total energy costs for pollution abatement are estimated as follows:

$$\text{Total electricity usage for pollution abatement} = 760 + 1,875 + 1,475 = 4,110 \text{ hp}$$

$$\text{Total electricity usage in MWh per year} = (4,110 \text{ hp}) \times (365 \text{ days/year}) \times (24 \text{ hours/day}) \times (1 \text{ MW} / 1,341 \text{ hp}) = 26,848 \text{ MWh per year (rounded)}$$

$$\text{Total electricity cost for pollution abatement} = (26,848 \text{ MWh/year}) \times (\$38.77/\text{MWh}) = \$1,041,000 \text{ per year (rounded)}$$

$$\text{Total fuel (natural gas) cost for pollution abatement} = (100,000,000 \text{ ft}^3) \times (\$6.41/1,000 \text{ ft}^3) = \$641,000 \text{ per year}$$

$$\text{Total energy costs for pollution abatement} = \$1,041,000 + \$641,000 = \boxed{\$1,682,000}$$

Note: If you do not have horsepower information with which to derive pollution abatement electricity costs, estimate the portion of your facility's total electricity costs associated with pollution abatement. If your electricity is generated on-site, estimate the portion of this self-generated electricity used by pollution abatement equipment and value this electricity at the appropriate or average market price of electricity in your region.

Materials and supplies include the delivered cost of materials, parts, and components used as operating supplies for pollution abatement or in the repair and maintenance of pollution abatement capital assets. In addition, this includes the incremental costs associated with the purchase of environmentally-friendly materials and supplies. (See page 5 for definition of incremental costs.) Materials and supplies to be included and excluded in Item 4A3 are provided below. Note that these lists are intended as examples and are not necessarily exhaustive.

<i>Include material and supply costs for</i>	<i>Exclude material and supply costs for</i>
<ul style="list-style-type: none"> • Parts for pollution abatement equipment maintenance and repair • Wastewater treatment chemicals • Caustic used in wet scrubbers • Laboratory chemicals and supplies used for sampling and testing for environmental compliance • Difference in costs (incremental costs) resulting from the use of a more environmentally-friendly raw material (such as a switch from oil-based to water-based solvents) 	<ul style="list-style-type: none"> • Laboratory chemicals used for testing products in various stages of the manufacturing process • Use of a new raw material that reduces pollution but is <i>less</i> expensive than the raw material it replaces

Contract work, leasing, and other purchased services include payments made to private and public service providers for both on-site and off-site pollution abatement activities, as well as leasing costs for capital equipment associated with pollution abatement. Also include pollution abatement expenditures by your corporate headquarters on behalf of your facility, but only if those expenditures are billed directly to your facility. Costs to be included and excluded in Item 4A4 are provided below. Note that these lists are intended as examples and are not necessarily exhaustive.

<i>Include contract and purchased service costs for</i>	<i>Exclude contract and purchased service costs for</i>
<ul style="list-style-type: none"> • Collection and disposal of waste created by the production process, by a private contractor • Sewage and solid/contained waste collection and disposal paid to federal, state, or local governments • Management of an on-site (industrial) landfill, by a private contractor • Pollution abatement activities performed by your corporate headquarters that WERE billed directly to your facility • All costs that would be included in Item 4A1 if the activity were done by your own staff • Air emissions and water discharge testing services • Off-site laboratory analysis of water samples • Leasing of capital equipment used for pollution abatement purposes 	<ul style="list-style-type: none"> • Collection and disposal of office and cafeteria waste (If you cannot separate from costs for industrial waste, report the entire amount) • Sanitary sewage (If you cannot separate from costs for industrial wastewater, report the entire amount) • Research and development services • Pollution abatement activities performed by your corporate headquarters that WERE NOT billed directly to your facility • Environmental permits, fees, fines, penalties, taxes, and contributions • Legal fees

Depreciation is related to capital expenditures (in Item 3) but is reported in this section of the survey. In Item 4A5, report year-end accumulated depreciation and amortization charges for depreciable assets used in pollution abatement activity. Include charges against depreciable pollution abatement equipment acquired during the year as well as any charges against pollution abatement equipment sold or retired during the year. Depreciation and amortization charged during the year is attributed to the wear and tear on equipment and structures as well as obsolescence due to changing technology. At the end of the expected life of an asset, the entire cost of the asset will have been depreciated.

Item 4B: Total Pollution Abatement Operating Costs

See the survey form.

Item 4C: By Activity Categories (Treatment/Capture, Recycling, Disposal, Pollution Prevention)

In **Item 4C**, divide your total pollution abatement operating costs into the four major activity categories: treatment/capture, recycling, disposal, and pollution prevention. (See page 3 for definitions of these activity categories as well as the examples in Item 3A on page 8.) Operating costs associated with **testing and monitoring** should be distributed across some or all of the activity categories, as appropriate. Do NOT include the costs of permits and fees or the operating costs associated with site cleanup and product redesign/reformulation (these costs are to be reported in Item 5).

Item 4D: By Pollution Medium (Air, Water, and Solid Waste)

In **Item 4D**, divide your total pollution abatement operating costs into three media types: air emissions, water discharges, and solid waste. (See page 3 for definitions of these pollution media.) For operating costs that affect multiple media categories, assign the costs across individual media categories to the best of your ability.

Item 5: Costs Not Included in Previous Items

In **Item 5A, permits and fees** include payments to local, state, and federal government agencies for permits and fees associated with pollution from your production process (e.g., Title V permit fees; emission fees). For this item, do NOT include the cost of tradable permits or emission credits. Also, do NOT include fines, penalties, or contributions. Do NOT include the labor costs or contract work associated with permit preparation; these costs should be reported in Item 4. (See example on page 14.)

In **Item 5B, site cleanup** includes expenditures and costs related to the remediation of contamination due to leaks, spills, waste disposal, or other releases from current or past production activities. Also include the costs of site assessment, sampling, and analyses associated with the site cleanup. The pollution must be on the site of the designated facility located at the address printed on the front of the survey form. (See example on page 14.)

In **Item 5C, product redesign** includes expenditures and costs of product reformulation intended to reduce the pollution generated by consumers or users of this facility's products. This is also referred to as downstream pollutants. Examples of product redesign include reformulated gasoline and the reformulation of paint from oil-based to latex. In both cases, emission reductions occur at the point where the product is used, not at the facility where it is produced. Costs associated with the redesign and reformulation of products to reduce pollution at the manufacturing facility should NOT be included here; these costs should be reported under pollution prevention in Items 3 and 4 above. (See examples on page 14.)

Item 6: Cost Offsets

Cost offsets are related to operating costs (in Item 4) but are reported in this section of the survey. Cost offsets are operating expenses recovered as a result of pollution abatement activities. Cost offsets are usually the value of recovered/recycled materials or recovered energy. Cost reductions from such waste minimization/recycling and energy recovery should be reported here, but only if these activities were motivated by pollution abatement and NOT by production efficiency or profit. That is, revenues from recycling and cost savings from reduced material or fuel purchases should NOT be included if these activities are profitable in the absence of environmental concerns. (See examples on page 14.)

Item 7: Burden

See the survey form.

Item 8: Certification

See the survey form.

ADDITIONAL EXAMPLES

This section provides additional examples of pollution abatement activities and projects and indicates how they relate to the items and definitions in this survey.

Treatment/Capture

- A facility installs an electrostatic precipitator (ESP) to reduce particulate matter (PM) emissions from one of its production units. The facility also installs a continuous opacity monitoring system (COMS) at the outlet of the ESP to monitor opacity (as a surrogate for PM emissions). The total capital expenditure on the ESP (including installation, fans, and ductwork, for example) and the COMS should be included in the **pollution abatement capital expenditures** for treatment/capture. The costs associated with operating the ESP and the COMS (e.g., electricity costs to run the ESP and COMS and labor involved in collecting and reporting COMS data) should be included in the **pollution abatement operating costs (labor, energy, materials, contract work, depreciation)** for treatment/capture.
- A facility installs a new flotation clarifier as part of its on-site wastewater treatment unit. All capital expenditures associated with the purchase, installation, and start-up of the new clarifier should be included in the **pollution abatement capital expenditures** for treatment/capture. All costs associated with operating the new clarifier (e.g., cost of electricity to run the compressor, cost of flocculating chemicals) plus the costs for operating the other wastewater treatment equipment should be included in the **pollution abatement operating costs (labor, energy, materials, contract work, depreciation)** for treatment/capture.
- A facility hires an environmental consulting company to conduct an emission source test to measure air pollutant emissions from the facility's control device. The contractor costs associated with conducting this source test should be included in **pollution abatement operating costs (contract work)**. The labor costs for facility personnel to supervise and assist in conducting this source test should be included in **pollution abatement operating costs (salaries, wages, and benefits)**.

Recycling

- A facility installs and operates equipment used to recycle its waste streams in order to comply with environmental regulations or for other environmental reasons. Costs associated with installing this equipment (e.g., purchased equipment, required engineering, site preparation, installation, and other associated costs) should be included in **pollution abatement capital expenditures** for recycling. All costs associated with operating and maintaining the equipment should be included in **pollution abatement operating costs (labor, energy, materials, contract work, depreciation)** for recycling.

Disposal

- A facility constructs a new on-site landfill for the disposal of its solid waste. All costs associated with constructing the landfill (including the equipment and machinery necessary for managing the landfill) should be included in **pollution abatement capital expenditures** for disposal.
- A facility generates solid waste from several sources, including sludge from an on-site wastewater treatment operation and scrap metal generated during the manufacturing process. All of the solid waste is sent to an on-site landfill that is operated by a contractor. The payments to the contractor should be included in **pollution abatement operating costs (contract work)** for disposal.
- A facility hires an outside contractor to periodically pick up spent process catalyst for disposal. Contract fees for this disposal should be included in **pollution abatement operating costs (contract work)** for disposal.
- A facility pays its local government to accept its industrial wastewater at a public water treatment facility. These payments should be included in **pollution abatement operating costs (contract work)** for disposal.

Pollution Prevention

- A facility switches to a new, more expensive raw material that either contains fewer pollutants or releases fewer pollutants when used in the production process. To accommodate the use of this new raw material, the facility must make some slight modifications to its production process and manufacturing equipment. The costs associated with the equipment modifications should be included in **pollution abatement capital expenditures** for pollution prevention. The incremental cost (i.e., the cost difference) associated with using the new raw material versus the conventional/standard raw material should be included in **pollution abatement operating cost (materials and supplies)** for pollution prevention.
- A facility implements a new leak detection and repair (LDAR) program to reduce equipment leaks. The cost of the equipment associated with the LDAR program (e.g., pump seals, monitoring equipment, such as handheld organic vapor detectors) should be included in **pollution abatement capital expenditures** for pollution prevention. The costs associated with running the LDAR program (e.g., staff to monitor for leaks and prepare periodic reports) should be included in **pollution abatement operating costs (labor, energy, materials, contract work, depreciation)** for pollution prevention.

-
- A facility installs a new technology with the primary purpose of reducing the amount of air pollutants released per ton of product manufactured. The new technology requires more electricity and more staff time than the conventional technology. The costs associated with purchasing and installing the new technology should be included in **pollution abatement capital expenditures** for pollution prevention. Only the *additional* energy and labor costs (i.e., the incremental costs) of operating this new technology relative to the conventional technology should be included in **pollution abatement operating costs (labor, energy)** for pollution prevention.

Costs Not Included in Previous Items

Permits and Fees

- A facility undertakes a major expansion that triggers new environmental requirements. The fees associated with obtaining or updating its environmental permits from the state or federal government should be reported in **permits and fees**. The staff time spent on this permitting process should be reported in **pollution abatement operating costs (salaries, wages, and benefits)**, while any fees paid to consultants on this activity should be included in **pollution abatement operating costs (contract work, leasing, and other purchase services)**.

Site Cleanup

- A facility treats its contaminated soil via soil vapor extraction. For this purpose, it purchases a vacuum system and carbon treatment unit. The cost of this equipment should be included in **site cleanup capital expenditures**. The costs of operating this equipment, and the labor and materials necessary to conduct any testing and monitoring activities should be included in **site cleanup operating costs**.
- A facility hires a contractor to remove contaminated soil. The payments made to the contractor should be included in **site cleanup operating costs**.

Product Redesign

- A petroleum refinery changes its production process to allow it to produce low-sulfur diesel and gasoline fuels, which decrease the pollution emitted by motor vehicles. This change to the production process has no effect on the amount of pollution generated by the facility and therefore it is not considered a pollution abatement activity for the purposes of this survey. Instead, the facility's costs associated with this change should be reported in **product redesign capital expenditures** and **product redesign operating costs**.
- A manufacturer of surface coatings reformulates its coating products to reduce the amount of hazardous air pollutants (HAPs) they contain in order to help its customers comply with certain federal environmental regulations. While these new low-HAP coatings will reduce the air emissions in its customers' surface-coating operations, this product reformulation has no effect on the air emissions from its own facility and therefore is not considered a pollution abatement activity for the purposes of this survey. Instead, the facility's costs associated with this product reformulation should be reported in **product redesign capital expenditures** and **product redesign operating costs**.

Cost Offsets

- As an alternative to disposing used oil, a manufacturing plant has its used machinery oil picked up by a hazardous waste collection and treatment service. This service provider charges a fee. This fee should be reported in **pollution abatement operating costs (contract work)** for disposal (Item 4A4). The service provider returns the oil fully cleaned. Thus, the plant avoids having to buy new machinery oil. The value of the returned oil should be reported in **cost offsets**.
- A manufacturer purchases a cardboard baler to recycle cardboard containers associated with the manufacturing process. The capital expenditure should be reported in **pollution abatement capital expenditures** for recycling (Item 3A2). The costs associated with operating and maintaining the baler should be reported in **pollution abatement operating costs (labor, energy, materials, contract work, depreciation)** for recycling (Item 4). The manufacturer sells the cardboard to a recycler. The activity is not a potentially profit-making venture; it is conducted for pollution abatement. The revenues received from the recycler should be reported in **cost offsets**.
- A manufacturer installs a closed-cycle water recovery system in the production process to prevent the dumping of chemicals into the water system. Because the closed-cycle recovery system recaptures and reuses the chemicals in the production process, it reduces the expenses for these chemicals. The pollution abatement portion of the capital expenditure related to the closed-cycle recovery system should be reported in **pollution abatement capital expenditures** for pollution prevention (Item 3A4). The costs associated with operating and maintaining the system should be reported in **pollution abatement operating costs (labor, energy, materials, contract work, depreciation)** for pollution prevention (Item 4). The value of the recovered chemicals should be reported in **cost offsets**.

Contract work, leasing, and other purchased services includes payments made to private and public services providers for pollution abatement activities. This includes services provided both on-site and off-site, as well as leasing costs for capital equipment associated with pollution abatement activities.

<i>Include contract and purchased service costs for</i>	<i>Exclude contract and purchased services costs for</i>
<ul style="list-style-type: none">• Private contractor collection/disposal of waste created by the production process• Sewage or solid/contained waste collection/disposal paid to federal, state, or local governments• Contract management of on-site (industrial) landfill• Leasing of capital equipment such as excavators• Air emissions, water discharge testing services• Off-site laboratory analysis of water samples	<ul style="list-style-type: none">• Municipal waste disposal for office buildings or cafeteria trash and sanitary services• Research and development services

Note: The lists are intended as examples and are not inclusive.

Depreciation is related to capital expenditures but reported in a separate item in the survey. Depreciation and amortization charged during the year is attributed to the wear and tear on equipment or structures and obsolescence due to changing technology. Depreciation expense recorded on the survey is for all pollution abatement equipment operating in the facility in 2005, including equipment installed prior to and during 2005. This includes the depreciation against fixed assets acquired since the beginning of the year and those sold during the year or retired and no longer carried on the books at the end of the year. At the end of the expected life of the equipment or structure, the entire cost of the equipment or structure will have been depreciated.

4.4.2 Item 4B: Total Pollution Abatement Operating Costs

In **Item 4B**, provide an actual value or estimate of the total operating costs for pollution abatement in 2005.

4.4.3 Item 4C: Activity Categories

In **Item 4C**, total pollution abatement operating costs are divided into the four major activity categories defined in Section 3.1. Examples of pollution abatement operating costs to be included and excluded are provided below.

Activity Category	Examples of Pollution Abatement Operating Costs	Operating Costs to be Excluded
Treatment/capture	Operating and maintaining pollution treatment/capture equipment Incremental cost increase of operating the new or retrofit technology relative to conventional technology Fuel and utilities costs for operating pollution treatment/capture equipment Leasing of pollution treatment/capture equipment Cost for pollution treatment/capture equipment replacement and repair	Taxes, fines, legal fees, superfund taxes, environmental contribution or insurance
Recycling	Annual costs of on-site (postproduction process) and off-site recycling	Recycling for profitability reasons (not with the primary purpose of pollution abatement)
Disposal	Annual costs of on-site and off-site disposal Payments to a private or government contractor for solid waste disposal	Collection/disposal of office and cafeteria trash (if you can not separate from industrial, report the entire amount) Sanitary sewage (if you can not separate from industrial, report the entire amount)
Pollution Prevention	Cost of running leak detection programs Incremental cost associated with using new raw material versus the conventional/standard raw material Incremental cost associate with burning "cleaner fuel"	Use of a new raw material that reduces pollutants generated but is less expensive than previously used raw material

Note: The lists are intended as examples and are not inclusive.

Note: Testing and monitoring operating costs may be distributed across some or all of the activity categories listed above.

4.4.4 Item 4D: By Pollution Medium

In **Item 4D**, total pollution abatement operating costs are divided by media categories defined in Section 3.2. For operating costs that affect multiple media categories (such as both water and solids), partition the costs across individual categories as best as possible.

4.5 ITEM 5: COSTS NOT INCLUDED IN PREVIOUS ITEMS (PERMITS AND FEES, SITE CLEANUP, AND PRODUCT REDESIGN)

Costs not included in previous items include permits and fees, site cleanup, and product redesign expenditures.

In **Item 5A, permits and fees** include payments to local, state, and federal government agencies related to purchasing permits or paying fees associated with pollution abatement (e.g., Title V permit fees; emission fees). Tradable permits or emission credits are not included in this category. In addition, labor costs associated with permit preparation should be excluded; these costs are captured in operating costs salaries and wages and consultant fees should be included under operating costs contract work (see examples on page 19).

In **Item 5B, site cleanup** includes remediation of contamination due to leaks, spills, waste disposal, or other releases from current or past on-site production processes. Costs of site assessments, sampling, analysis, and other activities associated with the site should also be included. The pollution must be on the site of the facility named on the survey form (see examples on page 19).

In **Item 5C, product redesign** includes expenditures and costs of product redesign or reformulation intended to reduce the pollution generated by consumers or users from products manufactured at the facility. This is also referred to as downstream pollutants. For example in expenditures associated with reformulated gasoline and the reformulation of paint from oil to latex. In both cases, emissions from the consumers of the final products (gasoline and paint) are reduced. Product redesign to reduce pollution from the manufacturing process should be excluded; these costs are captured under pollution prevention (see examples on page 20).

4.6 ITEM 6: COST OFFSETS

Cost offsets are related to operating costs but reported in a separate item in the survey. Cost offsets are pollution abatement operating expenses recovered as a result or an offshoot of pollution abatement techniques. This is usually the value of recovered (recycled) materials or reduced energy. In addition, cost reductions from waste minimization for environmental protection and energy recovery for environmental protection are cost offsets. Cost offsets must be motivated by pollution abatement; cost reductions from energy-efficiency improvements or revenue from recycling activities that are profitable in the absence of environmental concerns are not to be included (see examples on page 20).

4.7 ITEM 7: BURDEN

Report the burden in terms of the number of hours it took to fill out the survey. Include the time for the lead contributors to complete the survey as well as staff at your facility who answered questions or looked up information.

4.8 ITEM 8: CERTIFICATION

Provide certification information on the person at the facility to contact regarding this report and name, title, and signature of a person who verified that the information reported in this survey is accurate to the best of your knowledge.

ADDITIONAL EXAMPLES

This section provides example activities and projects and indicates how they link to the definitions and the items in the survey form.

TREATMENT/CAPTURE

- A facility installs an electrostatic precipitator (ESP) to reduce particulate matter (PM) emissions from one of its process units. The facility also installs a continuous opacity monitoring system (COMS) at the outlet of the ESP to monitor opacity as a surrogate for PM emissions. The total capital expenditure on the ESP (including installation, fans, and ductwork, for example) and the COMS should be included in the **capital expenditures** for pollution treatment/capture. The costs associated with operating the ESP and the COMS (e.g., electricity costs to run the ESP and COMS and labor involved in collecting and reporting COMS data) should be included in the **operating costs** for pollution treatment/capture.
- A facility installs a new flotation clarifier as part of its on-site wastewater treatment unit. All capital expenditures associated with the purchase, installation, and start-up of the new clarifier should be included in the **capital expenditures** for pollution treatment/capture. All costs associated with operating the new clarifier (e.g., cost of electricity to run the compressor, cost of flocculating chemicals) plus the costs for operating the other wastewater treatment equipment should be included in the **operating costs** for pollution treatment/capture.
- A facility hires an environmental consulting company to conduct an emission source test to measure air pollutant emissions from the facility's control device. The contractor costs associated with conducting this source test should be included as **pollution abatement operating costs**. The labor costs for facility personnel to supervise and assist in conducting this source test should be included as **pollution abatement operating costs**.

RECYCLING

- A facility installs and operates equipment used to recycle former waste streams to comply with environmental regulations or for other environmental reasons. Costs associated with installing the equipment (e.g., purchased equipment, engineering, site preparation, installation, and other associated costs) should be included as **capital expenditures**. Costs associated with operating the equipment (e.g., cost of electricity, operating labor, and maintenance labor) should be included as **pollution abatement operating costs**.

DISPOSAL

- A facility constructs a new on-site landfill for disposing of solid waste. All costs associated with constructing the landfill (including the capital expenditures of equipment and machinery necessary for managing the landfill) should be included as **pollution abatement capital expenditures** for disposal.
- A facility generates solid waste from several sources including sludge from an on-site wastewater treatment operation and solid waste generated during the manufacturing process. All of the solid waste is sent to an on-site landfill operated by a contractor. The payments to the on-site contractor should be reported as **pollution abatement operating costs** under disposal.
- A facility hires an outside contractor to periodically pick up spent process catalyst for disposal. Contract fees for disposing of spent process catalyst should be included as **pollution abatement operating costs**.
- A facility pays its local government to accept wastewater, which is then sent to a public water treatment facility. The payments to government should be included as **pollution abatement operating costs**.

POLLUTION PREVENTION

- A facility switches to using a new, more expensive raw material that either contains fewer pollutants or releases fewer pollutants when used in the production process. The facility makes some slight modifications to the process to accommodate the use of the new raw material. The **capital expenditures** associated with the equipment modifications should be included in pollution prevention. The incremental cost increase associated with using the new raw material versus the conventional/standard raw material should be included as an **operating cost** for pollution prevention.
- A facility implements a new leak detection and repair (LDAR) program to reduce equipment leaks. The **capital expenditures** associated with the LDAR program (e.g., cost of equipment for leak prevention, such as pump seals, and the cost of leak monitoring equipment, such as handheld organic vapor detectors) should be included in pollution prevention. The **operating costs** associated with running the LDAR program (e.g., labor for staff to monitor for leaks and prepare periodic reports) should be included in pollution prevention.
- A facility installs a new technology for the primary purpose of reducing air pollutants released per ton of product manufactured. The new technology has slightly higher electricity and labor costs than the conventional technology. The **capital expenditures** associated with purchasing and installing the new technology should be included in the capital expenditures for pollution prevention. The incremental electricity and labor costs of operating the new technology relative to the conventional technology should be included in the **operating costs** for pollution prevention.

OTHER COSTS NOT INCLUDED IN PREVIOUS ITEMS

Permits and Fees

- A facility plans a major expansion that triggers new environmental requirements. Any fees associated with obtaining environmental permits from the state or federal government should be reported under **permits and fees** along with other annual payments such Title V permit fees. The staff time for related activities should be reported in **pollution abatement operating costs (salaries and wages)**, while any fees to consultants associated with environmental permitting activity should be in **pollution abatement operating costs (contract work, leasing, and other purchase services)**.

Site Cleanup

- A facility treats contaminated soil on-site via soil vapor extraction and, in the process, purchases a vacuum system and carbon treatment unit. The cost of the treatment equipment should be included in **site cleanup capital expenditures**. The cost to operate this equipment and labor and materials associated with conducting any follow-on soil testing and monitoring activities should also be included **site cleanup operating costs**.
- A facility hires a contractor to remove contaminated soil and pays the contractor rather than purchasing any cleanup equipment itself. In this cases, the payments made to the contractor should be considered **site cleanup operating costs**.

Product Redesign

- A facility that sells petroleum products changes its production process to generate low-sulfur diesel and gasoline fuels that decrease pollution expelled by motor vehicles. This change was made to meet the requirements of environmental regulations. The capital expenditures and operating costs associated with changing the production process for the new product specifications are considered product redesign that reduces the pollution generated by consumers or users of the products manufactured. These costs should be reported as **product redesign capital expenditures** and **product redesign operating costs**.

-
- A surface coatings manufacturer reformulates its product to reduce the amount of hazardous air pollutants (HAPs) contained in its coating product to help its customers comply with federal environmental regulations that require the use of low-HAP coatings in certain surface coating operations. This product reformulation does not reduce air emissions from the surface coatings manufacturing process; however, the use of the low-HAP coatings in its customers' surface coating operations will reduce air emissions from its customers' facilities. The capital expenditures and operating costs associated with reformulating the product should be considered product redesign. These costs should be reported as **product redesign capital expenditures** and **product redesign operating costs**.

COST OFFSETS

- As an environmental protection alternative to used oil disposal, a printing plant has used machinery oil picked up by a hazardous waste collection and treatment service. The service charges a fee. The fee is reported in disposal operating costs. The service returns the oil clean. Thus, the printer avoids buying new oil. The value of the oil is a **cost offset** to the service's fees.
- A manufacturer purchases a cardboard baler to recycle cardboard containers associated with the manufacturing process. The capital expenditure should be reported in recycling capital expenditures. The costs of operating the baler should be reported in recycling operating costs. The manufacturer sells the cardboard to a recycler. The activity is not a potentially profit-making venture; it is conducted for pollution abatement. The revenues received from the recycler are **cost offsets**.
- A manufacturer installs a closed-cycle recovery system in the production process to prevent the dumping of chemicals into the water system. Because the closed-cycle recovery system recaptures and reuses the chemicals in the production process, it reduced expenses for chemicals. The pollution abatement portion of the capital expenditure pertaining to the closed-cycle recovery system is reported in pollution prevention capital expenditures. The operating expenses to maintain the system are reported in pollution prevention operating costs. The value of the recovered chemicals is reported as a **cost offset**.

Appendix B.

Qualifications of the Data

SAMPLING ERRORS

The survey estimates presented in this report are subject to sampling errors. The panel for this survey was sampled using probabilities that varied depending on the size of the establishment. Independent samples were chosen for each North American Industry Classification System (NAICS) industry subject to the constraint that the overall sample size was fixed at about 20,000 establishments.

The particular sample selected was but one of many similar probability samples that could have resulted using this sampling methodology. Each of the possible samples would yield somewhat different sets of results. The sampling errors—the differences between the estimates obtained from the sample actually selected and the results theoretically obtainable from a comparable complete canvass of the same target universe—are unknown. However, the estimated standard errors of the survey estimates are guides to the potential size of the sampling error.

The estimated standard error of a survey estimate may be used to define a confidence interval about that estimate such that the complete coverage result will be included within that interval with known probability. As examples:

1. The interval defined by one standard error below the estimate to one standard error above contains the complete coverage result with approximately 67 percent confidence.
2. The interval defined by two standard errors below the estimate to two standard errors above contains the complete coverage result with approximately 95 percent confidence.
3. The interval defined by three standard errors below the estimate to three standard errors above contains the complete coverage result with approximately 99 percent confidence.

Thus, an inference that the complete coverage result lies within the indicated intervals would, with the prescribed confidence, be correct. For example, if an estimated total is 100 with an associated standard error of 5, there is approximately 67 percent confidence that the interval of 95–105 includes the complete coverage result, about 95 percent confidence that the interval of 90–110 included the complete coverage result and approximately 99 percent confidence that the interval of 85–115 includes the complete coverage result.

In the tables, only relative standard errors are presented. A relative standard error is the standard error of the estimate divided by the estimate multiplied by 100. Thus, to obtain the standard error, take the product of the relative standard error and the estimate.

NONSAMPLING ERRORS

Nonsampling errors include various response and operational errors; errors of collection, reporting, transcription, and bias due to nonresponse, etc. These errors would also occur if a complete canvass were conducted under the same conditions as this survey. Most of the important operational errors were detected and corrected in the course of the review of the data for reasonableness and consistency. Explicit measures of the nonsampling errors do provide a guide to the size of the sampling error. The total error most likely will exceed the standard error measures.

Although the survey respondents were provided detailed instructions for estimating pollution abatement costs and expenditures (see Appendix A), it is extremely difficult to translate the concept of pollution abatement activity into a working definition that is applicable to all industries and situations.

Appendix C.

Description of Survey Sample, Estimation Methodology, and Imputation Methodology

SURVEY SAMPLE

The 2005 estimates presented in this report are based on a newly selected probability sample comprised of approximately 20,000 establishments. The scope of the 2005 survey is defined as establishments with 20 or more employees classified within the Manufacturing sector, excluding Apparel Manufacturing (NAICS 315). Prior to the 2005 survey, the Pollution Abatement Costs and Expenditures (PACE) survey was last conducted for survey year 1999. The scope of the 2005 survey differs from the 1999 survey. In 1999, Apparel Manufacturing, the Minerals sector, and the Electric Power Generating industry were defined as in-scope. In addition, establishments with less than 20 employees were also in-scope. Consequently, comparisons to the 1999 survey estimates should be made with caution.

In the 1999 PACE survey, only half of the responding establishments reported pollution abatement activity (operating costs or capital expenditures). The lack of reported activity among establishments in the sample adversely impacted the reliability of the survey estimates. In response, the decision was made to mail a screener questionnaire prior to selecting the 2005 PACE sample. The primary goal of this screener was to determine if an establishment had any pollution abatement activities, and if so, the order of magnitude of these activities. In particular, each establishment was asked to check a box indicating a range for pollution abatement capital expenditures and for operating costs: \$1,000–\$25,000; \$25,000–\$100,000; or over \$100,000.

In general, two types of industries were targeted by the screener: 1) industries that had a high percentage of establishments reporting zero pollution abatement operating costs in 1994, and 2) industries that did not have a measure-of-size (MOS) (e.g., value of shipments, number of employees, etc.), which was highly correlated with pollution abatement operating costs. Within these industries, the screener targeted the larger establishments. Larger establishments are those with more significant MOS relative to other establishments in their respective industries. This was based on the assumption that larger establishments were more likely to have significant pollution abatement activities than smaller establishments. Industries already known to have significant pollution abatement activities were largely exempt from the screener. In the Spring of 2005, the PACE screener was mailed to approximately 29,000 establishments. Final response to the

screener was 69 percent. The information obtained from the screener was incorporated in the sample design for the 2005 PACE survey. For more details on the screener and sample design, please visit: <<http://yosemite.epa.gov/ee/epa/eed.nsf/Webpages/PACE2005.html>>.

In addition to the screener, a pilot survey instrument was mailed to approximately 2,100 establishments in July 2005. The primary purpose of this pilot survey was to evaluate whether there were any systematic issues with the survey instrument and/or the ability of establishments to respond; estimates would not be produced. Given this objective, establishments and industries with significant pollution abatement activity were purposely targeted—these industries were supplied by the EPA. In particular, nearly 80 percent of this sample was allotted to 86 6-digit NAICS industries in five sectors known to have major pollution abatement expenditures: Paper (NAICS 322), Petroleum (NAICS 324), Chemicals (NAICS 325), Primary Metals (NAICS 331), and Electric Power Generation (NAICS 22111). The final response rate for the pilot survey was 71 percent. The response data collected from the pilot survey were converted to screener check-box data for the sample selection operation.

The sample frame for the 2005 PACE survey was extracted from the 2004 Business Register. All active manufacturing establishments (excluding Apparel Manufacturing) with 20 or more employees in 2004 (or annual payroll in excess of \$1 million) were defined as eligible for the 2005 PACE survey. The approximately 106,000 establishments that satisfied these criteria comprised the sample frame.

The sample frame was partitioned into 412 nonoverlapping industry groups. Every establishment in the sample frame was assigned to one of these industry groups: 398 of these industry groups correspond to specific 6-digit NAICS industries, six correspond to 5-digit NAICS industries, and the remaining eight correspond to 4-digit NAICS industries.

Within each industry group, a probability-proportionate-to-size (PPS) sampling method was employed. Under this method, larger establishments are more likely to be selected for the survey than smaller establishments. This approach makes the assumption that larger establishments are more likely to have significant pollution abatement activities than smaller establishments. Each establishment was assigned a probability of selection for the PACE survey based on its relative importance within its

industry and the priority assigned to the industry by the EPA. The establishment's relative importance was determined by the nominal dollar value for an industry-specific MOS variable. The MOS variable differed across industries, but the annual value of shipments was used as the MOS for most industry groups. A minimum probability of .05 was imposed to guard against the risk associated with the large sample weights (the inverse of the probabilities of selection) being assigned to establishments believed to be small. If an establishment reported data far in excess of our expectations (based on its MOS), the combination of the large sample weight and the large data could adversely affect the survey estimates. It is important to note that the establishment probabilities reflect the establishment's importance within its industry and not across industries. Within an industry, establishments with the same MOS value have the same probability of selection. Establishments with the same MOS value, but classified in different industries, would most likely have different probabilities.

Establishments with response data from the screener and/or the pilot received special treatment. For the set of high priority industries, establishments with any pollution abatement activity (per the screener and/or the pilot) were selected for the 2005 PACE Survey with a probability of one. For the medium/low priority industries, only establishments with \$25,000 or more of pollution abatement activity (per the screener and/or the pilot) were included in the 2005 PACE survey with a probability of one. Collectively, these establishments are the units believed to be the most likely establishments to have significant pollution abatement activity. Sampling them, as opposed to including them with certainty, would introduce a degree of uncertainty in the survey estimates that could be avoided via full inclusion in the PACE survey. For the medium/low priority industries, screener respondents with pollution abatement activity between \$1,000 and \$25,000, were merged in the nonscreener/pilot population for sampling purposes. Their MOS value was adjusted upward by a factor of two prior to the assignment of the probabilities. A small sample of screener/pilot respondents, which indicated that they had no pollution abatement activity, was randomly selected to ensure representation of the screener respondents.

The sampling program used to select the 2005 PACE sample was a fixed sample size program. Fixed means that the expected sample size for every sampling stratum is exactly realized. The elimination of the variability associated with the sample size effectively removes a primary source of uncertainty from the survey estimates. Each of the 412 industry groups was sampled independently. Ultimately, a sample of 20,378 establishments was selected for the 2005 PACE survey.

ESTIMATION PROCEDURE

1. Weight Adjustment for Complete Nonrespondents

C-2 Pollution Abatement Costs and Expenditures: 2005

We accounted for complete nonresponse in the survey estimates by adjusting the original sample weights for response cases using nonresponse weight adjustment factors calculated at the sample control industry level, either the NAICS-6 or the NAICS-4 level. Typically, two factors were developed for each NAICS industry, one for certainty cases and one for noncertainty cases. For industries with no certainty cases, just one adjustment factor was calculated for the entire industry. The non-response weight adjustment factors were computed as the ratio of a weighted MOS variable summed across all sample cases in each NAICS industry to the same weighted MOS variable summed across reported cases only. The inverse of this ratio is a measure of the industry coverage provided by the respondents in terms of the specified MOS variable. Depending on the NAICS industry, the MOS variable used in the nonresponse weight adjustment was either total value of shipments, cost of fuels, or cost of materials.

2. Imputation of Partial Nonrespondents

When establishments reported data in either total capital expenditures or total operating costs and the detailed information was missing, the detailed information was imputed.

All imputation was calculated using weighted industry averages and applied at the NAICS-6 level. A ratio based on survey respondents for the missing item to the total was used. There had to be a minimum of three establishments with positive data for this ratio to be accepted. If not accepted, then weighted totals of detailed items were done at the NAICS-5 level. The "minimum three establishments" rule could be continued through the NAICS-4 level. If not accepted at the NAICS-4 level, we imputed at the NAICS-3 level. These ratios were then applied to the value for total capital expenditures or total operating costs to obtain imputed values.

There was also imputation of total pollution abatement operating costs in cases of item nonresponse and when a response was outside a probable range given the industry and size of the establishment. Imputed values were largely computed using an industry-level ratio of the weighted total pollution abatement operating costs for survey respondents to weighted total value of shipments. These ratios were then applied to the establishment's total value of shipments. The value of shipments was from the 2005 Annual Survey of Manufactures, the PACE survey itself, or the prior Census of Manufactures.

3. Calculation of Estimates and Relative Standard Errors

Each estimate for industry or geographic level j is of the following form:

$$\hat{Y}_j = \sum_{i \in j} w_i y_i$$

where w_i is the adjusted weight of the i^{th} establishment in level j , and y_i is the value of the variable of interest for the i^{th} establishment in level j . y_i could be either reported or imputed.

The relative standard error for

$$\hat{Y}_j$$

is calculated as

$$\text{RSE}(\hat{Y}) = \frac{\hat{\sigma}(\hat{Y})}{\hat{Y}_j}$$

where

$$\hat{\sigma}^2(\hat{Y}_j) = \sum_h \hat{\sigma}^2(\hat{Y}_{hj})$$

The term on the left is the variance of the estimated total, and each term in the summation on the right is the variance contribution of the h^{th} stratum to the overall variance where

$$\hat{\sigma}^2(\hat{Y}_{hj}) = \frac{n_h}{n_h - 1} \left[\sum_{i \in h \& j} (1 - \Pi_i)(w_i y_i)^2 - \frac{\left[\sum_{i \in h \& j} (1 - \Pi_i)(w_i y_i) \right]^2}{\sum_{i \in h \& j} (1 - \Pi_i)} \right]$$

In this formula, n_h is the sample size of stratum h and Π_i is the probability of selecting the i^{th} sampling unit, equal to the reciprocal of the original sampling weight.
